1. INTRODUCTION

This document describes the contents of the Understanding America Study's (UAS) Component Data File. The file was created at the University of Southern California (USC) by the Center for Economic and Social Research (CESR). Support for creating this data set is provided by the Social Security Administration (SSA) and the National Institute on Aging (NIA).

The UAS Component Data File (also referred to as simply the Component file) comprises online survey data collected by CESR through its UAS internet panel:

<https://uasdata.usc.edu/index.php>. For an overview of the UAS, please see the Introduction of the [UAS Comprehensive File Data Description](#). The Component file focuses on the income and wealth sections of the core Health and Retirement Study (HRS)¹ questionnaire, which is administered in the UAS in a total of six consecutive surveys (UAS 20 through UAS 25). The Component file is intended to be used as a supplemental data set to the Comprehensive file. A separate document describes the content of the Comprehensive file, which can be found [here](#).

Importantly, the Component file includes the income and wealth component variables that are used to calculate the income and wealth summary variables in the Comprehensive file. For example, the Component file contains the individual amounts (income from wages, second job, tips, and professional practice) for the earnings summary variable in the Comprehensive file. The Component file also contains survey-specific variables for several demographic and survey information items, such as marital status, level of education, and individual UAS survey timings. Survey timings refer to timestamp variables that indicate when the respondent began taking and completed each UAS HRS survey.

The data in the current Component file are from the first (Wave 1) fielding of the HRS instrument in the UAS, and are based on the 2014 (Wave 12) core HRS questionnaires. Since the Component file is intended to complement the UAS HRS income and wealth variables in the Comprehensive file, there are no variables that correspond to the other UAS surveys found in the Comprehensive file, referred to as "non-HRS data." Both the Comprehensive and Component data files can be found [here](#).

The variable naming structure in the Component file also differs from the Comprehensive file to identify from which UAS HRS survey each variable originated. Details of this naming structure are located in [Section 3.1](#) of this document.

The UAS Component Data File can be linked with any other UAS survey and with the UAS Comprehensive file. How to perform that linkage is described in [Section 2.5](#). An updated listing of all available UAS data sets is available on the [UAS All Surveys page](#).

¹ The core HRS refers to the questionnaires and survey that correspond to the HRS study administered by the University of Michigan.

Please send all questions about the data set or this data description to uas-l@mymaillists.usc.edu.

2. OVERVIEW OF THE UAS COMPONENT DATA FILE

2.1 UAS Input Files

The UAS Component Data File consists of survey responses from the UAS HRS Wave 1 study. The UAS HRS study is divided into six separate UAS surveys to reduce burden on the respondent on such a lengthy study. The section letters seen in Table 1 refer to the core HRS questionnaire sections.

Table 1 displays which UAS surveys correspond to each UAS study used to create the UAS Component Data File.

Table 1. UAS Surveys in the UAS Component File

UAS Study	UAS HRS Survey for Wave 1
UAS HRS Wave 1	UAS 20 Sections A-D UAS 21 Sections E-H UAS 22 Sections J-M UAS 23 Sections N-P UAS 24 Sections Q-R UAS 25 Sections S-W
My Household	Taken quarterly

The My Household survey is administered quarterly to all respondents. It collects responses for a series of key demographic items, which provide background information about the respondent and household. These variables include respondent age, ethnicity, education, marital status, work status, state of residence, and family structure among other matters. For detailed information about how the Component file uses My Household demographic data, please see [Section 3.4](#).

2.2 Survey Response Comparisons

Not every panel member participated in each of the six UAS HRS surveys listed in Table 1. In Table 2, the “Total” row gives the number of respondents that completed each survey. The other rows give the counts of the number of respondents common to all two-level combinations of UAS HRS surveys. For instance, the number of panel members who completed the UAS 20 survey and the UAS 21 survey is 6,697 out of a total of 6,963 respondents who completed the UAS 20 survey.

Respondents take UAS 20 through UAS 25 sequentially with the exception that respondents take UAS 24 before UAS 23. This is done because the content in surveys UAS 22 and UAS 24 are similar in that both focus on employment and earnings from that employment. Since there can be a time lag between when a respondent finishes one UAS HRS survey and begins the next, it was decided to decrease that lag so that the employment status information given in UAS 22 has a higher likelihood of being current when the respondent answers questions about income in UAS 24.

All of the data used to create the UAS Component Data File was downloaded from the UAS Survey Data Page on September 3rd, 2018. Since these surveys are still in the field, response numbers have most likely changed since the creation of the file. All future releases of the UAS Component Data File will include updated versions of each UAS survey data set.

Table 2. Respondents per Survey Combination

UAS HRS Survey	UAS 20	UAS 21	UAS 22	UAS 24	UAS 23	UAS 25
UAS 21	6,697					
UAS 22	6,469	6,469				
UAS 24	6,259	6,259	6,259			
UAS 23	6,051	6,051	6,051	6,051		
UAS 25	5,865	5,865	5,865	5,865	5,865	
Total*	6,963	6,697	6,469	6,259	6,051	5,865

* There are 5,865 panel members who have responded to all 6 UAS HRS surveys. "Total" row gives the number of respondents that completed each survey.

2.3 UAS Component Data File Format

The UAS Component Data File is available for download [here](#) from the UAS website in STATA or CSV format. The file is organized at the respondent-level, which is uniquely identified by the variable, uasid. If you would like the data in a different format, such as SAS, please email your request to uas-l@mymaillists.usc.edu.

2.4 Obtaining UAS Data

The data described in this document are based on UAS public data release files. These files are accessible through the [UAS All Surveys page](#).

Before using the data, one must first obtain permission from the UAS by [registering on the UAS site](#) to download the public release files. By registering with UAS one agrees to the “Conditions of Use” governing access and use of the data.

2.5 Merging with other UAS Data Sets

Each UAS file can be merged with other files using the unique person identifier variable, `uasid`. `uasid` is assigned to a respondent at recruitment into the UAS panel and stays fixed for each survey taken. Please use `uasid` to merge the UAS Component Data File with the UAS Comprehensive Data File and any other UAS survey file.

3. UAS COMPONENT FILE DESCRIPTION

The UAS Component File contains harmonized UAS HRS variables primarily focused on the income and wealth components. In addition, their corresponding income and wealth summary variable amounts are also included in the Component file. This is done as a convenience for users of the file. For the same reason, income and wealth variables that do not have any components associated with them are also included in the Component file (e.g. value of stocks).

Income and wealth imputation flags are included in the Component file for each component variable. The meaning of their values is consistent with those in the Comprehensive file. Additionally, ownership flag variables are included in the Component file. These are binary 0/1 variables that indicate whether an income type was received and whether a wealth asset is owned.

The file also contains survey-specific demographic and survey information variables that are discussed in [Section 3.4](#).

3.1 Variable Naming Structure

The naming convention of all variables in the UAS Component file is similar to the Comprehensive file except for one major difference (see Section 3.1.1 of the [Comprehensive File Data Description](#) for detailed information about variable naming). The Component file variables contain in their prefix an underscore and a numeric identifier that corresponds to the UAS HRS survey from which they originated. These identifiers are numbered one through six, and each represent UAS HRS surveys 20 through 25 respectively.

As an example, Table 3 demonstrates this naming convention for the Component file variables that represent marital status.

Table 3. Naming Convention for Variables in the UAS Component File (Shown for Marital Status)

UAS Component File Variable	UAS HRS Survey
r12_1mstat	UAS 20
r12_2mstat	UAS 21
r12_3mstat	UAS 22
r12_4mstat	UAS 23
r12_5mstat	UAS 24
r12_6mstat	UAS 25

This naming structure is especially useful for demographic variables because these values may change over time as the respondent takes each UAS HRS survey. In the UAS Comprehensive File, the most recent response from the quarterly-issued My Household survey is used to determine the value of each demographic variable.

Please see [Section 3.4](#) for more information about the demographic and survey information variables included in the Component file.

Specifically for income and wealth variables in the Component file, the character directly following the UAS survey identifier in the variable name is always either an “a” for wealth assets, or an “i” for an income item. If the variable is an imputation flag variable, the next character is an “f”. For wealth asset ownership/income received variables, the next character is an “o”. Examples of this structure are presented in the following sections.

3.2 Income Variables

The income-related variables in the UAS Component File consist of the various income components and their associated summary variables. [A list of all of these variables is presented in Appendix Table A.1.](#) Next, we show the components included in the Component file that are not found in the Comprehensive file, and how each relates to its summary variable. For income items that have a respondent and spouse variable, the respondent version is shown as an example, though each is computed identically.

- Respondent Earnings

The summary variable for this income amount is r12_5iearn. It is the sum of four income components:

1. Wages/salary – r12_5iwage
2. Tips, bonuses, and commissions – r12_5ibon
3. Second job earnings – r12_5i2nd

4. Professional practice or trade earnings – r12_5itrad

- Respondent Income from Employer Annuity

The summary variable for respondent income from employer annuity is r12_5iann. Its value is the sum of three income components: r12_5iann1, r12_5iann2, and r12_5iann3. The variable r12_5iann1 represents the income amount of the largest annuity, r12_5iann2 represents income from the second largest annuity, and r12_5iann3 is the income amount from any remaining annuities.

- Respondent Income from Employer Pension

The summary variable for respondent income from employer pension is r12_5ipen. Its value is the sum of three income components: r12_5ipen1, r12_5ipen2, and r12_5ipen3. The variable r12_5ipen1 represents the income amount of the largest pension, r12_5ipen2 represents income from the second largest pension, and r12_5ipen3 is the amount of any income from any remaining pensions.

- Household Capital Income

The summary variable household capital income, h12_5icap, has a value that is the sum of several income component variables.

1. Respondent and spouse self-employment income – r12_5isemp and s12_5isemp
2. Business income – h12_5ibusin
3. Rental income – h12_5irntin
4. Dividend income – h12_5idivin
5. Certificate of Deposit income – h12_5icdin
6. Checking/Savings interest income – h12_5ichkin
7. Bonds income – h12_5ibndin
8. Household income amount from other savings/assets – h12_5iothi1

When calculating h12_5icap, special attention is paid to avoid double counting component amounts representing the same income, such as self-employment income that was included in the business income amount.

- All Other Household Income

This summary variable, h12_5iothr, is the value of the sum of the income components:

1. Any income not already mentioned – h12_5iothi2
2. Lump sum amount variables h12_5iluyr1, h12_5iluyr2, h12_5iluyr3. Examples of the type of lump sum payments received are insurance settlements, pension settlements, inheritances, gifts, and lawsuits.

- Respondent Income from Other Government Transfers

The summary variable for respondent income from other government transfers is r12_5igxfr. Its value is the sum of the following income components:

1. Income from Veterans Benefits or Military Pension – r12_5ivet
2. Dollar value of food stamps/SNAP benefits received – h12_5ifood

3. Welfare income – h12_5iwelf

The values of h12_5ifood and h12_5iwelf that contribute to the total of r12_5igxfr depend on whether the respondent is married, and also who received the benefit (only respondent, only spouse, both).

- Respondent Income from Social Security Disability and SSI

The summary variable representing this amount is r12_5issdi. It is the sum of two separate social security benefit amounts:

1. Income from Social Security Disability (SSDI) – r12_5isdi
2. Supplemental Security Income (SSI) – r12_5issi

- Respondent Income from Social Security Retirement

The variable representing the value of income from Social Security retirement is r12_5isret. It is calculated by multiplying the Social Security retirement monthly amount variable, r12_5mss, and the number of months received variable, r12_5nss. Therefore, the value of r12_5isret represents the yearly amount received.

In addition to the Social Security retirement variable, r12_5isret, several other income variables have corresponding monthly amount and number of months received variables that are included in the Component file. There are also variables that represent whether the number of months a particular benefit was received was reported or not. Table 4 indicates which yearly income variables have monthly variables associated with them.

Table 4. Income Variables Reported at the Monthly Amount²

Yearly Income Amount	Monthly Income Amount	Number of Months Received	Whether Months Reported
r12_5isret	r12_5mss	r12_5nss	r12_5nfss
r12_5ipen1	r12_5mpen1	r12_5npen1	r12_5nfpen1
r12_5ipen2	r12_5mpen2	r12_5npen2	r12_5nfpen2
r12_5ipen3	r12_5mpen3	r12_5npen3	r12_5nfpen3
r12_5iann1	r12_5mann1	r12_5nann1	r12_5nfann1
r12_5iann2	r12_5mann2	r12_5nann2	r12_5nfann2
r12_5iann3	r12_5mann3	r12_5nann3	r12_5nfann3
r12_5ivet	r12_5mvet	r12_5nvet	r12_5nfvet
r12_5isdi	r12_5msdi	r12_5nsdi	r12_5nfsdi
h12_5issi	h12_5mssi	h12_5nssi	h12_5nfssi
h12_5ifood	h12_5mfood	h12_5nfood	h12_5nffood

All income-related amount variables in the Component file have an imputation flag and “if income received” variables associated with them. The imputation flag variables have the prefix r12_5if, s12_5if, or h12_5if depending on the reporting source of the variable (respondent, spouse, or household). Similarly, the income received variables have the prefix r12_5io, s12_5io, or h12_5io.

The rest of the income variables included in the Component file can also be found in the Comprehensive file. These variables have the same name except for the difference in variable prefix naming structure. For example, the value of respondent earnings is r12_5iearn in the Component file and r12iearn in the Comprehensive file.

3.3 Wealth Variables

The wealth-related variables in the UAS Component File include components of several summary variables that are found in the UAS Comprehensive File. [A list of all of these variables in presented in Appendix Table A.2.](#) All wealth assets are reported at the household level. These wealth components are related to the following assets:

- Net value of all IRA/401K accounts

² Each respondent-level variable in Table 4 has a spouse-level equivalent set of variables.

The summary variable for this wealth amount is h12_5aira. The components included in the Component file are h12_5aira1, h12_5aira2, and h12_5aira3, which are summed to create the value of h12_5aira. The variable h12_5aira1 is the amount of the largest IRA, h12_5aira2 is the amount of the next largest IRA, and h12_5aira3 is the amount of all remaining IRAs.

- Net value of primary residence

The summary variable for the value of the primary residence is h12_2ahous. The components are h12_2amobl (the net value of primary residence if it is a mobile home), and h12_2ahou1 (net value of primary residence if it is a house). Respondents may own a house or a mobile home as a primary residence or neither, but never both. Therefore, the value of h12_2ahous (and h12ahous in the Comprehensive File), is the value of the component the respondent owns or zero if neither is owned.

- Value of all mortgages on primary residence

The summary variable for the value of all mortgages on the primary residence is h12_2amort and its components are h12_2amrt1 and h12_2amrt2, which correspond to the value of the first and second mortgages on the residence. The components h12_2amrt1 and h12_2amrt2 are summed to create h12_2amort.

- Value of all other home loans on primary residence

The summary variable for the value of all other home loans is h12_2ahmln. Its components are h12_2aeqcd, the value of a line of equity credit, and h12_2aeqln, the value of any other home loan on the primary residence. These components are summed to create the value of h12_2ahmln.

Like the income amounts, all wealth-related amount variables in the Component file have imputation flag and ownership variables associated with them. The prefix for the wealth imputation flag variables are h12_2af or h12_5af depending on which UAS survey each originated. Likewise, the prefix for the wealth ownership variables is h12_2ao or h12_5ao.

Exclusively to the Component file, the wealth asset of trusts is included. Its associated variables are h12_5atrst, h12_5aotrst, and h12_5afrst, corresponding to the trust amount, ownership flag, and imputation flag, respectively.

The rest of the wealth variables included in the Component file can also be found in the Comprehensive file, after accounting for the difference in variable prefix naming structure. For example, the value of bonds is h12_5abond in the Component file and h12abond in the Comprehensive file.

3.4 Demographic and Survey Information Variables

Unlike the demographic and survey information variables contained in the UAS Comprehensive File, which take the most recent response value from the My Household survey, the UAS Component File has separate My Household survey variables for each of the six UAS HRS surveys (e.g., marital status, education level, state of residence, etc.). Additional survey information items are included in the Component file, namely, survey start and completion times, and a survey-specific household identifier. [A list of these variables is presented in Appendix table A.3.](#)

3.4.1 Demographic Variables

The demographic variables found in the Component file are the survey-specific versions of the singular, most recently answered versions in the Comprehensive file for the UAS HRS surveys. The naming structure for these variables is the same as the income and wealth variables. Since the UAS HRS surveys are taken sequentially, a non-blank value for a UAS 25 variable, r12_6educ for example, was given by the respondent more recently than its counterpart from UAS 20, r12_1educ.

Little variation is expected for some demographic variable values from survey to survey, though corrections and updates may occur. The generally stable variables are: respondent birth year, gender, race, and Hispanic origin.

A higher likelihood of survey-to-survey variation exists for the following demographic variables: respondent age, spouse age, highest level of education attained, marital status, state of residence, and whether the respondent lives with a partner.

3.4.2 Survey Information Variables

Similarly to the demographic variables in the Component file, the survey information variables are survey-specific versions of the condensed UAS Comprehensive File versions. These variables are UAS sample type (r12_Xsampletype³), the number of household members that are also UAS panel members (r12_Xuasmembers), whether a tablet was provided to the respondent (r12_Xtabletprovide), and the unique identifier of the household a UAS panel member belongs to in a given survey (r12_Xsurvhid). Detailed information for each of these variables can be found on the [UAS standard variables page](#).

Also included are the survey-specific start and end timings, also referred to as “timestamp” variables. Their values have the form: DD-Month-YY. They represent the month, day, and year each respondent began taking a UAS HRS survey, and when the respondent completed it (if it was completed).

The variables are represented as r12_Xstart and r12_Xend.

³ The X represents the values 1 through 6 which correspond to the UAS HRS survey numbers sequence 20 through 25.

If for a specific respondent the survey start variable is blank, then the respondent had not yet started that UAS HRS survey at the time the Component file was created. If the start time contains a value but the end time is blank, then the respondent started but did not complete the survey at the time of file creation. Future versions of the Component file will have updated timings information, if any, for each respondent in the file.

APPENDIX A. UAS HRS WAVE 1 COMPONENT FILE VARIABLES

Table A.1 Income Variables Included in the Component Data File from UAS HRS Wave 1

Variable Name	Variable Label
