1. INTRODUCTION

This document describes the UAS Monthly Events Panel Dataset, which was created at the University of Southern California's Center for Economic and Social Research (CESR) with data collected in the Understanding America Study (UAS). Support for this dataset is provided by the Social Security Administration and the National Institute on Aging.

The UAS is a nationally representative panel of American households randomly recruited through address-based sampling. Respondents are aged 18 and up, and they complete surveys, on average, once or twice monthly via an online interface that is technologically powerful, user-friendly, and quick to deliver results.

The Monthly Events Panel Dataset aggregates data from all waves of the UAS's Monthly Events project, which fields a survey at the start of each month to approximately 3,000 respondents aged 50 and up. Each Monthly Events survey asks respondents whether they experienced various life events in the preceding month, and asks for self-assessments of health, life satisfaction, pain, hours worked, earnings, employment changes, and medical expenditures during the previous month.

The Monthly Events Panel Dataset merges and organizes the data collected in these surveys, and derives 12 additional variables. It is updated monthly, with each new update adding the data collected in the most recently concluded Monthly Events survey. The month of this survey is referenced in the updated dataset's name (e.g., "events_panel_120.dta" when the most recently concluded survey was fielded in January 2020).

Please send all questions about the Monthly Events Panel Dataset or this data description to <u>uasl@mymaillists.usc.edu</u>.

2. OVERVIEW OF THE MONTHLY EVENTS PANEL DATASET

2.1 Input Files and Panel Dataset Structure

The first Monthly Events survey (UAS 102) was fielded in June of 2019 and asked about issues and events that took place in May 2019. This survey was Wave 1. The second survey, Wave 2, was fielded in July of 2019 and asked about issues and events in June. Subsequent waves follow the same pattern. Table 1 displays the months fielded and months of inquiry for the surveys contained in the current version of the Monthly Events Panel Dataset, as well as each survey's sample size, number of completes, and response rate.

Table 1. UAS Surveys in the Monthly Events Panel Dataset and their Response Rates

Wave	UAS Survey	Month Fielded	Month of Inquiry	Size of Sample	Number of Completes	Response Rate
1	UAS 102	Jun 2019	May 2019	3597	2912	80.96%
2	UAS 195	Jul 2019	Jun 2019	3572	2877	80.54%
3	UAS 198	Aug 2019	Jul 2019	3597	2863	79.59%
4	UAS 204	Sep 2019	Aug 2019	3597	2347	65.25%
5	UAS 205	Oct 2019	Sep 2019	3597	2849	79.20%
6	UAS 211	Nov 2019	Oct 2019	3597	1801	50.07%
7	UAS 215	Dec 2019	Nov 2019	3597	2801	77.87%
8	UAS 218	Jan 2020	Dec 2019	3597	2933	81.54%
9	UAS 222	Feb 2020	Jan 2020	3597	2843	79.04%
10	UAS 228	Mar 2020	Feb 2020	3581	3004	83.89%
11	UAS 232	Apr 2020	Mar 2020	3581	2977	83.13%
12	UAS 285	May 2020	Apr 2020	3581	2963	82.74%
13	UAS 291	Jun 2020	May 2020	3788	3060	80.78%
14	UAS 298	Jul 2020	Jun 2020	4609	3653	79.26%
15	UAS 305	Aug 2020	Jul 2020	4610	3646	79.09%
16	UAS 310	Sep 2020	Aug 2020	4610	3616	78.44%
17	UAS 316	Oct 2020	Sep 2020	4610	3576	77.57%
18	UAS 321	Nov 2020	Oct 2020	4610	3565	77.33%

19	UAS 329	Dec 2020	Nov 2020	4610	3503	75.99%
20	UAS 332	Jan 2021	Dec 2020	4610	3534	76.66%
21	UAS 336	Feb 2021	Jan 2021	5024	3846	75.55%
22	UAS 380	Mar 2021	Feb 2021	5024	3726	74.16%
23	UAS 384	Apr 2021	Mar 2021	5024	3662	72.89%
24	UAS 386	May 2021	Apr 2021	5024	3580	71.26%
25	UAS 391	Jun 2021	May 2021	5024	3590	71.46%
26	UAS 404	Jul 2021	Jun 2021	5024	3525	70.16%
27	UAS 406	Aug 2021	Jul 2021	5024	3457	68.81%
28	UAS 409	Sep 2021	Aug 2021	5024	3512	69.90%
29	UAS 416	Oct 2021	Sep 2021	5024	3524	70.14%
30	UAS 431	Nov 2021	Oct 2021	4299	3466	80.62%
31	UAS 433	Dec 2021	Nov 2021	4299	3355	78.04%
32	UAS 434	Jan 2022	Dec 2021	4299	3371	78.41%
33	UAS 440	Feb 2022	Jan 2022	4299	3406	79.23%
34	UAS 445	Mar 2022	Feb 2022	4173	3473	82.00%
35	UAS 456	Apr 2022	Mar 2022	4173	3367	80.69%
36	UAS 463	May 2022	Apr 2022	4173	3375	80.88%
37	UAS 469	Jun 2022	May 2022	4173	3263	78.19%
38	UAS 470	Jul 2022	Jun 2022	4900	3940	80.41%
39	UAS 477	Aug 2022	Jul 2022	4900	3900	79.59%
40	UAS 492	Sep 2022	Aug 2022	4933	4005	81.19%
41	UAS 495	Oct 2022	Sep 2022	4934	3969	80.44%
42	UAS 497	Nov 2022	Oct 2022	4934	3894	78.92%

5,405 respondents have completed at least one wave of the Monthly Events survey.

The dataset is structured as a panel where each row represents the responses of an individual (cross-sectional dimension) in a given wave (time dimension). Survey wave is uniquely identified by the variable *wave*, and individual respondents by their UAS identification code, *uasid*, as depicted in Table 2.

Table 2. Structure of the Monthly Events Panel Dataset (values are for example only)

uasid	wave	final_ weight	start_ month	start_ day	uas_ surv_num	le001 (illness or injury)	le011_1_ (date of most serious illness/injury)	le_earn_m_full (earnings)
000001	1	1.5001	6	3	102	2 No		1,050
000001	2	1.5001	7	2	195	2 No		1,100
000001	3	1.5001	8	1	198	1 Yes	2019-06-08	1,050
000001	4	1.5001	9	4	204	2 No		1,100
000001	5	1.5001	10	7	205	2 No		1,600
000002	1	2.1203	6	8	102	2 No		5,000
000002	2	2.1203	7	2	195	2 No		5,000
000002	3	2.1203	8	1	198	2 No		5,000
000002	4	2.1203	9	3	204	2 No		5,000
000002	5	2.1203	10	3	205	2 No		8,000

2.2 Missing Values

Many variables contain the missing value codes of .z, .a, .e, or .t. The .z code indicates that the pertinent variable was not fielded during the given record's survey wave. These are questions/variables that were added to the Monthly Events survey at some point after Wave 1.

The .a code indicates either [1] that the variable's question was displayed but not applicable because inconsistent with a response made on the same screen (for variables "le_hrs_oopb_na, "le_hrs_oopc_na," and "le_hrs_oopd_na") or, more typically, [2] that the variable's question was never displayed to the respondent due to questionnaire skip pattern logic or because the survey was not fully completed.

The .e missing code has two uses. [1] For those variables whose values were preloaded with data collected in an earlier Monthly Events survey wave (these are the variables with names that include either the prefix "uas" or the suffix "previous"), the .e code indicates that the value was missing in the original survey. [2] For all other variables, .e indicates that the respondent refused to answer a question, did not know the answer, or found the question or response option not applicable.

Finally, the missing value code .t indicates that the original value has been imputed to .t due to the possibility that a data quality issue caused this value to be either incorrect (when non-missing) or (when missing) incorrectly missing. These data issues are described in section 4.2 below.

2.3 Obtaining the Monthly Events Panel Dataset

The dataset is available for download in Stata format from the <u>UAS Monthly Events Panel Dataset</u> page at the UAS website. If you would like the data in a different format, such as SAS or csv, please email your request to <u>uas-I@mymaillists.usc.edu</u>. All data in the dataset have their origin in UAS public use files, which are accessible through the UAS All Surveys page.

Before accessing the Monthly Events Panel Dataset or other UAS data, one must first obtain permission by <u>registering on the UAS site</u> to download the UAS public release files. Registering with UAS is considered agreeing to the "conditions of use" governing access and usage of the data.

2.4 Merging with other UAS Datasets

The dataset can be linked with data from more than 400 UAS surveys (a listing of all available UAS surveys is found on the <u>UAS All Surveys page</u>). The Monthly Events Panel Dataset can also be linked with UAS special datasets such as the <u>UAS Comprehensive File</u> (the Comprehensive Files contains data from all UAS-core surveys, which are fielded bi-annually to all active UAS panelists).

Each UAS file can be merged with other UAS files using the unique person identifier *uasid*, which is discussed in <u>Section 3.1.1</u> in more detail. Most other UAS data files, including the raw datasets for each separate Monthly Events survey available on the <u>UAS All Surveys page</u>, are respondent-level with one record (row) per respondent. The Monthly Events Panel Dataset, however, is respondent*wave-level, with one record for each cross of respondent and wave. In other words, there is a separate row for each survey that each respondent in the panel completed. Consequently, joining the Monthly Events Panel Dataset with most other UAS files must be performed as a many-to-one merge.

Please send any questions about the data merging process or any other item related to the Monthly Events Panel Dataset to uas-l@mymaillists.usc.edu.

3. VARIABLES

The variables in the Monthly Events Panel Dataset are distinguished and organized in this document along two dimensions: source (whether the variable was downloaded or derived) and content.

The downloaded variables are the raw variables downloaded in the Monthly Events datasets found on the <u>UAS All Surveys page</u> and are either directly collected from the respondent or calculated by the survey software. Derived variables are calculated during the construction of the Monthly Events Panel Dataset and are discussed in Section 3.3.

The two content groups are [1] metadata and demographics variables (listed in <u>Appendix A.1</u> and described in <u>Section 3.1</u> and <u>Section 3.3.1</u>), and [2] monthly life events and issues variables (listed in <u>Appendix A.2</u> and described in <u>Section 3.2</u> and <u>Section 3.3.2</u>).

3.1 UAS Standard Variables (Metadata and Demographics)

Each UAS survey dataset contains a set of [a] default survey variables and [b] demographics variables that together are termed the UAS standard variables (see the <u>UAS standard variables</u> page for more).

3.1.1 Metadata (the UAS Default Survey Variables)

Most default survey variables represent when and how the survey was administered. Examples are times/dates when respondents began and completed the survey, whether the survey was administered in English or Spanish, sample weights, and whether a tablet was ever provided to the respondent.

Of particular note are three identifier variables. Each respondent is uniquely identified with *uasid*. This variable, assigned to a respondent at recruitment into the UAS panel, stays fixed across surveys and is the key for linking this dataset to any other UAS file. Households are identified with *uashhid* (original household identifier), which also stays fixed, and *survhhid* (survey-specific identifier), which uniquely identifies the household a panel member belongs to at the time of a given survey, and so can change for respondents when they move between different households.

Finally, five metadata variables (wave, uas_surv_num, yrmo_covered, yrmo_fielded, sampleinvite_wave, sampleinvite_surv, sampleinvite_yrmo, and n_co_for_r) were derived

specifically for the Monthly Events Panel Dataset and are described in more detail in <u>Section 3.3.1</u> below.

3.1.2 Demographic

The demographic variables found in the Monthly Events Panel Dataset include respondents' age, gender, ethnicity, marital status, family structure, state of residence, education, marital status, employment characteristics, and household composition, among other attributes. All demographic variables were collected in the My Household survey, which is administered quarterly to every respondent in the UAS panel, ensuring that these variables are regularly updated. The demographic variables are associated with each distinct Monthly Events survey according to the following rule: variable values collected in the My Household survey completed closest in time before a given Monthly Events survey is begun by a respondent are associated with that Monthly Events survey and added to its data.

3.2 Monthly Life Events and Life Issues Variables

The focal content of the Monthly Events surveys and Monthly Events Panel Dataset can be divided into two groups: monthly event question blocks, and other monthly issues.

3.2.1 Monthly Event Question Blocks

The Monthly Events surveys ask respondents whether they experienced each of a set of 17 events during the previous calendar month [event occurrence question]. If a respondent reports that the event did occur, he or she is asked one to three follow-up questions about that event. Thus, there are 17 blocks of questions, of size two to four, corresponding to each of the 17 events. All blocks include the event occurrence question and a follow-up question asking the respondent to provide the date when the event occurred or began [date question]. A subset of five events include a question asking for more detail about the nature of the event [nature of event question].

Finally, for a partially overlapping subset of 12 events, a follow-up is asked whenever the respondent reported experiencing the event both in the current survey wave, with event occurrence last month, and the previous wave, with event occurrence two months ago. Respondents here are asked to confirm that their affirmative responses for experiencing the event in both waves are based on distinct instances of the event [confirm both waves question]. For example, if a respondent reports suffering a financial setback in the current wave and reported the same in the previous wave, a follow-up question is displayed asking this respondent to confirm

that there were two distinct financial setbacks, and if not, in which of the two waves the setback first occurred.

While the question structures across these 17 blocks are similar, the order of presentation can be dissimilar. Moreover, questions within a single block are sometimes presented in completely different sections of the survey. For more on question order, please refer to a Monthly Event survey's documentation, accessible from the <u>UAS All Surveys page</u>.

Respondents are asked about the following 17 events (variables within each event's question block are listed in the subsequent parentheses):

- Illness or injury (event occurrence: *le001*, nature of event: *le_hrs001a*, date: *le011_1_*, confirm that event was experienced in both waves: *le001 followup*)
- Close relative with illness or injury (occurrence: *le002*, nature of event: *le_hrs001a_rel*, date: *le011 2*, confirm both waves: *le002 followup*)
- Marriage (occurrence: le012, date: le011_12_)
- New partnership (occurrence: le015, date: le011 15)
- Death of someone close (occurrence: *le003*, date: *le011_3_*, confirm both waves: *le003 followup*)
- Positive change in financial situation (occurrence: *le013*, nature of event: *le013_2*, date: *le011_13*, confirm both waves: *le013_followup*)
- Financial setback (occurrence: *le009*, nature of event: *le009_2*, date: *le011_9_*, confirm both waves: *le009_followup*)
- Onset of marital difficulties (occurrence: le004, date: le011 4)
- Onset of difficulties with close friend or relative (occurrence: *le005*, date: *le011_5_*, confirm both waves: *le005* followup)
- Taking a special vacation (occurrence: *le014*, date: *le011_14_*, confirm both waves: *le014 followup*)
- Retirement (occurrence: le007, date: le011_7_, confirm both waves: le007_followup)
- Decision about retirement (occurrence: le008, date: le011 8)
- Unemployment (occurrence: le006, date: le011 6, confirm both waves: le006 followup)
- Employed but with change in employment status (occurrence: *le_hrs_ia*, nature of event: *le hrs ib*, date: *le011 11*)

- Moving to new neighborhood (occurrence: *le016*, date: *le011_16_*, confirm both waves: *le016_followup*)
- Onset of major legal problems (occurrence: *le010*, date: *le011_10_*, confirm both waves: *le010_followup*)
- Birth of grandchild (occurrence: *le017*, date: *le011_17_*, confirm both waves: *le017 followup*)

3.2.2 Other Monthly Issues

The Monthly Events surveys ask respondents to evaluate and describe a few additional life circumstances during the previous month using questions not structured along the above event question block pattern. The raw and derived variables based on these additional questions can be grouped into the following seven monthly issues (the variables for each issue are listed in the subsequent parentheses):

- Life satisfaction (*le_hrs_s1*)
- Overall health (*le_hrs_srh1*)
- Employment changes (*le_hrs_ia*, *le_hrs_ib*)
- Hours worked during the last week of the month (*le_hrs_day1-le_hrs_day7*, *le_hrs_ic_total*, *le_hrs_hb_hours*, *le_hrs_hc*, *le_tothours*)
- Earnings (le hrs id weekly, le hrs id biweekly, le hrs id, le earn m full)
- Medical expenditures (*le_hrs_oopa1*, *le_hrs_oopa2*, *le_hrs_oopb*, *le_hrs_oopb*, *le_hrs_oopd*, *oop_doc*, *oop_dent*, *oop_othmed*)
- Pain and use of pain medication (le hrs p1, le hrs p2, le hrs p3, le hrs p4)

Five of these variables are derived (*le_tothours*, *le_earn_m_full*, *oop_hosp*, *oop_doc*, *oop_dent*, *oop_othmed*) and are described in more detail in <u>Section 3.3.2</u> below.

3.3 Derived Variables

Most variables contained in the Monthly Events Panel Dataset are exactly the same as they appear in the raw datasets (referred to as the downloaded group in this document). This section describes the derived variables that were constructed specifically for the Monthly Events Panel Dataset. They can be grouped along the variable content distinction used to separate Section 3.1 from Section 3.2: demographic/metadata variables vs. monthly life events/issues variables. Or to be more specific, all derived variables are either metadata or within the other monthly issues group.

3.3.1 Metadata and Demographic

Short descriptions of the metadata and demographic variables derived for the Monthly Events Panel Dataset are the following:

- wave: Sequential index for each distinct Monthly Events survey. Wave 1 corresponds to the first Monthly Events survey, UAS 102, which was fielded in June of 2019 and asks about issues and events happening in May of 2019. Wave 2 corresponds to the survey fielded the following month in July of 2019, Wave 3 to the survey fielded in August 2019, and so on.
- uas_surv_num: Identifier for each distinct survey in the UAS, it indexes where each wave of the Monthly Events survey can be found within the <u>All Surveys page</u> on the UAS website. It is the number of the UAS survey under which a given wave's documentation and raw data are located.
- *yrmo_covered*: Time period (year and month) to which the survey in the observation refers.
- yrmo fielded: Time period (year and month) when the survey was fielded.
- sampleinvite wave: Wave when respondent first entered the sample.
- sampleinvite surv: First survey that respondent was invited to participate in.
- *sampleinvite_yrmo*: Time period (year and month) when respondent first entered the sample.
- *n_co_for_r*: Number of Monthly Events survey waves completed by this respondent.
- *final_weight*: Respondent-level weight calculated to make the Monthly Events Panel Dataset representative of the national population above aged 50 and up (see <u>Section 5</u> below).

3.3.2 Other Monthly Issues

Short descriptions of the other monthly issue variables derived for the Monthly Events Panel Dataset are the following:

• *le_tothours*: Total hours worked in a typical or average week. Respondents were asked how many hours they worked each day of the previous week (variables *le_hrs_ic_day1-le_hrs_ic_day7*). The total hours worked in the previous week were calculated by summing the values *le_hrs_ic_day1-le_hrs_ic_day7* and storing the result in *le_hrs_ic_total*. If respondents also reported that the hours worked during this reference week was the typical amount, then the value for *le_tothours* is derived by assigning it the value of *le_hrs_ic_total*.

However, if respondents reported that the total hours worked during this reference week was not typical and entered an alternative value for typical weekly hours worked, then this value (in variable $le_hrs_hb_hours$) was assigned to $le_tothours$. If respondents also declined to enter a typical weekly total, instead reporting that the number of hours worked varied greatly from week to week, they were asked to estimate how many hours per week they work on average and this value (le_hrs_hc) was assigned to $le_tothours$.

- *le_earn_m_full*: Monthly earnings. Respondents were asked to provide the amount they earned, that is, their take-home pay, in the previous month (variable *le_hrs_id*). However, some respondents reported that they weren't paid monthly, but on a biweekly or shorter pay period, or by the job.
 - For these respondents we asked for the amount they earned during their previous pay period or, if the pay period was daily or by the job, during the previous week. These biweekly and weekly earnings were then multiplied by the appropriate factor to produce a per month value. For respondents who reported a biweekly amount, their biweekly earnings (reported in variable <code>le_hrs_id_biweekly</code>) were multiplied by 2.1 to produce the per month value in <code>le_earn_m_full</code>. For respondents paid weekly, daily, or by the job, their weekly earnings (<code>le_hrs_id_weekly</code>) were multiplied by 4.2 to produce the per month amount. Finally, if this monthly amount was greater than or equal to \$50,000 and less than \$999,999, it was imputed to \$50,000. Monthly amounts greater than or equal to \$999,999 are extremely unlikely, so any values this high were assumed to be erroneous and were imputed to missing.
- oop_hosp: Amount paid out-of-pocket for hospital stays. Respondents were presented with an entry question (le_hrs_oop1) asking whether or not they incurred hospital stay or outpatient procedure expenses in the last month. If they reported they did not, then the value of oop_hosp was set to 0. If they reported they did incur such expenses, then the value of oop_hosp was set to the value of the follow-up question (variable le_hrs_oopa2) that asks how much respondents paid last month for hospital bills.
- oop_doc: Amount paid out-of-pocket for doctor/clinic visits. Respondents were asked to report how much they paid last month for doctor or clinic visits (stored in variable le_hrs_oopb), along with a response option to select when did not make any payments (le_hrs_oopb_na). If they selected the no-payment option, then the value of oop_doc was set to 0. If they instead entered a value in le_hrs_oopb, then oop_doc was set to this value.
- *oop_dent*: Amount paid out-of-pocket for dental visits. Respondents were asked to report how much they paid last month for dental visits (stored in variable *le hrs oopc*), or to

- select a response option indicating they did not make any payments (*le_hrs_oopc_na*). If they selected the no-payment option, then the value of *oop_dent* was set to 0. If they instead entered a value in *le_hrs_oopc*, then *oop_dent* was set to this value.
- oop_othmed: Amount paid out-of-pocket for other medical visits. Respondents were asked to report (in variable <code>le_hrs_oopd</code>) how much they paid last month for medical expenses not yet mentioned, that is, expenses in addition to hospital stays, doctor/clinic visits, and dental visits. Some examples of these other expenses are medications, special food, equipment such as a special bed or chair, and visits by health professionals. Also included was a response option to indicate they did not make any of these payments (stored in <code>le_hrs_oopd_na</code>). If they selected the no-payment option, then the value of <code>oop_othmed</code> was set to 0. If they instead entered a value in <code>le_hrs_oopd</code>, then <code>oop_othmed</code> was set to this value.

4. UPDATES AND DATA ISSUES IN EACH SURVEY WAVE

Monthly updates to the dataset and monthly data quality issues are listed in the tables 3 and 4 below.

4.1 Monthly Updates

Though most of the content in the Monthly Events surveys has remained fixed since Wave 1, there have been a few changes--mainly adding new questions and adding response options to existing questions. As a result, a few of the variables are present only for the most recent waves. Table 3 below describes these changes.

Table 3. Changes made to the Monthly Events survey and Monthly Events Panel Dataset

Wave	Survey	Changes				
2	UAS 195	 Variable le013_2 was added, along with its multiple response options: le013_2s1-le013_2s18. This is a follow-up asked when respondents report experiencing a positive change in their financial situation. It requests more information about the nature of this positive change. Change to le_hrs_ib. Four new response options were added to this question about change in employment status: I got a raise, I started an additional job, I stopped working, I am on leave from work. Variable le009_2 was added, along with its multiple response options le009_2s1-le009_2s16. This is a follow-up asked when respondents report suffering a major financial setback. It requests more information about the nature of this setback. 				
5	UAS 205	 Variable le_hrs001a_rel was added, along with its multiple response options le_hrs001a_rels1-le_hrs001a_rels22. This is a follow-up asked when respondents report that a close relative experienced the onset of an illness or injury. It requests more information about the nature of this illness/injury. Change to le_hrs001a. A text box was added for use by those who respond "other" to a question requesting more information about the nature of an illness/injury that was experienced. 				
6	UAS 211	Variables le001_followup, le002_followup, le003_followup, le005_followup, le006_followup, le007_followup, le009_followup, le010_followup, le013_followup, le014_followup, le016_followup, and le017_followup were added. Follow-ups that are asked when respondents report experiencing any of these 12 events in both the current wave (occurrence last month) and previous wave (occurrence two months ago). Respondents are asked to confirm that their				

		affirmative responses for both waves are based on distinct instances of the event.
11	UAS 232	 Change to le_hrs001a. Two new response options were added, asking whether Respondents had been told that they had contracted COVID-19 or had been diagnosed with it. Change to le_hrs001a_rel. Two new response options were added, asking whether Respondents had any close relatives who had been told that they had contracted COVID-19 or had been diagnosed with it. Change to LE013_2. Two new response options were added, asking whether Respondents had received higher than expected government benefits and whether they had received non-government financial help from outside their household.

4.2 Data Issues

Data quality issues during data collection and actions taken are listed in Table 4 below.

In January 2020, the change in calendar year created a problem in the date displayed for three sets of questions: the date of the week displayed in the questions about hours worked (see row 1 in Table 4), the dates bounding the last two-week period for the question asking those respondents on a biweekly pay period what income they earned during this period (row 2), and the month in the disambiguation question for respondents who reported the same event in the two previous months (row 3). These problems were detected and solved one day after the launch of the January survey and hence only a subset of respondents was affected. A special missing value (.t) was given for these answers as described in Table 4 below.

Table 4. Data Issues in Monthly Events Panel Dataset

Wave	Survey	Variable(s) Affected	Issue	Action
8	UAS 218	le_hrs_ic_day1 - le_hrs_ic_day7, le_hrs_ic_total	1,212 Respondents were asked to report how many hours they worked each day of the previous week. Of these, 493 were correctly shown Dec. 23 for the previous week's Monday, but then incorrectly shown Dec 29 -Jan. 3 for that week's Tuesday - Sunday. The values in the affected variables for these Respondents were imputed to a special missing value. The remaining Respondents viewed the correct dates.	imputed to missing value: .t
8	UAS 218	le_hrs_id_biweekly	575 Respondents stated they were paid biweekly and were asked to report their income during the last two-week period. For those taking the survey during its first fielded week, the correct dates circumscribed the previous two concluded weeks: Dec. 16 - Dec. 29. However, 214	imputed to missing value: .t

		le001_followup, le002_followup,	Respondents were shown incorrect dates for this period, instead viewing dates circumscribing the ongoing week plus the previous week, which was Dec 21 - Jan. 3. The values of <i>le_hrs_id_biweekly</i> for these 214 Respondents were imputed to a special missing value. All other Respondents viewed the correct two-week period. 208 Respondents reported experiencing an instance of at least one of a set of twelve events both during December (reported in UAS 218) and during November (reported in	imputed to missing value: .t
8	UAS 218	le003_followup, le005_followup, le006_followup, le007_followup, le009_followup, le010_followup, le013_followup, le014_followup, le016_followup, le017_followup	previous Monthly Events survey, UAS 215). These Respondents were then asked to confirm that they experienced two distinct episodes of this event during these two consecutive months. However, for 106 Respondents the two months were incorrectly displayed as December and December. The values in the affected variables for these Respondents were imputed to a special missing value. The remaining Respondents were shown the correctly shown November and December for the two months.	
28	UAS 409	le_hrs_hb, le_hrs_hc	67 Respondents who should have been presented question le_hrs_hb were not. Since le_hrs_hc is shown when $le_hrs_hb = 3$, some of these Respondents possibly incorrectly missed viewing question le_hrs_hc as well.	imputed to missing value: .t
29	UAS 416	le_hrs_hb, le_hrs_hc	71 Respondents who should have been presented question le_hrs_hb were not. Since le_hrs_hc is shown when $le_hrs_hb = 3$, some of these Respondents possibly incorrectly missed viewing question le_hrs_hc as well.	imputed to missing value: .t
30	UAS 431	le_hrs_hb, le_hrs_hc	41 Respondents who should have been presented question le_hrs_hb were not. Since le_hrs_hc is shown when $le_hrs_hb = 3$, some of these Respondents possibly incorrectly missed viewing question le_hrs_hc as well.	imputed to missing value: .t

5. SAMPLE WEIGHTS

The Monthly Events Panel Dataset includes a weight variable *final_weight* to correct for differential nonresponse rates across demographic groups and align the sample to the U.S. adult population along key demographic variables: gender, race/ethnicity, age, education and census region. This variable is constant by respondent across waves. A complete description of the UAS weighting procedure can be found <a href="https://example.com/here/examp

Values used to generate the sample weights are taken from the demographic variables collected in the My Household survey and associated with each wave of the Monthly Events survey (see Section 3.1.2 for more details). More specifically, the most recently collected, non-missing values for each pertinent demographic variable are used.
