

CESR Data User news & updates

2021 | Q1 March

News from the Understanding Coronavirus in America Tracking Survey (UCA)

In February, UCA changed to monthly, rather than bi-weekly, administration

Biweekly national data collection began April 1 2020 and encompassed waves 2-23. We moved to monthly participation in February 17 2021 (wave 24+), to allow data collection to continue through July.

Data, toplines, questionnaires and more information available at [UCA's home](#) on the CESR website. UCA Tracking graphs [updated daily](#)

LABarometer is a quarterly, internet-based survey of approximately 1,800 Los Angeles County residents. The survey monitors conditions and attitudes in Los Angeles, with a focus on four key issues: livability, mobility, sustainability & resilience, affordability & prosperity.

UAS Data Usage Stats*

*Since UAS Redesign - July 2017

A cumulative report of use of UAS data files available for download by registered users.

LABarometer is a quarterly, internet-based survey of L.A. County residents

designed to monitor social conditions, with a focus on four key issues: Livability; Mobility; Sustainability & resilience; and Affordability & prosperity.

The team recently released data and key findings from their Affordability & Prosperity survey, bringing Wave 1 of the 10-year survey effort to a close. All data reports, press releases, and datasets from Wave 1 are now available online. Wave 2 of the Livability Survey will be released in early April.

Number of active data users	1085
Survey data sets	5034
Non-response files	480
Timings data files	304
Platform data files	229
Survey codebook downloads	56947
Zip files (HRS or Election data)	968
Question cart data sets	48
Recruitment, behavior, attrition	69
Newsletter	3079
AAPOR recruitment rates files	6815
Covid-19 Longitudinal Data File	1204
Covid-19 Individual Data Sets	1851
Covid-19 Contextual Data Sets	245
User data sets (researcher produced)	167

The UAS Comprehensive Data File includes merged data from HRS questionnaires and UAS surveys. Harmonized, cleaned and available to link to other UAS data.

Other CESR and UAS News

The UAS Panel is continuing to grow

UAS now has more than 9000 active panel members, including representative sub-panels of more than 3200 Californians and includes more than 2000 residents of Los Angeles County.

If you missed our 2021 CIPHER conference, check out videos and slides online

Our third Current Innovations in Probability-based Household Internet Panel Research (CIPHER) conference took place on Thursday, 4 March and Friday, 5 March 2021. Visit the CIPHER site for the list of presentations, along with slides and videos.

The Covid-19 Tracking Survey has completed 24 waves since March 10, 2020.

An average of more than 6200 UAS members participate in each wave. We ask about 18 minutes of core questions, with additional one-time and repeated modules. More than 300 research teams are working with the tracking survey data, and we are aware of nearly 500 media, and trade journal publications, along with more than 50 journal articles. As the pandemic winds down, we will continue to track the impact on people's lives. Visit our tracking graphics at Covid19Pulse.usc.edu , where we have recently added graphs from our K-12 data collection, and vaccine uptake and hesitancy.

We continue to offer free data housing service to survey authors

In support of open-science data transparency, and due to an increasing number of journals that require published manuscripts to make their data available for replication, we are offering a new free service to UAS survey authors. We will house your published analytic data files, or create fully de-identified files that you may house elsewhere.

**Please remember to acknowledge UAS as the source in all publications based on UAS Data,
and send us your citations to add to our list!**

General UAS data

The project described in this paper relies on data from survey(s) administered by the Understanding America Study (UAS) which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC, CESR, or UAS.

UAS Covid Data

The project described in this paper relies on data from survey(s) administered by the Understanding America Study, which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC or UAS. The collection of the UAS COVID-19 tracking data is supported in part by the Bill & Melinda Gates Foundation and by grant U01AG054580 from the National Institute on Aging, and many others.
