Contents

1 INTRODUCTION

This UAS panel survey, titled "UAS 62: 2016 Survey of Consumer Payment Choice", asks respondents about their adoption and usage of payment methods. This survey is part of a study that took place during the fall of 2016. It focuses on how consumers buy goods and services and pay bills, using cash, bank accounts, and other means of payment. The survey covers numerous aspects of payment preference, from security, ease, and acceptance. Participants also filled out diary entries of daily spending in UAS 63. This survey is no longer in the field. Respondents were paid $20 to complete the survey.

Consent for participation in this survey/diary project was obtained in UAS 64. Related surveys in this project are UAS 28, 29, 31, 34 (2015) and UAS 62-64 (2016).

1.1 Topics

This survey contains questions (among others) on the following topics: Consumer Behavior. A complete survey topic categorization for the UAS can be found here.

1.2 Experiments

This survey includes experiment(s) of the following type(s): Auxiliary Randomization. Please refer to explanatory comments in the Routing section for detailed information. A complete survey experiment categorization for the UAS can be found here.

1.3 Citation

Each publication, press release or other document that cites results from this survey must include an acknowledgment of UAS as the data source and a disclaimer such as, 'The project described in this paper relies on data from survey(s) administered by the Understanding America Study, which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC or UAS.' For any questions or more information about the UAS, contact Tania Gutsche, Project and Panel Manager, Center for Economic and Social Research, University of Southern California, at tgutsche@usc.edu.

2 SURVEY RESPONSE AND DATA

2.1 Sample selection and response rate

The sample selection for this survey was:

All active respondents who gave consent to participate in the Boston Federal Bank SCPC/Diary 2016 project in UAS64.

As such, this survey was made available to 3464 UAS participants. Of those 3464 participants, 3384 completed the survey and are counted as respondents. Of those who are not counted as respondents, 19 started the survey without completing and 61 did not start the survey. The overall response rate was 97.69%.

Note: We are unable to provide sample weights for a small number of UAS members (see the Sample weighting section below for details). If they completed the survey, these members are included in the data set with a weight of zero, but accounted for in the computation of total sample size and survey response rate.%.

The detailed survey response rate is as follows:

UAS62 - Response Overview	
Size of selected sample	3464
Completed the survey	3384
Started but did not complete the survey	19
Did not start the survey	61
Response rate	97.69%

2.2 Timings

The survey took respondents an average of 40 minutes, and the full distribution of survey response times is available in the figure below. Times per question are available upon request.

Distribution of Respondents' Survey Response Times
2.3 Sample & Weighting

Weights are included in the data set for this survey. This survey dataset may contain respondents with a weight of zero. These respondents belong to a small group of UAS members for whom sample weights cannot be computed due to non-probability recruitment for special projects. Hence, while they are accounted for in the total number of survey respondents, they do not contribute to any statistics using sample weights. For more details on the UAS weighing procedures please refer to the UAS Weighting Procedures V1. Please contact UAS staff with any questions.

3   STANDARD VARIABLES

Each Understanding America Study data contains a series of standard variables, consisting of individual, household and sample identifiers, language indicator, time stamps and a rating by the respondent of how much he or she liked the survey:

○ **uasid**: the identifier of the respondent. This identifier is assigned to a respondent at recruitment and stays with the respondent throughout each and every survey he/she participates in. When analyzing data from multiple surveys, the 'uasid' can be used to merge data sets.

○ **uashhid**: the household identifier of the respondent. Every member is assigned a household identifier, stored in the variable 'uashhid'. For the primary respondent this identifier equals his or her 'uasid'. All other eligible members of the primary respondent's household (everyone who is 18 or older in the household) who become UAS respondents receive the 'uasid' of the primary respondent as their household identifier. The identifier 'uashhid' remains constant over time for all respondents. Thus it is always possible to find the original UAS household of an UAS panel member (even after they, for example, have moved out to form another household).

○ **survhhid**: uniquely identifies the household a UAS panel member belongs to in a given survey. For instance, if the primary respondent and his/her spouse are both UAS members at the time of a given survey, they both receive the same 'survhhid' identifier for that survey. If they subsequently split, they receive two different 'survhhid' in subsequent surveys. They, however, always share the same 'uashhid'. The identifier 'survhhid' is set to missing (.) if no other household members are UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart if the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, household members have different 'survhhid' reflecting different household compositions at the time they answered the survey. For instance, suppose that the primary respondent and his/her spouse are both UAS members. If the primary respondent answers the survey when he/she is living with the spouse, but the spouse answers the survey when the couple has split, they receive different 'survhhid'. Hence, the variable 'survhhid' identifies household membership of UAS panel members, at the time the respondent answers the survey. Note: in the My Household survey 'survhhid' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.

○ **uasmembers**: is the number of other household members who are also UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart is the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, the primary respondent of a household has a value of '0', whereas the second UAS household respondent has a value of '1'. Therefore 'uasmembers' should be interpreted as the

number of household and UAS panel members at the time the respondent answers the survey. Note: in the My Household survey 'uasmembers' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.

○ **sampleframe**: indicates the sampling frame from which the household of the respondent was recruited. All UAS recruitment is done through address based sampling (ABS) in which samples are acquired based on postal records. Currently, the variable 'sampleframe' takes on four values reflecting four distinct sample frames used by the UAS over the year (in future data sets the number of sample frames used for recruitment may increase if additional specific populations are targeted in future recruitment batches):

1. U.S. National Territory: recruited through ABS within the entire U.S.
2. Areas high concentration Nat Ame: recruited through ABS in areas with a high concentration of Native Americans in the zip-code. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
3. Los Angeles County: recruited through ABS within Los Angeles County.
4. California: recruited through ABS within California.

Note: prior to March 6, 2024 this variable was called sampletype and had the following value labels for the above list in UAS data sets:

1. Nationally Representative Sample: recruited through ABS within the entire U.S.
2. Native Americans: recruited through ABS in areas with a high concentration of Native Americans. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
3. LA County: recruited through ABS within Los Angeles County.
4. California: recruited through ABS within California.

○ **batch**: indicates the batch from which the respondent was recruited. Currently, this variable takes the following values (in future data sets the number of batches may increase as new recruitment batches are added to the UAS):

1. ASDE 2014/01
2. ASDE 2014/01
3. ASDE 2014/01

○ **primary_respondent**: indicates if the respondent was the first person within the household (i.e. to become a member or whether s/he was added as a subsequent member. A household in this regard is broadly defined as anyone living together with the primary respondent. That is, a household comprises individuals who live together, e.g. as part of a family relationship (like a spouse/child/parent) or in context of some other relationship (like a roommate or tenant).

○ **hardware**: indicates whether the respondent ever received hardware or not. Note: this variable should not be used to determine whether a respondent received hardware at a given point in time and/or whether s/he used the hardware to participate in a survey. Rather, it indicates whether hardware was ever provided:

1. None
2. Tablet (includes Internet)

○ **language**: the language in which the survey was conducted. This variable takes a value of 1 for English and a value of 2 for Spanish.

○ **start date (start year, start month, start day, start hour, start min, start sec)**: indicates the time at which the respondent started the survey.

○ **end date (end year, end month, end day, end hour, end min, end sec)**: indicates the time at which the respondent completed the survey.

○ **cs 001**: indicates how interesting the respondent found the survey.

4 BACKGROUND DEMOGRAPHICS

Every UAS survey data set includes demographic variables, which provide background information about the respondent and his/her household. Demographic information such as age, ethnicity, education, marital status, work status, state of residence, family structure is elicited every quarter through the "My Household" survey. The demographic variables provided with each survey are taken from the most recent 'MyHousehold' survey answered by the respondent. If at the time of a survey, the information in "My Household" is more than three months old, a respondent is required to check and update his or her information before being able to take the survey.

The following variables are available in each survey data set:

- **gender**: the gender of the respondent.

- **dateofbirth_year**: the year of birth of the respondent.

- **age**: the age of the respondent at the start of the survey.

- **agerange**: if the respondent's age cannot be calculate due to missing information, 'agerange' indicates the approximate age. Should a value for both the 'age' and 'agerange' be present, then 'age' takes precedence over 'agerange'.

- **citizenus**: indicates whether the respondent is a U.S. citizen.

- **bornus**: indicates whether the respondent was born in the U.S.

- **stateborn**: indicates the state in which the respondent was born. This is set to missing (.) if the respondent was not born in the U.S.

- **countryborn**: indicates the country in which the respondent was born. This is set to missing (.) if the respondent was born in the U.S.

- **countryborn_other**: indicates the country of birth if that country is not on the drop down list of countries shown to the respondent'.

- **statereside**: the state in which the respondent is living.

- **immigration_status**: indicates whether the respondent is an immigrant. It takes one of the following values: 0 Non-immigrant, 1 First generation immigrant (immigrant who migrated to the U.S), 2 Second generation immigrant (U.S.-born children of at least one foreign-born parent), 3 Third generation immigrant (U.S.-born children of at least one U.S.-born parent, where at least one grandparent is foreign-born), or 4 Unknown immigrant status.

- **maritalstatus**: the marital status of the respondent.

- **livewithpartner**: indicates whether the respondent lives with a partner.

11

- **education**: the highest level of education attained by the respondent.

- **hisplatino**: indicates whether the respondent identifies him or herself as being Hispanic or Latino. This variable is asked separately from race.

- **hisplatinogroup**: indicates which Hispanic or Latino group a respondent identifies him or herself with. This is set to missing (.) if the respondent does not identify him or herself as being Hispanic or Latino.

- **white**: indicates whether the respondent identifies him or herself as white (Caucasian).

- **black**: indicates whether the respondent identifies him or herself as black (African-American).

- **nativeamer**: indicates whether the respondent identifies him or herself as Native American (American Indian or Alaska Native).

- **asian**: indicates whether the respondent identifies him or herself as Asian (Asian-American).

- **pacific**: indicates whether the respondent identifies him or herself as Native Hawaiian or Other Pacific Islander.

- **race**: indicates the race of the respondent as singular (e.g., '1 White' or '2 Black') or as mixed (in case the respondent identifies with two or more races). The value '6 Mixed' that the respondent answered 'Yes' to at least two of the single race categories. This variable is generated based on the values of the different race variables (white, black, nativeamer, asian, pacific). This composite measure is not conditional on hisplatino, so an individual may identify as Hispanic or Latino, and also as a member of one or more racial groups.

- **working**: indicates whether the respondent is working for pay.

- **sick_leave**: indicates whether the respondent is not working because sick or on leave.

- **unemp_layoff**: indicates whether the respondent is unemployed or on lay off.

- **unemp_look**: indicates whether the respondent is unemployed and looking for a job.

- **retired**: indicates whether the respondent is retired.

- **disabled**: indicates whether the respondent has a disability.

- **lf_other**: specifies other labor force status.

- **laborstatus**: indicates the labor force status of the respondent as singular (e.g., '1 Working for pay' or '2 On sick or other leave') or as mixed (in case the respondent selects two or more labor statuses). The value '8 Mixed' indicates that the respondent answered 'Yes' to at least two of the single labor force status variables. This variable is generated based on the values of the different labor status variables (working, sick_leave, unempl_layoff, unempl_look, retired, disabled, lf_other).

- **employmenttype**: indicates the employment type of the respondent (employed by the government, by a private company, a nonprofit organization, or self-employed). This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.

- **workfullpart**: indicates whether the respondent works full or part-time. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.

- **hourswork**: indicates the number of hours the respondent works per week. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.

- **hhincome**: is the total combined income of all members of the respondent's household (living in their household) during the past 12 months.

- **anyhhmember**: indicates whether there were any members in the respondent's household at the time he/she answered the survey as reported by the respondent.

- **hhmembernumber**: indicates the number of household members in the respondent's household at the time of the survey as reported by the respondent. It may be that 'anyhhmember' is 'Yes', but 'hhmembernumber' is missing if the respondent did not provide the number of household members at the time of the survey.

- **hhmemberin_#**: indicates whether a household member is currently in the household as reported by the respondent. Household members are never removed from the stored household roster and their information is always included in survey data sets. The order of the roster is the same order in which household members were specified by the respondent in the 'MyHousehold' survey. The order is identified by the suffix _# (e.g., _1 indicates the first household member, _2 the second household member, etc.).

  As an example, if the first household member is in the household at the time of the survey, 'hhmemberin_1' is set to '1 HH Member 1 is in the HH'; if he/she has moved out, 'hhmemberin_1' is set to '0 HH member 1 is no longer in the HH'. Since information of other household members (stored in the variables listed below) is always included in survey data sets, information about 'hhmemberin_1' is available whether this person is still in the household or has moved out.

- **hhmembergen_#**: indicates the gender of another household member as reported by the respondent.

- **hhmemberage_#**: indicates the age of another household member. The age is derived from the month and year of birth of the household member as reported by the respondent.

- **hhmemberrel_#**: indicates the relationship of the respondent to the other household member as reported by the respondent.

○ **hhmemberuasid␣#**: is the 'uasid' of the other household member if this person is also a UAS panel member. It is set to missing (.) if this person is not a UAS panel member at the time of the survey. Since this identifier is directly reported by the respondent (chosen from a preloaded list), it may differ from the actual (correct) 'uasid' of the UAS member it refers to because of reporting error. Also, this variable should not be used to identify UAS members in a given household at the time of the survey. This is because the variables 'hhmemberuasid␣#' are taken from the most recent 'My Household' and changes in household composition involving UAS members may have occurred between the time of the respondent answered 'My Household' and the time the respondent answers the survey. To follow UAS members of a given household, it is advised to use the identifiers 'uashhid' and 'survhhid'.

○ **lastmyhh␣date**: the date on which the demographics variables were collected through the 'My Household' survey.

5   MISSING DATA CONVENTIONS

Data files provide so-called clean data, that is, answers given to questions that are not applicable anymore at survey completion (for example because a respondent went back in the survey and skipped over a previously answered question) are treated as if the questions were never asked. In the data files all questions that were asked, but not answered by the respondent are marked with (.e). All questions never seen by the respondent (or any dirty data) are marked with (.a). The latter may mean that a respondent did not view the question because s/he skipped over it; or alternatively that s/he never reached that question due to a break off. If a respondent did not complete a survey, the variables representing survey end date and time are marked with (.c). Household member variables are marked with (.m) if the respondent has less household members (e.g. if the number of household members is 2, any variables for household member 3 and up are marked with (.m).

UAS provides data in STATA and CSV format. Stata data sets come with include variable labels that are not available in the CSV files. Value labels are provided for single-response answer option. In STATA these labels will include the labels 'Not asked' and 'Not answered' for (.a) and (.e), and will show in tabulations such as 'tab q1, missing'. For multiple-response questions a binary variable is created for each answer option indicating whether the option was selected or not. A summary variable is also provided in string format reflecting which options were selected and in which order. For example, if a question asked about favorite animals with options cat, dog, and horse, then if a respondent selected horse and then cat, the binary variables for horse and cat will be set to yes, while the overall variable would have a string value of '3-1'. If no answer was given, all binary variables and the summary variable will be marked with '.e'.

Questions that are asked multiple times are often implemented as so-called array questions. Supposing the name of such question was Q1 and it was asked in 6 different instances, your data set would contain the variables Q1_1_ to Q1_6_. To illustrate, if a survey asked the names of all children, then child_1_ would contain the name of the first child the respondent named and so on.

More information about the UAS data in general can be found on the UAS Data Pages web site.

6   ROUTING SYNTAX

The survey with routing presented in the next section includes all of the questions that make up this survey, the question answers when choices were provided, and the question routing. The routing includes descriptions of when questions are grouped, conditional logic that determines when questions are presented to the respondent, randomization of questions and answers, and fills of answers from one question to another.

If you are unfamiliar with conditional logic statements, they are typically formatted so that **if** the respondent fulfills some condition (e.g. they have a cellphone or a checking account), **then** they are presented with some other question or the value of some variable is changed. If the respondent does not fulfill the condition (e.g. they are not a cellphone adopter or they do not have a checking account), something **else** happens such as skipping the next question or changing the variable to some other value. Some of the logic involved in the randomization of questions or answers being presented to the respondent is quite complex, and in these instances there is documentation to clarify the process being represented by the routing.

Because logic syntax standards vary, here is a brief introduction to our syntax standards. The syntax used in the conditional statements is as follows: '=' is equal to, '<' is less than, '>' is greater than, and '!=' is used for does not equal. When a variable is set to some number N, the statement looks like 'variable := N'.

The formatting of the questions and routing are designed to make it easier to interpret what is occurring at any given point in the survey. Question ID is the bold text at the top of a question block, followed by the question text and the answer selections. When a question or variable has associated data, the name links to the appropriate data page, so you can easily get directly to the data. Text color is used to indicate the routing: red is conditional logic, gold is question grouping, green is looping, and orange is used to document randomization and other complex conditional logic processes. The routing is written for a computer to parse rather than a human to read, so when the routing diverges significantly from what is displayed to the respondent, a screenshot of what the respondent saw is included.

The name of the randomization variables are defined in proximity to where they are put into play, and like the question ID the names of the randomization variables can be used to link directly to the associated data page.

7 SURVEY WITH ROUTING

intro (intro in section Demographics)
Thank you for taking this survey. We are studying how consumers buy goods and services using cash, bank accounts, and other means of payment for all purchases and bill payments.

At any time in this survey, it is OK to refer to your financial records if you wish.

Click on any blue word to see its definition.

Try to answer **all** questions the best you can, even if:

You are unsure of your answer.You do not have or use the payment method.

/* There are two aspects of the following questions that are randomized, the order of the six assessment characteristics (Security (1), Acceptance (2), Cost (3), Convenience (4), Getting setting up (5), and Payment Records (6)) and the order of the payment instrument groups. The payment instruments are randomized by the following three groups, and within each payment instrument group, there is no randomization:

1 Paper – Cash (a), Check (b), money order (h),
2 Card - Debit card (c), Credit card (d), Prepaid card (e), and
3 Electronic - Bank account number (f), Online banking bill pay (g).
*/

AS001_intro (intro in section Paymentmethods)
Next we are going to ask you about several common methods for making payments. Please review the definitions below before moving on.

textbfElectronic payment instruments
Bank account numberA payment made by providing your bank account number to a business, organization, or person, such as an insurance or utility company. You can give your number on websites, paper forms, etc.Online banking bill payA payment made from your bank's online banking website, usually for a bill but it can be used to pay other people too. This payment does not require you or your bank to disclose your bank account number to

a third party.

Card payment instruments

Debit cardA card that deducts directly from your bank account.Credit cardA card that allows the cardholder to make a purchase that will be paid back to the credit card company later.Prepaid cardA card that has money stored or loaded onto it. Also known as stored value cards or gift cards.

Paper payment instruments

CashCoins and paper bills.CheckA piece of paper directing a financial institution to pay a specific amount of money to a person or business.Money orderA type of payment that can be purchased from a bank or other institution and allows the individual named on the order to receive a specified amount of cash on demand.

For each question, please rate the characteristics of **all** payment methods, even if you do not have or use all of them.

IF FLAS003AddRandom = EMPTY THEN

FLAS003AddRandom := mt_rand(1,6)

/* Randomly sets the group order variable **FLAS003AddRandom**, please consult this value to determine the order of the groups of answers that are defined in the loop below. */

END OF IF

/* An array of six numbers is constructed to randomly assigns assessment characteristic order. To see which assessment characteristic is in which position, please consult the permAS003 variables below. */

IF sizeof(AS003_order) = 0 THEN

AS003_order := shuffleArray(array(1,2,3,4,5,6))
permAS003_1 := AS003_order(1)
permAS003_2 := AS003_order(2)
permAS003_3 := AS003_order(3)
permAS003_4 := AS003_order(4)
permAS003_5 := AS003_order(5)
permAS003_6 := AS003_order(6)

END OF IF

LOOP FROM 1 TO 6

/* This process sets out the order of the instruments presented to the subject, based on which random group order variable is randomly assigned in **FLAS003AddRandom**, above. This randomization of payment instrument group applies across all 6 assessment characteristic questions. For instance, if the order of the payment instrument groups is 3, 1, 2, then it will be that same order for all six assessment characteristics. The randomizer takes the following values:

1=1,2,3
2=1,3,2
3=2,1,3
4=2,3,1
5=3,1,2
6=3,2,1

The groups themselves are as follows:

Group 1: AS003a, AS003b, AS003h
Group 2: AS003c, AS003d, AS003e
Group 3: AS003f, AS003g

These questions correspond to the following payment methods:

AS003a: Cash
AS003b: Check
AS003c: Debit card
AS003d: Credit card
AS003e: Prepaid card
AS003f: Bank account number
AS003g: Online banking bill pay
AS003h: Money order

The questions come in different instances demarcated by for example _1. These suffixes indicate the payment method characteristic:

AS003a_1: Accepted. Answer options: 1 Rarely accepted, 2 Occasionally accepted, 3 Often accepted, 4 Usually accepted, 5 Almost always accepted
AS003a_2: Cost. Answer options: 1 Very high cost, 2 High cost, 3 Neither high nor low cost, 4 Low cost, 5 Very low cost
AS003a_3: Convenience. Answer options: 1 Very inconvenient, 2 Inconvenient, 3 Neither inconvenient nor convenient, 4 Convenient, 5 Very convenient
AS003a_4: Security. Answer options: 1 Very risky, 2 Risky, 3 Neither risky nor secure, 4 Secure, 5 Very secure
AS003a_5: Setting up. Answer options: 1 Very hard to get or set up, 2 Hard to get or set up, 3 Neither hard nor easy, 4 Easy to get or set up, 5 Very easy to get or set up
AS003a_6: Quality of records. Answer options: 1 Very poor records, 2 Poor records, 3 Neither good nor poor, 4 Good records, 5 Very good records

*/

NEWTB (EVER SET UP ACCESS TO TELEPHONE BANKING in section Paymentadoption)
Telephone banking is when you access your account by calling a phone number that your bank has provided. You interact with the system using either voice commands, your phone's numeric keypad, or speaking with a live customer service representative.

To **set up access** to telephone banking, you may need to create a password or PIN.

Have you ever **set up** access to **telephone banking**?
1 Yes
2 No

NEWOB (EVER SET UP ACCESS TO ONLINE BANKING in section Paymentadoption)
Online banking is a method of accessing a bank account via the website of a bank, to perform such actions as viewing account balances, making transfers between accounts, or paying bills electronically.

In order to **set up access** to your bank's online banking website, you usually have to set up a username, password, site key, or PIN.

Have you **ever** set up access to **online banking**?
1 Yes
2 No

IF NEWOB = YES THEN
  NEWOBBP (EVER SET UP ONLINE BANKING BILL PAYMENT in section Paymentadoption)
  You can use your bank's website to make electronic payments from your bank account to a merchant, company, government, or private individual.

  To do so, you would need to set up online bill pay by entering the name, ad-

dress, and account number of the company or person to whom you are paying a bill.

Have you **ever** set up **online bill pay** at your bank's website?

PU001_intro (Section Paymentuse)
Now we will ask questions about how often you use the payment methods you have.

If you are married or living with a partner, please report all payments made by you or made jointly with your spouse or partner.Do not include payments made......only by your spouse or partner...for business purposes onlyIt is OK to refer to your records to get an accurate count of the number of payments you made.

PU002_intro (Section Paymentuse)
The next set of questions will be divided into several types of payments:

Categorize each payment you make into one of the categories below. We'll ask you about each type of payment next.

BILLS & RELATED PAYMENTS Automatic paymentsPayments set up to occur on a regularly scheduled basis to the same company or person. These include bills, subscriptions and debt payments.Online bill paymentsPayments made online for bills, subscriptions or debt payments, but not set up to be paid automatically.Bill payments by mail, in person, or by phonePayments for bills, subscriptions, or debt payments that you mail in, pay in person, or call on your phone.

PURCHASES OF GOODS & SERVICES Online paymentsPayments for items bought over the internet or donations made online.Retail purchases of goodsPurchases of goods at stores, such as: grocery stores, superstores, department stores, drug stores.ServicesPurchases of services, such as: restaurants, bars, fast food and beverage, transportation and tolls, doctor's visits, child care, haircuts, education, recreation and entertainment.Person-to-person paymentsPayments to people not made through a retail establishment, such as

payments for allowances, paying back a friend, or gifts to other people.
