# 1 INTRODUCTION

This UAS panel survey, titled "UAS 634: Caregiver Survey", asks respondents who are caregivers (as indicated in UAS 641) about how they are feeling and doing. UAS respondents who are eligible and decide to participate may be asked to participate in a project over a one-year period to understand even more about the impacts of caregiving on their life. This survey is no longer in the field.

## 1.1 Topics

This survey contains questions (among others) on the following topics: Health, Social Networks, Subjective Well-being. A complete survey topic categorization for the UAS can be found here.

## 1.2 Experiments

This survey did not include any experiments. A complete survey experiment categorization for the UAS can be found here.

#### 1.3 Citation

Each publication, press release or other document that cites results from this survey must include an acknowledgment of UAS as the data source and a disclaimer such as, 'The project described in this paper relies on data from survey(s) administered by the Understanding America Study, which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC or UAS.' For any questions or more information about the UAS, contact Tania Gutsche, Project and Panel Manager, Center for Economic and Social Research, University of Southern California, at tgutsche@usc.edu.

# 2 SURVEY RESPONSE AND DATA

# 2.1 Sample selection and response rate

The sample selection for this survey was:

All active respondents who indicated they are a caregiver in UAS 641.

As such, this survey was made available to 2473 UAS participants. Of those 2473 participants, 2337 completed the survey and are counted as respondents. Of those who are not counted as respondents, 73 started the survey without completing and 63 did not start the survey. The overall response rate was 94.5%.

Note: We are unable to provide sample weights for a small number of UAS members (see the Sample and weighting section below for details). If they completed the survey, these members are included in the data set with a weight of zero, but accounted for in the computation of total sample size and survey response rate.%.

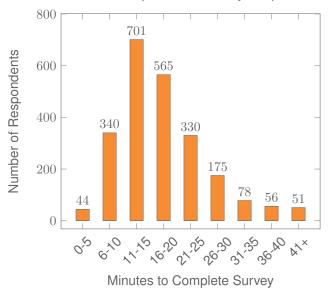

The detailed survey response rate is as follows:

UAS634 - Response Overview			
Size of selected sample	2473		
Completed the survey	2337		
Started but did not complete the survey	73		
Did not start the survey	63		
Response rate	94.5%		

# 2.2 Timings

The survey took respondents an average of 18 minutes, and the full distribution of survey response times is available in the figure below. Times per question are available upon request.

2.3 Sample & Weighting

Sample weights for this survey are computed following the general UAS Weighting Procedure. Specifically, we use a two-step process where we first compute base weights, which correct for unequal probabilities of sampling UAS members, and then generate final, post-stratification weights, which align the sample to the reference population along certain socio-economic dimensions. These are gender (male/female), race and ethnicity (White/Black/Other/Hispanic/Native American), age (18-39/40-49/50/59/60+), education (High school or less/Some college/Bachelor or more), Census regions (Northeast/Midwest//West, excl. CA/CA, excl. LAC, LAC). Benchmark distributions for these variables are derived from the 6 most recent available Current Population Survey (CPS) Basic Monthly Survey with respect to the survey's completion date. The reference population considered for the weights is the U.S. population of adults age 18 and older.

This survey dataset may contain respondents with a weight of zero. These respondents belong to a small group of UAS members for whom sample weights cannot be computed due to non-probability recruitment for special projects. Hence, while they are accounted for in the total number of survey respondents, they do not contribute to any statistics using sample weights. More information is available from the UAS Weighting Procedure. Please contact UAS staff with any questions.

# 3 STANDARD VARIABLES

Each Understanding America Study data set contains a series of standard variables, consisting of individual, household and sample identifiers, language indicator, time stamps and a rating by the respondent of how much he or she liked the survey. These variables are based on the questions asked quarterly in the My Household survey after the application of a cleaning process (https://uasdata.usc.edu/page/Data+Cleaning+Process). They are the following:

- uasid: the identifier of the respondent. This identifier is assigned to a respondent at recruitment and stays with the respondent throughout each and every survey he/she participates in. When analyzing data from multiple surveys, the 'uasid' can be used to merge data sets.
- uashhid: the household identifier of the respondent. Every member is assigned a household identifier, stored in the variable ¡em¿uashhid¡/em¿. For the primary respondent this identifier is his or her 'uasid'. All other eligible members of the primary respondent's household (everyone who is 18 or older in the household) who become UAS respondents receive the uasid of the primary respondent as their household identifier. The uashhid remains constant over time for all respondents. Thus it is always possible to find the original UAS household of an UAS panel member (even after they, for example, have moved out to form another household).
- uashhid\_current: the current household identifier of the respondent. Uniquely identifies the household a UAS panel member belongs to in a given survey INDEPENDENT of the exact composition of the household in terms of who else in the household are UAS members. Missing (.n) for respondents who are in a single-UAS member household. Available on request in data sets prior to September 3, 2025.
- **survhhid**: uniquely identifies the household a UAS panel member belongs to in a given survey DEPENDENT on the exact composition of the household in terms of who else in the household are UAS members. Is set to missing (.n) if no other household members are UAS panel members at the time of the survey. Is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.
- o uasmembers: is the number of other household members who are also UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart is the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, the primary respondent of a household has a value of '0', whereas the second UAS household respondent has a value of '1'. Therefore 'uasmembers' should be interpreted as the number of household and UAS panel members at the time the respondent answers the survey. Note: in the My Household survey 'uasmembers' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.

- sampleframe: indicates the sampling frame from which the household of the respondent was recruited. All UAS recruitment is done through address based sampling (ABS) in which samples are acquired based on postal records. Currently, the variable 'sampleframe' takes on four values reflecting four distinct sample frames used by the UAS over the year (in future data sets the number of sample frames used for recruitment may increase if additional specific populations are targeted in future recruitment batches):
  - 1. U.S. National Territory: recruited through ABS within the entire U.S.
  - 2. Areas high concentration Nat Ame: recruited through ABS in areas with a high concentration of Native Americans in the zip-code. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
  - 3. Los Angeles County: recruited through ABS within Los Angeles County.
  - 4. California: recruited through ABS within California.

Note: prior to March 6, 2024 this variable was called sampletype and had the following value labels for the above list in UAS data sets:

- 1. Nationally Representative Sample: recruited through ABS within the entire U.S.
- 2. Native Americans: recruited through ABS in areas with a high concentration of Native Americans. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
- 3. LA County: recruited through ABS within Los Angeles County.
- 4. California: recruited through ABS within California.
- batch: indicates the batch from which the respondent was recruited. Currently, this
  variable takes the following values (in future data sets the number of batches may
  increase as new recruitment batches are added to the UAS):
  - 1. ASDE 2014/01
  - 2. ASDE 2014/01
  - 3. ASDE 2014/01
  - 4. Public records 2015/05
  - 5. MSG 2015/07
  - 6. MSG 2016/01

- 32. MSG 2023/06 Nat. Rep. Batch 22
- 33. MSG 2023-09 Native Am. Batch 3
- 34. MSG 2023-10 Nat. Rep. Batch 23
- o **primary\_respondent**: indicates if the respondent was the first person within the household (i.e. to become a member or whether s/he was added as a subsequent member. A household in this regard is broadly defined as anyone living together with the primary respondent. That is, a household comprises individuals who live together, e.g. as part of a family relationship (like a spouse/child/parent) or in context of some other relationship (like a roommate or tenant).
- hardware: indicates whether the respondent ever received hardware or not. Note: this variable should not be used to determine whether a respondent received hardware at a given point in time and/or whether s/he used the hardware to participate in a survey. Rather, it indicates whether hardware was ever provided:

- 1. None
- 2. Tablet (includes Internet)
- **language**: the language in which the survey was conducted. This variable takes a value of 1 for English and a value of 2 for Spanish.
- start\_date (start\_year, start\_month, start\_day, start\_hour, start\_min, start\_sec): indicates the time at which the respondent started the survey.
- end\_date (end\_year, end\_month, end\_day, end\_hour, end\_min, end\_sec): indicates the time at which the respondent completed the survey.
- o cs\_001: indicates how interesting the respondent found the survey.

# 4 DEMOGRAPHICS

Every UAS survey data set also includes demographic variables, which provide background information about the respondent and their household. Demographic information such as age, ethnicity, education, marital status, work status, state of residence, family structure is elicited every quarter through the "My Household" survey. The demographic variables provided with each survey are taken from the most recent 'MyHousehold' survey answered by the respondent. If at the time of a survey, the information in "My Household" is more than three months old, a respondent is required to check and update his or her information before being able to take the survey.

The demographic variables are based on the questions taken from the My Household survey after the application of the cleaning process.

The following variables are available in survey data sets after October 8, 2025:

- **sex**: indicates the sex of the respondent as assigned at birth. Is set to gender if the respondent has not filled out My Household after October 8, 2025.
- o **genderid**: indicates the current gender of the respondent. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025. Available in data sets after October 8, 2025.
- dateofbirth\_year: indicates the year of birth of the respondent.
- o age: indicates the age of the respondent at the start of the survey.
- o **agerange**: if the respondent's age cannot be calculate due to missing information, 'agerange' indicates the approximate age. Should a value for both the 'age' and 'agerange' be present, then 'age' takes precedence over 'agerange'.
- o citizenus: indicates whether the respondent is a U.S. citizen.
- o **bornus**: indicates whether the respondent was born in the U.S.
- **stateborn**: indicates the state in which the respondent was born. Is set to missing (.) if the respondent was not born in the U.S.
- **countryborn**: indicates the country in which the respondent was born. Is set to missing (.) if the respondent was born in the U.S.
- o statereside: indicates the state in which the respondent is living.
- immigration\_status: indicates whether the respondent is an immigrant. It takes one
  of the following values: 0 Non-immigrant, 1 First generation immigrant (immigrant who
  migrated to the U.S), 2 Second generation immigrant (U.S.-born children of at least
  one foreign-born parent), 3 Third generation immigrant (U.S.-born children of at least

- one U.S.-born parent, where at least one grandparent is foreign-born), or 4 Unknown immigrant status.
- o maritalstatus: indicates the marital status of the respondent.
- **livewithpartner**: indicates whether the respondent lives with a partner.
- o education: indicates the highest level of education attained by the respondent.
- white: indicates whether the respondent identifies him or herself as white (Caucasian).
- **black**: indicates whether the respondent identifies him or herself as black (African-American).
- nativeamer: indicates whether the respondent identifies him or herself as Native American (American Indian or Alaska Native).
- asian: indicates whether the respondent identifies him or herself as Asian (Asian-American).
- pacific: indicates whether the respondent identifies him or herself as Native Hawaiian or Other Pacific Islander.
- o race: indicates the race of the respondent as singular (e.g., '1 White' or '2 Black') or as mixed (in case the respondent identifies with two or more races). The value '6 Mixed' that the respondent answered 'Yes' to at least two of the single race categories. This variable is generated based on the values of the different race variables (white, black, nativeamer, asian, pacific). This composite measure is not conditional on hisplatino, so an individual may identify as Hispanic or Latino, and also as a member of one or more racial groups.
- race: indicates the race the respondent identifies with most (if mixed). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hisplatino: indicates whether the respondent identifies him or herself as being Hispanic or Latino. This variable is asked separately from race.
- mena: indicates whether the respondent identifies as being of Middle Eastern or North African ancestry. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- working: indicates whether the respondent is working for pay.
- sick\_leave: indicates whether the respondent is not working because sick or on leave.
- o unemp\_layoff: indicates whether the respondent is unemployed or on lay off.
- unemp\_look: indicates whether the respondent is unemployed and looking for a job.
- o retired: indicates whether the respondent is retired.

- o disabled: indicates whether the respondent has a disability.
- workemployer: indicates whether the respondent works for an employer. Is set to missing (".e") if no answer for laborstatus was given by the respondent. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- workself: indicates whether the respondent is self-employed. Is set to missing (".e") if no answer for laborstatus was given by the respondent. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- homemaker: indicates whether the respondent is a homemaker. Is set to missing (".e") if no answer for laborstatus was given by the respondent. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- **student**: indicates whether the respondent is a student. Is set to missing (".e") if no answer for laborstatus was given by the respondent. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- notworking: indicates whether the respondent is not working and not looking for work. Is set to missing (".e") if no answer for laborstatus was given by the respondent. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- If\_other: indicates whether the respondent has another labor force status.
- laborstatus: indicates the labor force status of the respondent as singular (e.g., '1 Working for pay' or '2 On sick or other leave') or as mixed (in case the respondent selects two or more labor statuses). The value '8 Mixed' indicates that the respondent answered 'Yes' to at least two of the single labor force status variables. This variable is generated based on the values of the different labor status variables (working, sick\_leave, unempl\_layoff, unempl\_look, retired, disabled, lf\_other).
- hourswork: indicates the number of hours the respondent works per week. Is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- hhincome: indicates the total combined income of all members of the respondent's household (living in their household) during the past 12 months.
- o anyhhmember: indicates whether there were any members in the respondent's household at the time he/she answered the survey as reported by the respondent. Based on the hhmemberin variables if the respondent has not filled out My Household after October 8, 2025. Based on hhcomp\_total if the respondent has filled out My Household after October 8, 2025.
- hhmembernumber: indicates the number of household members in the respondent's household at the time of the survey as reported by the respondent. It may be that 'anyhhmember' is 'Yes', but 'hhmembernumber' is missing if the respondent did not provide the number of household members at the time of the survey. Based on

- the hhmemberin variables if the respondent has not filled out My Household after October 8, 2025. Based on hhcomp\_total if the respondent has filled out My Household after October 8, 2025.
- o hhcomp\_male\_0\_3: indicates the number of male children ages 0 through 4 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_female\_0\_3: indicates the number of female children ages 0 through 4 who
  are living in the respondent's household right now (even if they only live with the
  respondent part-time or temporarily). Is set to missing (".v") if the respondent has not
  filled out My Household after October 8, 2025.
- hhcomp\_other\_0\_3: indicates the number of other-gendered children ages 0 through 4 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.j/li¿
- o hhcomp\_male\_4\_12: indicates the number of male children ages 5 through 12 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_female\_4\_12: indicates the number of female children ages 5 through 12 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_other\_4\_12: indicates the number of other-gendered children ages 5 through 12 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_male\_13\_17: indicates the number of male children ages 13 through 17 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_female\_13\_17: indicates the number of female children ages 13 through 17 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_other\_13\_17: indicates the number of other-gendered children ages 13 through 17 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.

- hhcomp\_male\_18\_64: indicates the number of male adults ages 18 through 64 who
  are living in the respondent's household right now (even if they only live with the
  respondent part-time or temporarily). Is set to missing (".v") if the respondent has not
  filled out My Household after October 8, 2025.
- hhcomp\_female\_18\_64: indicates the number of female adults ages 18 through 64 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_other\_18\_64: indicates the number of other-gendered adults ages 18 through 64 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_male\_65plus: indicates the number of male adults ages 65 or older who
  are living in the respondent's household right now (even if they only live with the
  respondent part-time or temporarily). Is set to missing (".v") if the respondent has not
  filled out My Household after October 8, 2025.
- hhcomp\_female\_65plus: indicates the number of female adults ages 65 or older who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out Mv Household after October 8, 2025.
- **hhcomp\_other\_65plus**: indicates the number of other-gendered adults ages 65 or older who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- **hhcomp\_total\_18\_64**: indicates the total number of adults 18 through 64 who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_total\_65plus: indicates the total number of adults 65 or older who are living
  in the respondent's household right now (even if they only live with the respondent
  part-time or temporarily). Is set to missing (".v") if the respondent has not filled out
  My Household after October 8, 2025.
- hhcomp\_total\_adults: indicates the total number of adults who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- hhcomp\_total\_children: indicates the total number of children who are living in the respondent's household right now (even if they only live with the respondent parttime or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.

- o **hhcomp\_total**: indicates the total number of people who are living in the respondent's household right now (even if they only live with the respondent part-time or temporarily). Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- parent\_guardian\_a: indicates whether the respondent is the parent or guardian of one or more children ages 0 to 4. Is set to missing (".a") if hhcomp\_total\_children is not greater than 0. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- parent\_guardian\_b: indicates whether the respondent is the parent or guardian of one or more children ages 5 to 12. Is set to missing (".a") if hhcomp\_total\_children is not greater than 0. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.
- parent\_guardian\_c: indicates whether the respondent is the parent or guardian of one or more children ages 13 to 17. Is set to missing (".a") if hhcomp\_total\_children is not greater than 0. Is set to missing (".v") if the respondent has not filled out My Household after October 8, 2025.

The following variables were provided up until October 8, 2025. Several remain available in data sets created after October 8, 2025 on request.

- **gender**: indicates the gender of the respondent. Available in data sets before October 9, 2025.
- **countryborn\_other**: indicates the country of birth if that country is not on the drop down list of countries shown to the respondent'.
- hisplatinogroup: indicates which Hispanic or Latino group a respondent identifies him or herself with. Is set to missing (.) if the respondent does not identify him or herself as being Hispanic or Latino. Available in data sets after October 8, 2025 on request.
- employmenttype: indicates the employment type of the respondent (employed by the government, by a private company, a nonprofit organization, or self-employed).
   Is set to missing (.) if the respondent is not currently working or currently on sick or other leave. Available in data sets before October 9, 2025.
- workfullpart: indicates whether the respondent works full or part-time. Is set to missing (.) if the respondent is not currently working or currently on sick or other leave. Available in data sets before October 9, 2025.
- hhmemberin\_#: indicates whether a household member is currently in the household as reported by the respondent. Household members are never removed from the stored household roster and their information is always included in survey data sets. The order of the roster is the same order in which household members were specified by the respondent in the 'MyHousehold' survey. The order is identified by

the suffix \_# (e.g., \_1 indicates the first household member, \_2 the second household member, etc.).

As an example, if the first household member is in the household at the time of the survey, 'hhmemberin\_1' is set to '1 HH Member 1 is in the HH'; if he/she has moved out, 'hhmemberin\_1' is set to '0 HH member 1 is no longer in the HH'. Since information of other household members (stored in the variables listed below) is always included in survey data sets, information about 'hhmemberin\_1' is available whether this person is still in the household or has moved out. Available in data sets before October 9, 2025. Available in data sets after October 8, 2025 on request.

- **hhmembergen**\_#: indicates the gender of the household member as reported by the respondent. Available in data sets before October 9, 2025. Available in data sets after October 8, 2025 on request.
- hhmemberage\_#: indicates the age of the household member. The age is derived from the month and year of birth of the household member as reported by the respondent. Available in data sets before October 9, 2025. Available in data sets after October 8, 2025 on request.
- hhmemberrel\_#: indicates the relationship of the respondent to the household member as reported by the respondent. Available in data sets before October 9, 2025.
   Available in data sets after October 8, 2025 on request.
- hhmemberuasid\_#: indicates the 'uasid' of the household member if this person is also a UAS panel member. It is set to missing (.) if this person is not a UAS panel member at the time of the survey. Since this identifier is directly reported by the respondent (chosen from a preloaded list), it may differ from the actual (correct) 'uasid' of the UAS member it refers to because of reporting error. Also, this variable should not be used to identify UAS members in a given household at the time of the survey. This is because the variables 'hhmemberuasid\_#' are taken from the most recent 'My Household' and changes in household composition involving UAS members may have occurred between the time of the respondent answered 'My Household' and the time the respondent answers the survey. To follow UAS members of a given household, it is advised to use the identifiers 'uashhid' and 'survhhid'. Available in data sets before October 9, 2025. Available in data sets after October 8, 2025 on request.

Lastly, data sets created after May 8, 2025 include an urbanicity variable. It is based on panel members' current census tract of residence and the 2010 Rural-Urban Commuting Area (RUCA) codes released by the US Department of Agriculture's Economic Research Service. To preserve confidentiality, the UAS collapses the 10 primary RUCA codes to 4 levels: Metropolitan, Micropolitan, Small/Rural, and Unknown. The Metropolitan level corresponds to primary RUCA codes 1-3, the Micropolitian level corresponds to RUCA codes 4-6, and the Small/Rural UAS classification corresponds to RUCA codes 7-10.

For detailed information and definitions of the 10 primary RUCA codes, please visit the

USDA ERS Rural-Urban Commuting Area Codes site. Surveys conducted completely prior to May 8, 2025 will have an urbanicity data variable available on request.

# 5 MISSING DATA CONVENTIONS

Data files provide so-called clean data, that is, answers given to questions that are not applicable anymore at survey completion (for example because a respondent went back in the survey and skipped over a previously answered question) are treated as if the questions were never asked. In the data files all questions that were asked, but not answered by the respondent are marked with (.e). All questions never seen by the respondent (or any dirty data) are marked with (.a). The latter may mean that a respondent did not view the question because s/he skipped over it; or alternatively that s/he never reached that question due to a break off. If a respondent did not complete a survey, the variables representing survey end date and time are marked with (.c). Household member variables are marked with (.m) if the respondent has less household members (e.g. if the number of household members is 2, any variables for household member 3 and up are marked with (.m).

UAS provides data in STATA and CSV format. Stata data sets come with include variable labels that are not available in the CSV files. Value labels are provided for single-response answer option. In STATA these labels will include the labels 'Not asked' and 'Not answered' for (.a) and (.e), and will show in tabulations such as 'tab q1, missing'. For multiple-response questions a binary variable is created for each answer option indicating whether the option was selected or not. A summary variable is also provided in string format reflecting which options were selected and in which order. For example, if a question asked about favorite animals with options cat, dog, and horse, then if a respondent selected horse and then cat, the binary variables for horse and cat will be set to yes, while the overall variable would have a string value of '3-1'. If no answer was given, all binary variables and the summary variable will be marked with '.e'.

Questions that are asked multiple times are often implemented as so-called array questions. Supposing the name of such question was Q1 and it was asked in 6 different instances, your data set would contain the variables Q1\_1\_ to Q1\_6\_. To illustrate, if a survey asked the names of all children, then child\_1\_ would contain the name of the first child the respondent named and so on.

More information about the UAS data in general can be found on the UAS Data Pages web site.

# **6 ROUTING SYNTAX**

The survey with routing presented in the next section includes all of the questions that make up this survey, the question answers when choices were provided, and the question routing. The routing includes descriptions of when questions are grouped, conditional logic that determines when questions are presented to the respondent, randomization of questions and answers, and fills of answers from one question to another.

If you are unfamiliar with conditional logic statements, they are typically formatted so that *if* the respondent fulfills some condition (e.g. they have a cellphone or a checking account), *then* they are presented with some other question or the value of some variable is changed. If the respondent does not fulfill the condition (e.g. they are not a cellphone adopter or they do not have a checking account), something *else* happens such as skipping the next question or changing the variable to some other value. Some of the logic involved in the randomization of questions or answers being presented to the respondent is quite complex, and in these instances there is documentation to clarify the process being represented by the routing.

Because logic syntax standards vary, here is a brief introduction to our syntax standards. The syntax used in the conditional statements is as follows: '=' is equal to, '<' is less than, '>' is greater than, and '!=' is used for does not equal. When a variable is set to some number N, the statement looks like 'variable := N'.

The formatting of the questions and routing are designed to make it easier to interpret what is occurring at any given point in the survey. Question ID is the bold text at the top of a question block, followed by the question text and the answer selections. When a question or variable has associated data, the name links to the appropriate data page, so you can easily get directly to the data. Text color is used to indicate the routing: red is conditional logic, gold is question grouping, green is looping, and orange is used to document randomization and other complex conditional logic processes. The routing is written for a computer to parse rather than a human to read, so when the routing diverges significantly from what is displayed to the respondent, a screenshot of what the respondent saw is included.

The name of the randomization variables are defined in proximity to where they are put into play, and like the question ID the names of the randomization variables can be used to link directly to the associated data page.

# 7 SURVEY WITH ROUTING

## Start of section Caregiver

#### **c**\_intro (Section Caregiver)

In a recent survey, you told us that you are currently assisting someone (parent, grand-parent, wife, husband, child, another family member, neighbor, or close friend) with basic personal activities because they cannot handle them without help. We are interested in how people in the U.S. provide care for a family member or close friend and how caregivers are faring during these times.

## **a002** (how many people spend assisting in section Caregiver)

How many people do you spend time assisting with basic personal activities because they are unable to handle them without help?

11

22

33

44

5 5 or more

#### IF a002 > 1 THEN

#### a003\_intro (Section Caregiver)

For the following questions, please think about the person you **primarily** care for, that is the person who requires the most time and energy from you as a caregiver.

## END OF IF

Fill code of question FL\_ca003 executed

#### **a003** (name care recipient in section Caregiver)

Could you provide a name, nickname, or initials for the person you( **primarily**) care for? We will use your chosen name, nickname or initials to refer to this person throughout the rest of the survey. If you prefer not to provide a name, nickname, or initials, you may leave this blank and we will refer to this person as the care recipient.

**STRING**

cl\_intro (Section Uasclear)

We are about to launch a new study for caregivers called UAS-Caregiving Lifecourse Experiences Assessed in Real-time (UAS-CLEAR). This study, supported by the National Institute of Health, will help researchers understand how people who provide care for a family member or close friend are faring. For this goal, the study will use data from surveys and fitness tracking devices.

Please answer the following questions about the type of phone you have to find out if you are eligible to participate.

## GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

# **q\_phone** (phone in section Uasclear)

Which of the following mobile phones do you currently own or have for personal use? (The phone must be in working condition and have a cell plan or be WiFi-enabled)

I own or have for personal use:

- 1 An Android smartphone
- 2 An Apple iPhone
- 3 Another type of internet-connected phone, please specify:
- 4 A mobile phone that can only make calls or send text messages
- 5 No working mobile phone of any kind

# compatible\_device (Section Uasclear)

Congratulations! You have a compatible fitness tracking device and you can use it for this study. We ask that you participate for at least **one year** starting when you connect your personal (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google

tracker/smartwatch) with the study. After the year is over, you may continue to participate as long as the study continues and you remain enrolled in the UAS.

#### GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

procedures\_nonalir (Section Uasclear)
STUDY PROCEDURES

**Participants' Selection**: We will randomly select 1,000 interested UAS members to participate in this study. To ensure everyone is fairly represented, we are looking for people across the country of all ages, health, and economic backgrounds.

**Enrollment**: If you are selected to participate, you will connect your personal (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) to the study. This should take about 5 minutes, and the UAS help desk will be available to provide assistance if you need it.

# IF havedevice IN (1,2,4) THEN

activities\_nonalir\_apple (Section Uasclear)
Study activities:

If you are selected to participate: We will ask you to install the UAS phone app called "Zemi" (instructions about how to do that will be provided). We will ask you to use the Zemi app in order to enroll and connect your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) to the study. This should take about 5 minutes. We will send you instructions for doing this and the UAS help desk will be available if you need assistance. Once you are enrolled, we will ask you to wear your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) on your wrist at all times, including when you are sleeping. You can take it off for charging, special occasions, or other reasons--just please wear it as much as possible. You will earn up to \$5 per month for wearing the (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) and keeping it synced with your phone or tablet. We will ask you to complete a short survey every three months, for which you will be paid \$3 per survey. Within the first four months of your participation, we will ask you to answer a short survey through your smartphone five times a day for one week. We will call this the "week assessment." To do this, you will use the Zemi app. You will earn \$2 for each short survey you complete.

# **ELSE**

activities\_nonalir\_fitbit (Section Uasclear)
Study activities:

If you are selected to participate:We will ask you to use the UAS study pages to enroll and connect your personal Fitbit to this study (instructions about how to do that will be provided).Once you are enrolled, we will ask you to wear your Fitbit on your wrist at all times, including when you are sleeping. You can take it off for charging, special occasions, or other reasons--just please wear it as much as possible. ## **END OF IF**

## **END OF GROUP**

keyinfo3\_nonalir (Section Uasclear)

**Communication**: During the study, we will send you notifications and reminders to wear and sync your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) through your UAS study pages or via email.

Data Collected: The (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) typically collects the following health information, although this may vary with the type of (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) you have:Steps, activity, and exerciseHeart rateBreathing rateSleepOxygen saturationElectrocardiogramCardiac FitnessTemperatureSkin temperatureGPS (only if you consent)Device information like model and charging frequency(Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) may be able to collect more health information in the future such as blood pressure or glucoself you agree to participate, we will also have access to the information data that your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) may have recorded prior to enrolling in the study.

Compensation: You can earn up to \$142 if you participate in this study for one year. This includes earning \$5 per month for wearing your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) and syncing the data for at least 20 days each month. You will be able to track how many days of data we have received through your UAS study pages. It also includes earning \$3 for answering a short survey once every three months and up to \$70 for completing your "week assessment."

keyinfo4\_nonalir (Section Uasclear)

Withdrawal: If you decide to withdraw from the study at any point, you will still receive

any rewards you earned before withdrawing.

How will your data be kept safe: We take several steps to keep your Study Data confidential. First, only UAS staff will have access to any personally identifiable data. The UAS-CLEAR study team, the funding agency and Biomedical Research Alliance of New York (BRANY) will only have access to DEIDENTIFIED study data that is linked only to your UAS ID number. The BRANY IRB (Institutional Review Board) reviews and monitors research studies to protect the rights and welfare of research participants. When you set up your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) account, any information (including personal information) you provide on the (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) app will be transmitted to (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) as part of their Terms of Service. However, (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) does not retain personal information, and no personal information will be sent from (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch) to the study team. UAS will continue to securely maintain your personal or contact information.

**Future Use of Information**: After removal of any personally identifiable information, your information could be used for future research studies or distributed to another investigator for future research studies without your consent.

**Certificate of Confidentiality**: To help us protect your privacy, we have obtained a Certificate of Confidentiality from the National Institutes of Health. The researchers can use this Certificate to legally refuse to disclose information that may identify you in any federal, state, or local civil, criminal, administrative, legislative, or other proceedings, for example, if there is a court subpoena. The researchers will use the Certificate to resist any demands for information that would identify you.

# **keyinfo5\_nonalir** (Section Uasclear)

Risks or Discomforts: This is a minimal risk study, which means that the risk of experiencing any harm or discomfort in this study is no greater than the risk you would encounter in daily life. Some questions may make you feel uncomfortable or distressed. You can choose to stop the study at any time or skip any question. There are potential privacy and security risks. Your study information could be subject to unauthorized access or your data could be linked to you. We plan to minimize the possibility of a breach of confidentiality by instituting data safeguarding procedures and state of the art encryption.

**Benefits**: You may or may not receive any benefit from being in this study. You may gain new insight about your activity, fitness, sleep, and overall health through wearing your (Apple Watch/Samsung tracker/smartwatch/Fitbit/Google tracker/smartwatch/Fitbit/Google tracker/smartwatch) data regularly. If you take part in this study, the results

may help the investigators study how people who provide care for a family member or close friend fare on a daily basis and how their wellbeing may be improved.

**Alternatives**: An alternative would be to not participate in this study. Whether you participate in this study or not will not impact your participation in other UAS studies.

**keyinfo6\_nonalir** (Section Uasclear)

**Voluntary Participation**: It is your choice whether to participate. If you choose to participate, you may change your mind and leave the study at any time. If you decide not to participate, or choose to end your participation in this study, you will not be penalized or lose any benefits that you are otherwise entitled to.

**Participant Termination**: You may be removed from this study without your consent for any of the following reasons: you do not follow the investigator's instructions, at the discretion of the investigator or the sponsor, or the sponsor closes the study. If this happens, the investigator will discuss other options with you.

Contact Information: If you have questions or concerns about this study, you can get in touch with your Study Manager, Tania Gutsche, at tgutsche@usc.edu and (213) 821-1819. If you have any questions about your rights as a research subject or complaints regarding this research study, or you are unable to reach the research staff, you may contact a person independent of the research team at the Biomedical Research Alliance of New York Institutional Review Board at 516-318-6877. Questions, concerns or complaints about research can also be registered with the Biomedical Research Alliance of New York Institutional Review Board at https://www.branyirb.com/concerns-about-research.

Thank you so much for being a valued Understanding America Study participant.

If you are interested in UAS-CLEAR, please let us know in the next question.

#### ELSE

no\_compatible\_device (Section Uasclear)

For this project, we will provide you with a fitness tracking device (Fitbit Charge 6), which is for you to keep.

We ask that you participate for at least **one year** starting when you connect your study-provided Fitbit with the study. After the year is over, you may continue to participate as long as the study continues and you remain enrolled in UAS.

# GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

procedures\_nonalir\_nodevice (Section Uasclear)

## STUDY PROCEDURES

**Participants' Selection**: We will randomly select 1,000 interested UAS members to participate in this study. To ensure everyone is fairly represented, we are looking for people across the country of all ages, health, and economic backgrounds.

**Enrollment**: If you are selected to participate:UAS staff will contact you to confirm your current mailing address and then mail you a Fitbit.Once you receive your Fitbit, we will ask you to install the Fitbit app on your smartphone or tablet within 1 week.The enrollment guide included in the package will help you set up your Fitbit device and account and enroll in the study. This should take you about 10 minutes and the UAS help desk will be available to provide assistance if you need it.

The Fitbit app is free, and you can remove it whenever you wish to withdraw from the study. You will need to share your location information with the Fitbit app to obtain your time zone. However, we will not collect or use this information for research purposes without your consent.

# activities\_nonalir\_nodevice (Section Uasclear) Study activities:

The UAS-CLEAR study team, the funding agency and Biomedical Research Alliance of New York (BRANY) will only have access to DEIDENTIFIED study data that is linked only to your UAS ID number. The BRANY IRB (Institutional Review Board) reviews and monitors research studies to protect the rights and welfare of research participants. When you set up your Fitbit account, any information (including personal information) you provide on the Fitbit app will be transmitted to Fitbit as part of their Terms of Service. However, Fitbit does not retain personal information, and no personal information will be sent from Fitbit to the study team. UAS will continue to securely maintain your personal or contact information.

**Future Use of Information**: After removal of any personally identifiable information, your information could be used for future research studies or distributed to another investigator for future research studies without your consent.

**Certificate of Confidentiality**: To help us protect your privacy, we have obtained a Certificate of Confidentiality from the National Institutes of Health. The researchers can use this Certificate to legally refuse to disclose information that may identify you in any federal, state, or local civil, criminal, administrative, legislative, or other proceedings, for example, if there is a court subpoena. The researchers will use the Certificate to resist any demands for information that would identify you.

# **keyinfo5\_nonalir\_nodevice** (Section Uasclear)

**Risks or Discomforts**: This is a minimal risk study, which means that the risk of experiencing any harm or discomfort in this study is no greater than the risk you would encounter in daily life. Some questions may make you feel uncomfortable or distressed. You can choose to stop the study at any time or skip any question. There are potential privacy and security risks. Your study information could be subject to unauthorized access or your data could be linked to you. We plan to minimize the possibility of a breach of confidentiality by instituting data safeguarding procedures and state of the art encryption.

Benefits: You may or may not receive any benefit from being in this study.

You may gain new insight about your activity, fitness, sleep, and overall health through wearing your Fitbit and viewing your Fitbit data regularly. If you take part in this study, the results may help the investigators study how people who provide care for a family member or close friend fare on a daily basis and how their wellbeing may be improved.

**Alternatives**: An alternative would be to not participate in this study. Whether you participate in this study or not will not impact your participation in other UAS studies.

# keyinfo6\_nonalir\_nodevice (Section Uasclear)

**Voluntary Participation**: It is your choice whether to participate. If you choose to participate, you may change your mind and leave the study at any time. If you decide not to participate, or choose to end your participation in this study, you will not be penalized or lose any benefits that you are otherwise entitled to.

**Participant Termination**: You may be removed from this study without your consent for any of the following reasons: you do not follow the investigator's instructions, at the discretion of the investigator or the sponsor, or the sponsor closes the study. If this happens, the investigator will discuss other options with you.

Contact Information: If you have questions or concerns about this study, you can get in touch with your Study Manager, Tania Gutsche, at tgutsche@usc.edu and (213) 821-1819. If you have any questions about your rights as a research subject or complaints regarding this research study, or you are unable to reach the research staff, you may contact a person independent of the research team at the Biomedical Research Alliance of New York Institutional Review Board at 516-318-6877. Questions, concerns or complaints about research can also be registered with the Biomedical Research Alliance of New York Institutional Review Board at https://www.branyirb.com/concerns-about-research.

Thank you so much for being a valued Understanding America Study participant.

If you are interested in UAS-CLEAR, please let us know in the next question.

# **END OF IF**

## cl\_intro\_alir (Section Uasclear)

We are about to launch a new study for caregivers called UAS-Caregiving Lifecourse Experiences Assessed in Real-time (UAS-CLEAR). This study, supported by the National Institute of Health, will help researchers understand how people who provide care for a family member or close friend are faring. For this goal, the study will use data from surveys and Fitbit watches. As a valued participant in the America Life in Realtime (ALIR) project, you are automatically eligible to participate in UAS-CLEAR.

The duration of the UAS-CLEAR study is **one year**, during which we ask you to keep wearing your Fitbit as you are already doing for the ALiR project and answer additional surveys.

# cl\_intro\_alir2 (Section Uasclear)

We now describe what the study involves and ask you whether you are interested in participating.

procedures\_alir (Section Uasclear)
STUDY PROCEDURES

**Participants' Selection**: We expect about 1,000 UAS members to participate in this study. To ensure everyone is fairly represented, we are looking for people across the country of all ages, health, and economic backgrounds.

**Enrollment**:If you are interested in participating in this project, you will be automatically enrolled in the UAS-CLEAR study since you are already participating in the ALIR study.

activities\_alir (Section Uasclear) Study activities:

If you are interested in participating:We will ask you to wear your Fitbit on your wrist at all times, including when you are sleeping. You can take it off for charging, special occasions, or other reasons - just please wear it as much as possible. You will earn up to \$5 per month for wearing your Fitbit and keeping it synced with your phone or tablet. By wearing your Fitbit, you will contribute data to both ALIR and UAS-CLEAR at once, but will earn the rewards of each study separately, a total of up to \$10 a month.We will ask you to complete a short survey every three months, for which you will be paid \$3 per survey.Within the first four months of your participation, we will ask you to answer a short survey through your smartphone six times a day for one week. We will call this the "week assessment." To do this, you will install and use the UAS phone app called "Zemi" (we will provide you with instructions about how to install and use the Zemi app close to that week). You will earn \$2 for each short survey you complete.

## keyinfo3\_alir (Section Uasclear)

**Communication**: During the study, we will send you notifications and reminders to wear and sync your Fitbit through your UAS study pages or via email.

**Data Collected**: The Fitbit typically collects the following health information:Steps, activity, and exerciseHeart rateBreathing rateSleepOxygen saturationElectrocardiogramCardiac FitnessTemperatureSkin temperatureGPS (only if you consent)Device information like model and charging frequencyFitbit may be able to collect more health information in the future such as blood pressure or glucose**Compensation**: You can earn up to \$142 if you participate in the UAS-CLEAR study for one year. This includes earning \$5 per month for wearing your Fitbit for at least 20 days each month. You will be able to track how many days of data we have received through your UAS study pages (separately for the ALiR and UAS-CLEAR projects). It also includes earning \$3 for answering a short survey **once every three months** and up to \$70 for completing your

"week assessment."

# keyinfo4\_alir (Section Uasclear)

**Withdrawal**: If you decide to withdraw from the study at any point, you will still receive any rewards you earned before withdrawing.

How will your data be kept safe: We take several steps to keep your Study Data confidential. First, only UAS staff will have access to any personally identifiable data. The UAS-CLEAR study team, the funding agency and Biomedical Research Alliance of New York (BRANY) will only have access to DEIDENTIFIED study data that is linked only to your UAS ID number. The BRANY IRB (Institutional Review Board) reviews and monitors research studies to protect the rights and welfare of research participants. When you set up your Fitbit account, any information (including personal information) you provide on the Fitbit app will be transmitted to Fitbit as part of their Terms of Service. However, Fitbit does not retain personal information, and no personal information will be sent from Fitbit to the study team. UAS will continue to securely maintain your personal or contact information.

**Future Use of Information**: After removal of any personally identifiable information, your information could be used for future research studies or distributed to another investigator for future research studies without your consent.

**Certificate of Confidentiality**: To help us protect your privacy, we have obtained a Certificate of Confidentiality from the National Institutes of Health. The researchers can use this Certificate to legally refuse to disclose information that may identify you in any federal, state, or local civil, criminal, administrative, legislative, or other proceedings, for example, if there is a court subpoena. The researchers will use the Certificate to resist any demands for information that would identify you.

## **keyinfo5\_alir** (Section Uasclear)

Risks or Discomforts: This is a minimal risk study, which means that the risk of experiencing any harm or discomfort in this study is no greater than the risk you would encounter in daily life. Some questions may make you feel uncomfortable or distressed. You can choose to stop the study at any time or skip any question. There are potential privacy and security risks. Your study information could be subject to unauthorized access or your data could be linked to you. We plan to minimize the possibility of a breach of confidentiality by instituting data safeguarding procedures and state of the art encryption.

**Benefits**: You may or may not receive any benefit from being in this study. You may gain new insight about your activity, fitness, sleep, and overall health through wearing your Fitbit and viewing your Fitbit data regularly. If you take part in this study, the results may help the investigators study how people who provide care for a family member or close friend fare on a daily basis and how their wellbeing may be improved.

**Alternatives**: An alternative would be to not participate in this study. Whether you participate in this study or not will not impact your participation in other UAS studies.

## **keyinfo6\_alir** (Section Uasclear)

**Voluntary Participation**: It is your choice whether to participate. If you choose to participate, you may change your mind and leave the study at any time. If you decide not to participate, or choose to end your participation in this study, you will not be penalized or lose any benefits that you are otherwise entitled to.

**Participant Termination**: You may be removed from this study without your consent for any of the following reasons: you do not follow the investigator's instructions, at the discretion of the investigator or the sponsor, or the sponsor closes the study. If this happens, the investigator will discuss other options with you.
