1 INTRODUCTION

This UAS panel survey, titled "UAS121: Financial Literacy; Personality; Understanding Probabilities; Numeracy" captures the respondents' financial literacy, personality traits, understanding of probabilities and numeracy, and well being. This survey is no longer in the field. Respondents were paid \$20 to complete the survey.

This survey, UAS121, is the wave 2 version of UAS1 and UAS2 combined. It includes (amongst others Lipkus numeracy, financial literacy from the National Financial Capability Study, Big 5 personality, and subjective well being measurements. Scores are included in the data and scoring information is provided in a document on the survey's data page.

Note: data files for this survey were adjusted on January 29, 2019 to remove 2 unqualified respondents who were inadvertently included in the initial data files. Please contact uas-l@usc.edu with any questions.

1.1 Topics

This survey contains questions (among others) on the following topics: Cognitive Abilities, Financial Literacy, Psychology, Subjective Well-being. A complete survey topic categorization for the UAS can be found [here](#).

1.2 Experiments

This survey includes experiment(s) of the following type(s): Auxiliary Randomization. Please refer to explanatory comments in the Routing section for detailed information. A complete survey experiment categorization for the UAS can be found [here](#).

1.3 Citation

Each publication, press release or other document that cites results from this survey must include an acknowledgment of UAS as the data source and a disclaimer such as, 'The project described in this paper relies on data from survey(s) administered by the Understanding America Study, which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC or UAS.' For any questions or more information about the UAS, contact Tania Gutsche, Project and Panel Manager, Center for Economic and Social Research, University of Southern California, at tgutsche@usc.edu.

2 SURVEY RESPONSE AND DATA

2.1 Sample selection and response rate

The sample selection for this survey was:

All respondents who never completed UAS1 or UAS2 and active respondents who completed UAS1 and UAS2 more than two years ago.

As such, this survey was made available to 10945 UAS participants. Of those 10945 participants, 9732 completed the survey and are counted as respondents. Of those who are not counted as respondents, 124 started the survey without completing and 1089 did not start the survey. The overall response rate was 88.92%.

Note: We are unable to provide sample weights for a small number of UAS members (see the Sample weighting section below for details). If they completed the survey, these members are included in the data set with a weight of zero, but accounted for in the computation of total sample size and survey response rate.%.

The detailed survey response rate is as follows:

UAS121 - Response Overview	
Size of selected sample	10945
Completed the survey	9732
Started but did not complete the survey	124
Did not start the survey	1089
Response rate	88.92%

2.2 Timings

The survey took respondents an average of 23 minutes, and the full distribution of survey response times is available in the figure below. Times per question are available upon request.

Distribution of Respondents' Survey Response Times

2.3 Sample & Weighting

Sample weights for this survey are computed following the general UAS Weighting Procedure. Specifically, we use a two-step process where we first compute base weights, which correct for unequal probabilities of sampling UAS members, and then generate final, post-stratification weights, which align the sample to the reference population along certain socio-economic dimensions. These are gender (male/female), race and ethnicity (White/Black/Other/Hispanic/Native American), age (18-39/40-49/50/59/60+), education (High school or less/Some college/Bachelor or more), Census regions (Northeast/Midwest/West, excl. CA/CA, excl. LAC, LAC). Benchmark distributions for these variables are derived from the 6 most recent available Current Population Survey (CPS) Basic Monthly Survey with respect to the survey's completion date. The reference population considered for the weights is the U.S. population of adults age 18 and older.

This survey dataset may contain respondents with a weight of zero. These respondents belong to a small group of UAS members for whom sample weights cannot be computed due to non-probability recruitment for special projects. Hence, while they are accounted for in the total number of survey respondents, they do not contribute to any statistics using sample weights. More information is available from the UAS Weighting Procedure. Please contact UAS staff with any questions.

3 STANDARD VARIABLES

Each Understanding America Study data contains a series of standard variables, consisting of individual, household and sample identifiers, language indicator, time stamps and a rating by the respondent of how much he or she liked the survey:

- **uasid**: the identifier of the respondent. This identifier is assigned to a respondent at recruitment and stays with the respondent throughout each and every survey he/she participates in. When analyzing data from multiple surveys, the 'uasid' can be used to merge data sets.
- **uashhid**: the household identifier of the respondent. Every member is assigned a household identifier, stored in the variable 'uashhid'. For the primary respondent this identifier equals his or her 'uasid'. All other eligible members of the primary respondent's household (everyone who is 18 or older in the household) who become UAS respondents receive the 'uasid' of the primary respondent as their household identifier. The identifier 'uashhid' remains constant over time for all respondents. Thus it is always possible to find the original UAS household of an UAS panel member (even after they, for example, have moved out to form another household).
- **survhhid**: uniquely identifies the household a UAS panel member belongs to in a given survey. For instance, if the primary respondent and his/her spouse are both UAS members at the time of a given survey, they both receive the same 'survhhid' identifier for that survey. If they subsequently split, they receive two different 'survhhid' in subsequent surveys. They, however, always share the same 'uashhid'. The identifier 'survhhid' is set to missing (.) if no other household members are UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart if the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, household members have different 'survhhid' reflecting different household compositions at the time they answered the survey. For instance, suppose that the primary respondent and his/her spouse are both UAS members. If the primary respondent answers the survey when he/she is living with the spouse, but the spouse answers the survey when the couple has split, they receive different 'survhhid'. Hence, the variable 'survhhid' identifies household membership of UAS panel members, at the time the respondent answers the survey. Note: in the My Household survey 'survhhid' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.
- **uasmembers**: is the number of other household members who are also UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart is the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, the primary respondent of a household has a value of '0', whereas the second UAS household respondent has a value of '1'. Therefore 'uasmembers' should be interpreted as the

number of household and UAS panel members at the time the respondent answers the survey. Note: in the My Household survey 'uasmembers' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.

- **sampleframe**: indicates the sampling frame from which the household of the respondent was recruited. All UAS recruitment is done through address based sampling (ABS) in which samples are acquired based on postal records. Currently, the variable 'sampleframe' takes on four values reflecting four distinct sample frames used by the UAS over the year (in future data sets the number of sample frames used for recruitment may increase if additional specific populations are targeted in future recruitment batches):
 1. U.S. National Territory: recruited through ABS within the entire U.S.
 2. Areas high concentration Nat Ame: recruited through ABS in areas with a high concentration of Native Americans in the zip-code. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
 3. Los Angeles County: recruited through ABS within Los Angeles County.
 4. California: recruited through ABS within California.

Note: prior to March 6, 2024 this variable was called sampletype and had the following value labels for the above list in UAS data sets:

1. Nationally Representative Sample: recruited through ABS within the entire U.S.
 2. Native Americans: recruited through ABS in areas with a high concentration of Native Americans. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
 3. LA County: recruited through ABS within Los Angeles County.
 4. California: recruited through ABS within California.
- **batch**: indicates the batch from which the respondent was recruited. Currently, this variable takes the following values (in future data sets the number of batches may increase as new recruitment batches are added to the UAS):
 1. ASDE 2014/01
 2. ASDE 2014/01
 3. ASDE 2014/01

34. MSG 2023-10 Nat. Rep. Batch 23

- **primary_respondent**: indicates if the respondent was the first person within the household (i.e. to become a member or whether s/he was added as a subsequent member. A household in this regard is broadly defined as anyone living together with the primary respondent. That is, a household comprises individuals who live together, e.g. as part of a family relationship (like a spouse/child/parent) or in context of some other relationship (like a roommate or tenant).
- **hardware**: indicates whether the respondent ever received hardware or not. Note: this variable should not be used to determine whether a respondent received hardware at a given point in time and/or whether s/he used the hardware to participate in a survey. Rather, it indicates whether hardware was ever provided:

1. None
 2. Tablet (includes Internet)
- **language**: the language in which the survey was conducted. This variable takes a value of 1 for English and a value of 2 for Spanish.
 - **start_date (start_year, start_month, start_day, start_hour, start_min, start_sec)**: indicates the time at which the respondent started the survey.
 - **end_date (end_year, end_month, end_day, end_hour, end_min, end_sec)**: indicates the time at which the respondent completed the survey.
 - **cs_001**: indicates how interesting the respondent found the survey.

4 BACKGROUND DEMOGRAPHICS

Every UAS survey data set includes demographic variables, which provide background information about the respondent and his/her household. Demographic information such as age, ethnicity, education, marital status, work status, state of residence, family structure is elicited every quarter through the “My Household” survey. The demographic variables provided with each survey are taken from the most recent ‘MyHousehold’ survey answered by the respondent. If at the time of a survey, the information in “My Household” is more than three months old, a respondent is required to check and update his or her information before being able to take the survey.

The following variables are available in each survey data set:

- **gender**: the gender of the respondent.
- **dateofbirth_year**: the year of birth of the respondent.
- **age**: the age of the respondent at the start of the survey.
- **agerange**: if the respondent’s age cannot be calculate due to missing information, ‘agerange’ indicates the approximate age. Should a value for both the ‘age’ and ‘agerange’ be present, then ‘age’ takes precedence over ‘agerange’.
- **citizenus**: indicates whether the respondent is a U.S. citizen.
- **bornus**: indicates whether the respondent was born in the U.S.
- **stateborn**: indicates the state in which the respondent was born. This is set to missing (.) if the respondent was not born in the U.S.
- **countryborn**: indicates the country in which the respondent was born. This is set to missing (.) if the respondent was born in the U.S.
- **countryborn_other**: indicates the country of birth if that country is not on the drop down list of countries shown to the respondent’.
- **statereside**: the state in which the respondent is living.
- **immigration_status**: indicates whether the respondent is an immigrant. It takes one of the following values: 0 Non-immigrant, 1 First generation immigrant (immigrant who migrated to the U.S), 2 Second generation immigrant (U.S.-born children of at least one foreign-born parent), 3 Third generation immigrant (U.S.-born children of at least one U.S.-born parent, where at least one grandparent is foreign-born), or 4 Unknown immigrant status.
- **maritalstatus**: the marital status of the respondent.
- **livewithpartner**: indicates whether the respondent lives with a partner.

- **education**: the highest level of education attained by the respondent.
- **hisplativo**: indicates whether the respondent identifies him or herself as being Hispanic or Latino. This variable is asked separately from race.
- **hisplatinogroup**: indicates which Hispanic or Latino group a respondent identifies him or herself with. This is set to missing (.) if the respondent does not identify him or herself as being Hispanic or Latino.
- **white**: indicates whether the respondent identifies him or herself as white (Caucasian).
- **black**: indicates whether the respondent identifies him or herself as black (African-American).
- **nativeamer**: indicates whether the respondent identifies him or herself as Native American (American Indian or Alaska Native).
- **asian**: indicates whether the respondent identifies him or herself as Asian (Asian-American).
- **pacific**: indicates whether the respondent identifies him or herself as Native Hawaiian or Other Pacific Islander.
- **race**: indicates the race of the respondent as singular (e.g., '1 White' or '2 Black') or as mixed (in case the respondent identifies with two or more races). The value '6 Mixed' that the respondent answered 'Yes' to at least two of the single race categories. This variable is generated based on the values of the different race variables (white, black, nativeamer, asian, pacific). This composite measure is not conditional on hisplativo, so an individual may identify as Hispanic or Latino, and also as a member of one or more racial groups.
- **working**: indicates whether the respondent is working for pay.
- **sick_leave**: indicates whether the respondent is not working because sick or on leave.
- **unemp_layoff**: indicates whether the respondent is unemployed or on lay off.
- **unemp_look**: indicates whether the respondent is unemployed and looking for a job.
- **retired**: indicates whether the respondent is retired.
- **disabled**: indicates whether the respondent has a disability.
- **If_other**: specifies other labor force status.
- **laborstatus**: indicates the labor force status of the respondent as singular (e.g., '1 Working for pay' or '2 On sick or other leave') or as mixed (in case the respondent selects two or more labor statuses). The value '8 Mixed' indicates that the respondent answered 'Yes' to at least two of the single labor force status variables. This variable is generated based on the values of the different labor status variables (working, sick_leave, unempl_layoff, unempl_look, retired, disabled, If_other).

- **employmenttype**: indicates the employment type of the respondent (employed by the government, by a private company, a nonprofit organization, or self-employed). This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- **workfullpart**: indicates whether the respondent works full or part-time. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- **hourswork**: indicates the number of hours the respondent works per week. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- **hhincome**: is the total combined income of all members of the respondent's household (living in their household) during the past 12 months.
- **anyhhmember**: indicates whether there were any members in the respondent's household at the time he/she answered the survey as reported by the respondent.
- **hhmembervnumber**: indicates the number of household members in the respondent's household at the time of the survey as reported by the respondent. It may be that 'anyhhmember' is 'Yes', but 'hhmembervnumber' is missing if the respondent did not provide the number of household members at the time of the survey.
- **hhmemberin_#**: indicates whether a household member is currently in the household as reported by the respondent. Household members are never removed from the stored household roster and their information is always included in survey data sets. The order of the roster is the same order in which household members were specified by the respondent in the 'MyHousehold' survey. The order is identified by the suffix _# (e.g., _1 indicates the first household member, _2 the second household member, etc.).

As an example, if the first household member is in the household at the time of the survey, 'hhmemberin_1' is set to '1 HH Member 1 is in the HH'; if he/she has moved out, 'hhmemberin_1' is set to '0 HH member 1 is no longer in the HH'. Since information of other household members (stored in the variables listed below) is always included in survey data sets, information about 'hhmemberin_1' is available whether this person is still in the household or has moved out.

- **hhmembergen_#**: indicates the gender of another household member as reported by the respondent.
- **hhmemberage_#**: indicates the age of another household member. The age is derived from the month and year of birth of the household member as reported by the respondent.
- **hhmemberrel_#**: indicates the relationship of the respondent to the other household member as reported by the respondent.

- **hhmemberuasid_#**: is the 'uasid' of the other household member if this person is also a UAS panel member. It is set to missing (.) if this person is not a UAS panel member at the time of the survey. Since this identifier is directly reported by the respondent (chosen from a preloaded list), it may differ from the actual (correct) 'uasid' of the UAS member it refers to because of reporting error. Also, this variable should not be used to identify UAS members in a given household at the time of the survey. This is because the variables 'hhmemberuasid_#' are taken from the most recent 'My Household' and changes in household composition involving UAS members may have occurred between the time of the respondent answered 'My Household' and the time the respondent answers the survey. To follow UAS members of a given household, it is advised to use the identifiers 'uashhid' and 'survhhid'.
- **lastmyhh_date**: the date on which the demographics variables were collected through the 'My Household' survey.

5 MISSING DATA CONVENTIONS

Data files provide so-called clean data, that is, answers given to questions that are not applicable anymore at survey completion (for example because a respondent went back in the survey and skipped over a previously answered question) are treated as if the questions were never asked. In the data files all questions that were asked, but not answered by the respondent are marked with (.e). All questions never seen by the respondent (or any dirty data) are marked with (.a). The latter may mean that a respondent did not view the question because s/he skipped over it; or alternatively that s/he never reached that question due to a break off. If a respondent did not complete a survey, the variables representing survey end date and time are marked with (.c). Household member variables are marked with (.m) if the respondent has less household members (e.g. if the number of household members is 2, any variables for household member 3 and up are marked with (.m)).

UAS provides data in STATA and CSV format. Stata data sets come with include variable labels that are not available in the CSV files. Value labels are provided for single-response answer option. In STATA these labels will include the labels 'Not asked' and 'Not answered' for (.a) and (.e), and will show in tabulations such as 'tab q1, missing'. For multiple-response questions a binary variable is created for each answer option indicating whether the option was selected or not. A summary variable is also provided in string format reflecting which options were selected and in which order. For example, if a question asked about favorite animals with options cat, dog, and horse, then if a respondent selected horse and then cat, the binary variables for horse and cat will be set to yes, while the overall variable would have a string value of '3-1'. If no answer was given, all binary variables and the summary variable will be marked with '.e'.

Questions that are asked multiple times are often implemented as so-called array questions. Supposing the name of such question was Q1 and it was asked in 6 different instances, your data set would contain the variables Q1_1_ to Q1_6_. To illustrate, if a survey asked the names of all children, then child_1_ would contain the name of the first child the respondent named and so on.

More information about the UAS data in general can be found on the UAS Data Pages web site.

6 ROUTING SYNTAX

The survey with routing presented in the next section includes all of the questions that make up this survey, the question answers when choices were provided, and the question routing. The routing includes descriptions of when questions are grouped, conditional logic that determines when questions are presented to the respondent, randomization of questions and answers, and fills of answers from one question to another.

If you are unfamiliar with conditional logic statements, they are typically formatted so that **if** the respondent fulfills some condition (e.g. they have a cellphone or a checking account), **then** they are presented with some other question or the value of some variable is changed. If the respondent does not fulfill the condition (e.g. they are not a cellphone adopter or they do not have a checking account), something **else** happens such as skipping the next question or changing the variable to some other value. Some of the logic involved in the randomization of questions or answers being presented to the respondent is quite complex, and in these instances there is documentation to clarify the process being represented by the routing.

Because logic syntax standards vary, here is a brief introduction to our syntax standards. The syntax used in the conditional statements is as follows: '=' is equal to, '<' is less than, '>' is greater than, and '!= ' is used for does not equal. When a variable is set to some number N, the statement looks like 'variable := N'.

The formatting of the questions and routing are designed to make it easier to interpret what is occurring at any given point in the survey. Question ID is the bold text at the top of a question block, followed by the question text and the answer selections. When a question or variable has associated data, the name links to the appropriate data page, so you can easily get directly to the data. Text color is used to indicate the routing: **red** is conditional logic, **gold** is question grouping, **green** is looping, and **orange** is used to document randomization and other complex conditional logic processes. The routing is written for a computer to parse rather than a human to read, so when the routing diverges significantly from what is displayed to the respondent, a screenshot of what the respondent saw is included.

The name of the randomization variables are defined in proximity to where they are put into play, and like the question ID the names of the randomization variables can be used to link directly to the associated data page.

7 SURVEY WITH ROUTING

intro1 (intro in section Base)

In this survey we will be asking you questions about a number of different topics. We will also be asking a number of questions about how you see yourself. Enjoy!

IF **osplacement** = EMPTY THEN

| **osplacement** := mt_rand(1,2)

END OF IF

/* The subjective well being questions in this survey are either asked at the beginning or at the end of the survey depending on the value of the **osplacement** variable (1 is at the beginning, 2 is at the end). */

IF **osplacement** = 1 THEN

Start of section **Wellbeing**

OS_intro (INTRO ONS in section Wellbeing)

This part of the survey focuses on how you feel about certain aspects of your life, as well as feelings you may have experienced yesterday. You can answer all those questions on a scale from 0 to 10, where 0 means "not at all", and 10 "completely", or "very strongly".

/* The respondent is presented with the next two questions in a random order, that is captured in the **OSrand** variable. */

IF **OSrand** = EMPTY THEN

| **OSrand** := mt_rand(1,2)

END OF IF

IF **OSrand** = 1 THEN

Start of section **Financialliteracy**

D_intro (D intro in section Financialliteracy)
We would like to begin the following part of the survey with a few general financial questions.

L001 (\$100 2% in section Financialliteracy)

Suppose you had \$100 in a savings account and the interest rate was 2% per year. After 5 years, how much do you think you would have in the account if you left the money to grow: more than \$102, exactly \$102, less than \$102?

- 1 More than \$102
- 2 Exactly \$102
- 3 Less than \$102
- 4 I don't know

L002 (\$100 20% in section Financial literacy)

Suppose you had \$100 in a savings account and the interest rate was 20% per year and you never withdraw money or interest payments. After 5 years, how much would you have on this account in total?

- 1 More than \$200
- 2 Exactly \$200
- 3 Less than \$200
- 4 I don't know

L003 (\$100 20% in section Financial literacy)

Imagine that the interest rate on your savings account was 1% per year and inflation was 2% per year. After 1 year, would you be able to buy more than, exactly the same as, or less than today with the money in this account?

- 1 More than today
- 2 Exactly the same as today
- 3 Less than today
- 4 I don't know

L004 (inheritance in section Financial literacy)

Assume a friend inherits \$10,000 today and his sibling inherits \$10,000 but 3 years from now. Who is richer today because of the inheritance?

- 1 My friend
- 2 His sibling
- 3 They are equally rich
- 4 I don't know

L005 (doubled in section Financial literacy)

Suppose that in the year 2020, your income has doubled and prices of all goods have doubled too. In 2020, will you be able to buy more, the same or less than today with your income?

- 1 Buy more than today
- 2 Buy the same as today
- 3 Buy less than today
- 4 I don't know

D001 (stock market in section Financial literacy)

Which of the following statements describes the main function of the stock market?

- 1 The stock market helps to predict stock earnings
- 2 The stock market results in an increase in the price of stocks
- 3 The stock market brings people who want to buy stocks together with those who want to sell stocks
- 4 None of the above
- 5 I don't know

D002 (mutual fund in section Financialliteracy)

Which of the following statements is correct?

- 1 Once one invests in a mutual fund, one cannot withdraw money in the first year
- 2 Mutual funds can invest in several assets, for example invest in both stocks and bonds
- 3 Mutual funds pay a guaranteed rate of return which depends on their past performance
- 4 None of the above
- 5 I don't know

/ Respondents are randomly asked about either the rise (1) or fall (2) of interest rates in question P001 based on the following randomizer. */*

IF P001_randomizer = EMPTY THEN

| P001_randomizer := mt.rand(1,2)

END OF IF

/ Respondents are randomly asked about the safety of purchasing either single company (1) or stock market fund (2) in question P002 based on the following randomizer. */*

IF P002_randomizer = EMPTY THEN

| P002_randomizer := mt.rand(1,2)

END OF IF

/ Respondents are randomly asked about whether stocks are riskier than bonds (1) or bonds are riskier than stocks (2) in question P003 based on the following randomizer. */*

IF P003_randomizer = EMPTY THEN

| P003_randomizer := mt.rand(1,2)

END OF IF

Fill code of question FL_P001 executed

P001 (interest rates change in section Financialliteracy)

If the interest rates (rise/fall), what should happen to bond prices?

- 1 They should rise
- 2 They should fall
- 3 They should stay the same
- 4 I don't know

Fill code of question FL_P002 executed
Fill code of question FL_P002.2 executed

P002 (safer in section Financialliteracy)

Do you think the following statement is true?

Buying a (single company/stock mutual fund) usually provides a safer return than a (single company/stock mutual fund).

- 1 True
- 2 False
- 3 Don't know

Fill code of question FL_P003 executed
Fill code of question FL_P003.2 executed

P003 (riskier in section Financialliteracy)

Do you think that the following statement is true or false?

(Stocks/Bonds) are normally riskier than (stocks/bonds).

- 1 True
- 2 False
- 3 Don't know

P004 (highest return in section Financialliteracy)

Considering a long period (for example 10 or 20 years), what normally gives the highest return?

- 1 Savings accounts
- 2 Bonds
- 3 Stocks
- 4 I don't know

P005 (highest fluctuations in section Financialliteracy)

Normally, which asset described below displays the highest fluctuations over time: savings accounts, bonds or stocks?

- 1 Savings accounts
- 2 Bonds
- 3 Stocks
- 4 I don't know

P006 (different assets in section Financialliteracy)

When an investor spreads his or her money among different assets, does the risk of losing a lot of money increase, decrease, or stay the same?

- 1 Increase
- 2 Decrease
- 3 Stay the same
- 4 I don't know

P007 (housing prices in section Financialliteracy)

Is the following statement true?

Housing prices in the US can never go down.

- 1 True
- 2 False
- 3 I don't know

End of section **Financialliteracy**

Start of section **Bigfive**

bif_intro (Section Bigfive)

Here are a number of questions about yourself; there are no right or wrong answers. Please just answer to the best of your ability.

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

bif_intro2 (Section Bigfive)

I am someone who...

SUBGROUP OF QUESTIONS

bif001 (talkative in section Bigfive)

Is talkative.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little
- 5 Agree strongly

bif002 (finds fault with others in section Bigfive)

Tends to find fault with others.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little
- 5 Agree strongly

bif003 (does thorough job in section Bigfive)

Does a thorough job.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little

5 Agree strongly

bif004 (is depressed in section Bigfive)

Is depressed, blue.

1 Disagree strongly

2 Disagree a little

3 Neither Agree nor Disagree

4 Agree a little

5 Agree strongly

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

bif_intro2 (Section Bigfive)

I am someone who...

SUBGROUP OF QUESTIONS

bif009 (is relaxed in section Bigfive)

Is relaxed, handles stress well.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little
- 5 Agree strongly

bif010 (is curious in section Bigfive)

Is curious about many different things.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little
- 5 Agree strongly

bif011 (is full of energy in section Bigfive)

Is full of energy.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little
- 5 Agree strongly

bif012 (starts quarrels in section Bigfive)

Starts quarrels with others.

- 1 Disagree strongly
- 2 Disagree a little
- 3 Neither Agree nor Disagree
- 4 Agree a little
- 5 Agree strongly

END OF SUBGROUP

END OF GROUP

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

bif_intro2 (Section Bigfive)
I am someone who...

END OF SUBGROUP

END OF GROUP

End of section **Bigfive**

Start of section **Admc**

admc_intro (intro admc in section Admc)

We will now ask you a number of questions that ask for your best guess at the chance that something will happen in the future. They use the "probability" scale that you see below. If you did not indicate an answer before, the scale will appear empty:

To select a value please click anywhere on the scale, as follows:

You can also drag the 'blue ball marker' to select a value. You will see the value change as you are moving the marker. If you think that something has no chance of happening, mark it as having a 0% chance. If you think that something is certain to happen, mark it as having a 100% chance.

Just to make sure that you are comfortable with the scale, please answer the following practice questions.

admc1 (probability eat pizza next year in section Admc)

What is the percent chance that you will eat pizza during *the next year*?

RANGE 0..100

admc2 (probability flu next year in section Admc)

What is the percent chance that you will get the flu during *the next year*?

RANGE 0..100

admc_intro2 (Section Admc)

This is the end of the practice questions.

We will now ask about events that may happen some time during *the next year*.

admc3 (probability car accident next year in section Admc)

What is the percent chance that you will get into a car accident while driving during *the next year*?

RANGE 0..100

admc4 (probability cavity filled next year in section Admc)

What is the percent chance that you will have a cavity filled during *the next year*?

RANGE 0..100

admc6 (probability stolen from next year in section Admc)

What is the percent chance that someone will steal something from you during *the next year*?

RANGE 0..100

admc7 (probability move to other state next year in section Admc)

What is the percent chance that you will move your permanent address to another state some time during *the next year*?

RANGE 0..100

admc9 (probability break into home next year in section Admc)

What is the percent chance that someone will break into your home and steal something from you during *the next year*?

RANGE 0..100

admc10 (probability stay in same state next year in section Admc)

What is the percent chance that you will keep your permanent address in the same state during *the next year*?

RANGE 0..100

admc11 (probability dentist visit next year in section Admc)

What is the percent chance that you will visit a dentist, for any reason, during *the next year*?

RANGE 0..100

admc12 (probability driving accident free next year in section Admc)

What is the percent chance that your driving will be accident-free during *the next year*?

RANGE 0..100

admc_switch (Section Admc)

Now we are going to ask you some questions about the likelihood of something happening or not *during the next 5 years*.

admc13 (probability car accident next 5 years in section Admc)

What is the percent chance that you will get into a car accident while driving during *the next 5 years*?

RANGE 0..100

admc14 (probability cavity filled next 5 years in section Admc)

What is the percent chance that you will have a cavity filled during *the next 5 years*?

RANGE 0..100

admc16 (probability stolen from next 5 years in section Admc)

What is the percent chance that someone will steal something from you during *the next 5 years*?

RANGE 0..100

admc17 (probability move to other state next 5 years in section Admc)

What is the percent chance that you will move your permanent address to another state some time during *the next 5 years*?

RANGE 0..100

admc19 (probability break into home next 5 years in section Admc)

What is the percent chance that someone will break into your home and steal something from you during *the next 5 years*?
RANGE 0..100

admc20 (probability stay in same state next 5 years in section Admc)
What is the percent chance that you will keep your permanent address in the same state during *the next 5 years*?
RANGE 0..100

admc21 (probability dentist visit next 5 years in section Admc)
What is the percent chance that you will visit a dentist, for any reason, during *the next 5 years*?
RANGE 0..100

admc22 (probability driving accident free next 5 years in section Admc)
What is the percent chance that your driving will be accident-free during *the next 5 years*?
RANGE 0..100

End of section **Admc**

Start of section **Lipkus**

lipkus_intro (Section Lipkus)
In the next series of questions we are going to ask you to answer some math questions. Please don't use a calculator.

lip001 (number of times dice even in section Lipkus)
Imagine that we roll a fair, six-sided die 1,000 times. Out of 1,000 rolls, how many times do you think the die would come up as an even number?
RANGE 0..1000

lip002 (number of people winning lottery in section Lipkus)
In the BIG BUCKS LOTTERY, the chances of winning a \$10.00 prize are 1%. What is your best guess about how many people would win a \$10.00 prize if 1,000 people each buy a single ticket from BIG BUCKS?

RANGE 0..1000

lip003 (percent of tickets win car in section Lipkus)
In the ACME PUBLISHING SWEEPSTAKES, the chance of winning a car is 1 in 1,000. What percent of tickets of ACME PUBLISHING SWEEPSTAKES win a car?

RANGE 0.0..100.0

lip008 (how many people disease chance 10% in section Lipkus)

If the chance of getting a disease is 10%, how many people would be expected to get the disease out of 1000?

RANGE 0..1000

lip009 (chance of getting disease in section Lipkus)

If the chance of getting a disease is 20 out of 100, this would be the same as having how much of a percent chance of getting the disease?

RANGE 0..9223372036854775807

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

lip012 (likelihood of tumor in section Lipkus)

Suppose you have a close friend who has a lump in her breast and must have a mammogram. Of 100 women like her, 10 of them actually have a malignant tumor and 90 of them do not. Of the 10 women who actually have a tumor, the mammogram indicates correctly that 9 of them have a tumor and indicates incorrectly that 1 of them does not have a tumor. Of the 90 women who do not have a tumor, the mammogram indicates correctly that 80 of them do not have a tumor and indicates incorrectly that 10 of them do have a tumor. The table below summarizes all of this information.

	Tested positive	Tested negative	Totals
Actually has a tumor	9	1	10
Does not have a tumor	10	80	90
Totals	19	81	100

Imagine that your friend tests positive (as if she had a tumor), what is the likelihood that she actually has a tumor?

OS_intro (INTRO ONS in section Wellbeing)

This part of the survey focuses on how you feel about certain aspects of your life, as well as feelings you may have experienced yesterday. You can answer all those questions on a scale from 0 to 10, where 0 means "not at all", and 10 "completely", or "very strongly".
