UnderStandingAmericaStudy

UAS 197: JULY 2019 MONTHLY SURVEY: PRESCRIPTION OPIOIDS, U.S. ELECTIONS, MASS SHOOTINGS

Survey author(s): Lila Rabinovich, Joanne Yoon, Doerte Junghaenel, Robert Shrum, Daniel Bennett

Fielded July 12, 2019 - August 11, 2019
1 INTRODUCTION

This UAS Survey, titled “UAS 197 July 2019 Monthly Survey: Prescription opioids, U.S. Elections, Mass shootings” has several unrelated modules. It asks respondents about prescription opioids, opinions related to politics, and feelings about mass shootings. This survey is no longer in the field. Respondents were paid $4 to complete the survey.

1.1 Topics

This survey contains questions (among others) on the following topics: Environment, Health, Politics. A complete survey topic categorization for the UAS can be found here.

1.2 Experiments

This survey includes experiment(s) of the following type(s): Auxiliary Randomization. Please refer to explanatory comments in the Routing section for detailed information. A complete survey experiment categorization for the UAS can be found here.

1.3 Citation

Each publication, press release or other document that cites results from this survey must include an acknowledgment of UAS as the data source and a disclaimer such as, ‘The project described in this paper relies on data from survey(s) administered by the Understanding America Study, which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC or UAS.’ For any questions or more information about the UAS, contact Tania Gutsche, Project and Panel Manager, Center for Economic and Social Research, University of Southern California, at tgutsche@usc.edu.
2 SURVEY RESPONSE AND DATA

2.1 Sample selection and response rate

The sample selection for this survey was:

All active respondents.

As such, this survey was made available to 7658 UAS participants. Of those 7658 participants, 5764 completed the survey and are counted as respondents. Of those who are not counted as respondents, 38 started the survey without completing and 1856 did not start the survey. The overall response rate was 75.27%.

Note: We are unable to provide sample weights for a small number of UAS members (see the Sample weighting section below for details). If they completed the survey, these members are included in the data set with a weight of zero, but accounted for in the computation of total sample size and survey response rate.%.

The detailed survey response rate is as follows:

<table>
<thead>
<tr>
<th>UAS197 - Response Overview</th>
</tr>
</thead>
<tbody>
<tr>
<td>Size of selected sample</td>
</tr>
<tr>
<td>Completed the survey</td>
</tr>
<tr>
<td>Started but did not complete the survey</td>
</tr>
<tr>
<td>Did not start the survey</td>
</tr>
<tr>
<td>Response rate</td>
</tr>
</tbody>
</table>

2.2 Timings

The survey took respondents an average of 8 minutes, and the full distribution of survey response times is available in the figure below. Times per question are available upon request.
2.3 Sample & Weighting

Weights are included in the data set for this survey. This survey dataset may contain respondents with a weight of zero. These respondents belong to a small group of UAS members for whom sample weights cannot be computed due to non-probability recruitment for special projects. Hence, while they are accounted for in the total number of survey respondents, they do not contribute to any statistics using sample weights. For more details on the UAS weighing procedures please refer to the [UAS Weighting Procedures V1]. Please contact UAS staff with any questions.
3 STANDARD VARIABLES

Each Understanding America Study data contains a series of standard variables, consisting of individual, household and sample identifiers, language indicator, time stamps and a rating by the respondent of how much he or she liked the survey:

- **uasid**: the identifier of the respondent. This identifier is assigned to a respondent at recruitment and stays with the respondent throughout each and every survey he/she participates in. When analyzing data from multiple surveys, the ‘uasid’ can be used to merge data sets.

- **uashhid**: the household identifier of the respondent. Every member is assigned a household identifier, stored in the variable ‘uashhid’. For the primary respondent this identifier equals his or her ‘uasid’. All other eligible members of the primary respondent’s household (everyone who is 18 or older in the household) who become UAS respondents receive the ‘uasid’ of the primary respondent as their household identifier. The identifier ‘uashhid’ remains constant over time for all respondents. Thus it is always possible to find the original UAS household of an UAS panel member (even after they, for example, have moved out to form another household).

- **survhhid**: uniquely identifies the household a UAS panel member belongs to in a given survey. For instance, if the primary respondent and his/her spouse are both UAS members at the time of a given survey, they both receive the same ‘survhhid’ identifier for that survey. If they subsequently split, they receive two different ‘survhhid’ in subsequent surveys. They, however, always share the same ‘uashhid’. The identifier ‘survhhid’ is set to missing (.) if no other household members are UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart if the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, household members have different ‘survhhid’ reflecting different household compositions at the time they answered the survey. For instance, suppose that the primary respondent and his/her spouse are both UAS members. If the primary respondent answers the survey when he/she is living with the spouse, but the spouse answers the survey when the couple has split, they receive different ‘survhhid’. Hence, the variable ‘survhhid’ identifies household membership of UAS panel members, at the time the respondent answers the survey. Note: in the My Household survey ‘survhhid’ is set to unknown (,u) for respondents who last participated in the My Household survey prior to January 21, 2015.

- **uasmembers**: is the number of other household members who are also UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart is the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, the primary respondent of a household has a value of ‘0’, whereas the second UAS household respondent has a value of ‘1’. Therefore ‘uasmembers’ should be interpreted as the
number of household and UAS panel members at the time the respondent answers the survey. Note: in the My Household survey ‘uasmembers’ is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.

- **sampletype** indicates the sampling frame from which the household of the respondent was recruited. All UAS recruitment is done through address based sampling (ABS) in which samples are acquired based on postal records. Currently, the variable ‘sampletype’ takes on three values reflecting three distinct recruitment categories (in future data sets the number of categories may increase due to the incorporation of new recruitment categories):

  1. Nationally Representative Sample
  2. Native Americans: recruited through ABS, where the probability of drawing a zip-code is a function of the percentage of Native Americans in the zip-code. Primary respondents in these zip-codes who are not Native Americans are not invited to join the UAS.
  3. LA County: recruited through ABS drawing from zip-codes in Los Angeles County.

- **batch** indicates the batch from which the respondent was recruited. There are currently the following values this variable takes (in future data sets the number of categories may increase due to the usage of new recruitment samples):

  2. ASDE 2014/01 Native Am.
  3. ASDE 2014/11 Native Am.
  4. LA County 2015/05 List Sample
  12. MSG 2016/05 Nat.Rep. Batch 8
  13. MSG 2016/08 LA County Batch 2
  14. MSG 2017/03 LA County Batch 3
  15. MSG 2017/11 California Batch 1
  16. MSG 2018/02 California Batch 2
primary_respondent: indicates if the respondent was the first person within the household (i.e. to become a member or whether s/he was added as a subsequent member. A household in this regard is broadly defined as anyone living together with the primary respondent. That is, a household comprises individuals who live together, e.g. as part of a family relationship (like a spouse/child/parent) or in context of some other relationship (like a roommate or tenant).

hardware: indicates whether the respondent ever received hardware or not. Note: this variable should not be used to determine whether a respondent received hardware at a given point in time and/or whether s/he used the hardware to participate in a survey. Rather, it indicates whether hardware was ever provided:

1. None
2. Tablet (includes Internet)

language: the language in which the survey was conducted. This variable takes a value of 1 for English and a value of 2 for Spanish.

start_date (start_year, start_month, start_day, start_hour, start_min, start_sec): indicates the time at which the respondent started the survey.

end_date (end_year, end_month, end_day, end_hour, end_min, end_sec): indicates the time at which the respondent completed the survey.

cs_001: indicates how interesting the respondent found the survey.
4 BACKGROUND DEMOGRAPHICS

Every UAS survey data set includes demographic variables, which provide background information about the respondent and his/her household. Demographic information such as age, ethnicity, education, marital status, work status, state of residence, family structure is elicited every quarter through the “My Household” survey. The demographic variables provided with each survey are taken from the most recent ‘MyHousehold’ survey answered by the respondent. If at the time of a survey, the information in “My Household” is more than three months old, a respondent is required to check and update his or her information before being able to take the survey.

The following variables are available in each survey data set:

- **gender**: the gender of the respondent.
- **dateofbirth_year**: the year of birth of the respondent.
- **age**: the age of the respondent at the start of the survey.
- **agerange**: if the respondent's age cannot be calculate due to missing information, ‘agerange’ indicates the approximate age. Should a value for both the ‘age’ and ‘agerange’ be present, then ‘age’ takes precedence over ‘agerange’.
- **citizenus**: indicates whether the respondent is a U.S. citizen.
- **bornus**: indicates whether the respondent was born in the U.S.
- **stateborn**: indicates the state in which the respondent was born. This is set to missing (.) if the respondent was not born in the U.S.
- **countryborn**: indicates the country in which the respondent was born. This is set to missing (.) if the respondent was born in the U.S.
- **countryborn_other**: indicates the country of birth if that country is not on the drop down list of countries shown to the respondent.
- **statereside**: the state in which the respondent is living.
- **immigration_status**: indicates whether the respondent is an immigrant. It takes one of the following values: 0 Non-immigrant, 1 First generation immigrant (immigrant who migrated to the U.S), 2 Second generation immigrant (U.S.-born children of at least one foreign-born parent), 3 Third generation immigrant (U.S.-born children of at least one U.S.-born parent, where at least one grandparent is foreign-born), or 4 Unknown immigrant status.
- **maritalstatus**: the marital status of the respondent.
- **livewithpartner**: indicates whether the respondent lives with a partner.
- **education**: the highest level of education attained by the respondent.
- **hisplatinio**: indicates whether the respondent identifies him or herself as being Hispanic or Latino. This variable is asked separately from race.
- **hisplatinogroup**: indicates which Hispanic or Latino group a respondent identifies him or herself with. This is set to missing (.) if the respondent does not identify him or herself as being Hispanic or Latino.
- **white**: indicates whether the respondent identifies him or herself as white (Caucasian).
- **black**: indicates whether the respondent identifies him or herself as black (African-American).
- **nativeamer**: indicates whether the respondent identifies him or herself as Native American (American Indian or Alaska Native).
- **asian**: indicates whether the respondent identifies him or herself as Asian (Asian-American).
- **pacific**: indicates whether the respondent identifies him or herself as Native Hawaiian or Other Pacific Islander.
- **race**: indicates the race of the respondent as singular (e.g., ‘1 White’ or ‘2 Black’) or as mixed (in case the respondent identifies with two or more races). The value ‘6 Mixed’ that the respondent answered ‘Yes’ to at least two of the single race categories. This variable is generated based on the values of the different race variables (white, black, nativeamer, asian, pacific). This composite measure is not conditional on hisplatinio, so an individual may identify as Hispanic or Latino, and also as a member of one or more racial groups.
- **working**: indicates whether the respondent is working for pay.
- **sick leave**: indicates whether the respondent is not working because sick or on leave.
- **unemp layoff**: indicates whether the respondent is unemployed or on lay off.
- **unemp look**: indicates whether the respondent is unemployed and looking for a job.
- **retired**: indicates whether the respondent is retired.
- **disabled**: indicates whether the respondent has a disability.
- **lf other**: specifies other labor force status.
- **laborstatus**: indicates the labor force status of the respondent as singular (e.g., ‘1 Working for pay’ or ‘2 On sick or other leave’) or as mixed (in case the respondent selects two or more labor statuses). The value ‘8 Mixed’ indicates that the respondent answered ‘Yes’ to at least two of the single labor force status variables. This variable is generated based on the values of the different labor status variables (working, sick leave, unemp layoff, unemp look, retired, disabled, lf other).
- **employmenttype**: indicates the employment type of the respondent (employed by the government, by a private company, a nonprofit organization, or self-employed). This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.

- **workfullpart**: indicates whether the respondent works full or part-time. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.

- **hourswork**: indicates the number of hours the respondent works per week. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.

- **hhincome**: is the total combined income of all members of the respondent’s household (living in their household) during the past 12 months.

- **anyhhmember**: indicates whether there were any members in the respondent’s household at the time he/she answered the survey as reported by the respondent.

- **hhmembernumber**: indicates the number of household members in the respondent’s household at the time of the survey as reported by the respondent. It may be that ‘anyhhmember’ is ‘Yes’, but ‘hhmembernumber’ is missing if the respondent did not provide the number of household members at the time of the survey.

- **hhmemberin_#**: indicates whether a household member is currently in the household as reported by the respondent. Household members are never removed from the stored household roster and their information is always included in survey data sets. The order of the roster is the same order in which household members were specified by the respondent in the ‘MyHousehold’ survey. The order is identified by the suffix _# (e.g., _1 indicates the first household member, _2 the second household member, etc.).

As an example, if the first household member is in the household at the time of the survey, ‘hhmemberin_1’ is set to ‘1 HH Member 1 is in the HH’; if he/she has moved out, ‘hhmemberin_1’ is set to ‘0 HH member 1 is no longer in the HH’. Since information of other household members (stored in the variables listed below) is always included in survey data sets, information about ‘hhmemberin_1’ is available whether this person is still in the household or has moved out.

- **hhmembergen_#**: indicates the gender of another household member as reported by the respondent.

- **hhmemberage_#**: indicates the age of another household member. The age is derived from the month and year of birth of the household member as reported by the respondent.

- **hhmemberrel_#**: indicates the relationship of the respondent to the other household member as reported by the respondent.
• `hhmemberuasid_#` is the ‘uasid’ of the other household member if this person is also a UAS panel member. It is set to missing (.) if this person is not a UAS panel member at the time of the survey. Since this identifier is directly reported by the respondent (chosen from a preloaded list), it may differ from the actual (correct) ‘uasid’ of the UAS member it refers to because of reporting error. Also, this variable should not be used to identify UAS members in a given household at the time of the survey. This is because the variables ‘hhmemberuasid_#’ are taken from the most recent ‘My Household’ and changes in household composition involving UAS members may have occurred between the time of the respondent answered ‘My Household’ and the time the respondent answers the survey. To follow UAS members of a given household, it is advised to use the identifiers ‘uashhid’ and ‘survhhid’.

• `lastmyhh_date` the date on which the demographics variables were collected through the ‘My Household’ survey.
5 MISSING DATA CONVENTIONS

Data files provide so-called clean data, that is, answers given to questions that are not applicable anymore at survey completion (for example because a respondent went back in the survey and skipped over a previously answered question) are treated as if the questions were never asked. In the data files all questions that were asked, but not answered by the respondent are marked with (.e). All questions never seen by the respondent (or any dirty data) are marked with (.a). The latter may mean that a respondent did not view the question because s/he skipped over it; or alternatively that s/he never reached that question in the survey due to a survey break off.

If a respondent did not complete a survey, the variables representing survey end date and time are marked with (.c). Household member variables are marked with (.m) if the respondent has less household members (e.g. if the number of household members is 2, any variables for household member 3 and up are marked with (.m).

UAS provides data in STATA and CSV format. Stata data sets come with include variable labels that are not available in the CSV files. Value labels are provided for single-response answer option. In STATA these labels will include the labels ‘Not asked’ and ‘Not answered’ for (.a) and (.e), and will show in tabulations such as ‘tab q1, missing’. For multiple-response questions a binary variable is created for each answer option indicating whether the option was selected or not. A summary variable is also provided in string format reflecting which options were selected and in which order. For example, if a question asked about favorite animals with options cat, dog, and horse, then if a respondent selected horse and then cat, the binary variables for horse and cat will be set to yes, while the overall variable would have a string value of ‘3-1’. If no answer was given, all binary variables and the summary variable will be marked with ‘.e’.

Questions that are asked multiple times are often implemented as so-called array questions. Supposing the name of such question was Q1 and it was asked in 6 different instances, your data set would contain the variables Q1.1. to Q1.6.. To illustrate, if a survey asked the names of all children, then child_1. would contain the name of the first child the respondent named and so on.

More information about the UAS data can be found in the UAS Data Guide available on the UAS Data Pages web site.
6 ROUTING SYNTAX

The survey with routing presented in the next section includes all of the questions that make up this survey, the question answers when choices were provided, and the question routing. The routing includes descriptions of when questions are grouped, conditional logic that determines when questions are presented to the respondent, randomization of questions and answers, and fills of answers from one question to another.

If you are unfamiliar with conditional logic statements, they are typically formatted so that if the respondent fulfills some condition (e.g. they have a cellphone or a checking account), then they are presented with some other question or the value of some variable is changed. If the respondent does not fulfill the condition (e.g. they are not a cellphone adopter or they do not have a checking account), something else happens such as skipping the next question or changing the variable to some other value. Some of the logic involved in the randomization of questions or answers being presented to the respondent is quite complex, and in these instances there is documentation to clarify the process being represented by the routing.

Because logic syntax standards vary, here is a brief introduction to our syntax standards. The syntax used in the conditional statements is as follows: ‘=’ is equal to, ‘<’ is less than, ‘>’ is greater than, and ‘!’=’ is used for does not equal. When a variable is set to some number N, the statement looks like ‘variable := N’.

The formatting of the questions and routing are designed to make it easier to interpret what is occurring at any given point in the survey. Question ID is the bold text at the top of a question block, followed by the question text and the answer selections. When a question or variable has associated data, the name links to the appropriate data page, so you can easily get directly to the data. Text color is used to indicate the routing: red is conditional logic, gold is question grouping, green is looping, and orange is used to document randomization and other complex conditional logic processes. The routing is written for a computer to parse rather than a human to read, so when the routing diverges significantly from what is displayed to the respondent, a screenshot of what the respondent saw is included.

The name of the randomization variables are defined in proximity to where they are put into play, and like the question ID the names of the randomization variables can be used to link directly to the associated data page.
7 SURVEY WITH ROUTING

This survey has several unrelated sections. It asks prescription drugs, politics, and your reactions to news events. To begin with...

Start of section Pain

In the next set of questions, we would like to know about your opinions of and experiences with prescription opioids. Opioids include medications like morphine, Oxycontin, Tylenol with codeine, Percocet, Vicodin, methadone, and Suboxone.

Has a doctor or healthcare professional ever prescribed opioids to you?
1 Yes, I am currently taking opioid medication that is prescribed by my doctor or healthcare professional.
2 Yes, I have previously taking opioid medication that was prescribed by my doctor or healthcare professional.
3 No, I have never been prescribed opioid medication by my doctor or healthcare professional.

IF p001 IN (1,2) THEN

What is/was the reason for the opioid prescription?
1 To manage an acute physical condition
2 To manage a chronic physical condition
3 Other

IF p002 = 1 THEN

Please describe this acute physical condition.
STRING

ELSEIF p002 = 2 THEN

Please describe this chronic physical condition.
STRING

ELSEIF p002 = 3 THEN

Please describe this other reason.
STRING

END OF IF
As you probably know, the risk of opioid dependence and misuse of opioid medication is of great concern to healthcare professionals and the opioid epidemic has affected the lives of millions of Americans. What is your personal view on opioid medication? (choose one option)
1 Prescription opioids are not as bad as people think, if used correctly
2 Prescription opioids are harmful and should be taken off the market
3 Prescription opioids are overprescribed and not very helpful to manage pain
4 I do not have an opinion on prescription opioids
5 Other, please describe:

People who become dependent on prescription opioids often do not tell their doctors or healthcare professional. In your view, what is the most important reason for this?
1 People think that there are no good alternatives and opioids are their best option to manage their condition.
2 People are afraid to tell their doctor or healthcare professional because they believe they will be viewed negatively by their doctors or healthcare providers
3 People do not know that dependency on opioids is a problem.
4 Other: please describe:

National efforts are underway to remedy the opioid epidemic and help the millions of Americans who suffer from opioid dependence and addiction. In your own words, what are the most important steps that need to be taken to remedy the opioid epidemic? Please feel free to write as little or as much as you like.

End of section Pain
The next set of questions are about the upcoming primaries and caucuses in advance of the 2020 presidential election.

IF citizenus = EMPTY THEN
  Are you a citizen of the United States?
  1 Yes
  2 No
END OF IF

IF citizenus = 1 THEN
  Regardless of if or how you are registered to vote, at this time, are you more closely aligned with...
  1 Democrats
  2 Republicans
  3 Independents (no political party)
  4 Libertarians
  5 Green party
  6 Some other party
  7 Not aligned with any political party

IF cf003 IN (3,7) THEN
  Generally speaking, do you lean more toward affiliating with Democrats or with Republicans?
  1 Lean toward affiliating with Democrats
  2 Lean toward affiliating with Republicans
  3 Do not lean toward either party
END OF IF

The presidential election state party primaries and caucuses will be held next year, in 2020. If you decide to vote in your state’s presidential primary or caucus, which party’s primary or caucus are you most likely to vote in, if any?
  1 Democratic party
  2 Republican party
  3 Green party
  4 Libertarian party
  5 Some other party
I am certain I will not vote in any of my state’s presidential primaries or caucuses.

IF cf004 = 1 THEN

/* The candidates in cf005 and cf006 are presented in random order per the cf005_order
variables with values (with cf006 only showing a subset of the candidates):

- 1 Michael Bennet (U.S. Senator, Colorado)
- 2 Joe Biden (Former U.S. Vice President)
- 3 Cory Booker (U.S. Senator, New Jersey)
- 4 Steve Bullock (Governor of Montana)
- 5 Pete Buttigieg (Mayor of South Bend, Indiana)
- 6 Julian Castro (Former U.S. Secretary of Housing and Urban Development)
- 7 Bill de Blasio (Mayor of New York City, New York)
- 8 John Delaney, (Former U.S. Representative, Maryland)
- 9 Tulsi Gabbard, (U.S. Representative, Hawaii)
- 10 Kirsten Gillibrand (U.S. Senator, New York)
- 11 Mike Gravel (Former U.S. Senator, Alaska)
- 12 Kamala Harris (U.S. Senator, California)
- 13 John Hickenlooper (Former Governor, Colorado)
- 14 Jay Inslee (Governor, Washington state)
- 15 Amy Klobuchar (U.S. Senator, Minnesota)
- 16 Wayne Messam (Mayor of Miramar, Florida)
- 17 Seth Moulton (U.S. Representative, Massachusetts)
- 18 Beto O’Rourke (Former U.S. Representative, Texas)
- 19 Tim Ryan (U.S. Representative, Ohio)
- 20 Joe Sestak (former U.S. Representative, Pennsylvania)
- 21 Tom Steyer (businessman and activist)
- 22 Bernie Sanders (U.S. Senator, Vermont)
- 23 Elizabeth Warren (U.S. Senator, Massachusetts)
- 24 Marianne Williamson (Spiritual teacher, author, lecturer, entrepreneur, and ac-
Here is a list of candidates who are running for the Democratic nomination in 2020. If your state’s Democratic presidential primary or caucus were held today, for which of these candidates would you vote?

1. Michael Bennet (U.S. Senator, Colorado)
2. Joe Biden (Former U.S. Vice President)
3. Cory Booker (U.S. Senator, New Jersey)
4. Steve Bullock (Governor of Montana)
5. Pete Buttigieg (Mayor of South Bend, Indiana)
6. Julian Castro (Former U.S. Secretary of Housing and Urban Development)
7. Bill de Blasio (Mayor of New York City, New York)
8. John Delaney, (Former U.S. Representative, Maryland)
9. Tulsi Gabbard, (U.S. Representative, Hawaii)
10. Kirsten Gillibrand (U.S. Senator, New York)
11. Mike Gravel (Former U.S. Senator, Alaska)
12. Kamala Harris (U.S. Senator, California)
13. John Hickenlooper (Former Governor, Colorado)
14. Jay Inslee (Governor, Washington state)
15. Amy Klobuchar (U.S. Senator, Minnesota)
16. Wayne Messam (Mayor of Miramar, Florida)
17. Seth Moulton (U.S. Representative, Massachusetts)
18. Beto O’Rourke (Former U.S. Representative, Texas)
19. Tim Ryan (U.S. Representative, Ohio)
20. Joe Sestak (former U.S. Representative, Pennsylvania)
Regardless of which candidate you would vote for today, which candidate do you think has the best chance of winning against Donald Trump in November?

1. Michael Bennet (U.S. Senator, Colorado)
2. Joe Biden (Former U.S. Vice President)
3. Cory Booker (U.S. Senator, New Jersey)
4. Steve Bullock (Governor of Montana)
5. Pete Buttigieg (Mayor of South Bend, Indiana)
6. Julian Castro (Former U.S. Secretary of Housing and Urban Development)
7. Bill de Blasio (Mayor of New York City, New York)
8. John Delaney, (Former U.S. Representative, Maryland)
9. Tulsi Gabbard, (U.S. Representative, Hawaii)
10. Kirsten Gillibrand (U.S. Senator, New York)
11. Mike Gravel (Former U.S. Senator, Alaska)
12. Kamala Harris (U.S. Senator, California)
13. John Hickenlooper (Former Governor, Colorado)
14. Jay Inslee (Governor, Washington state)
15. Amy Klobuchar (U.S. Senator, Minnesota)
16. Wayne Messam (Mayor of Miramar, Florida)
17. Seth Moulton (U.S. Representative, Massachusetts)
18. Beto O’Rourke (Former U.S. Representative, Texas)
19. Tim Ryan (U.S. Representative, Ohio)
20. Joe Sestak (former U.S. Representative, Pennsylvania)
21. Tom Steyer (businessman and activist)
22. Bernie Sanders (U.S. Senator, Vermont)
23. Elizabeth Warren (U.S. Senator, Massachusetts)
24. Marianne Williamson (Spiritual teacher, author, lecturer, entrepreneur, and activist)
25. Andrew Yang (Entrepreneur and founder of Venture for America)
26. Other candidate (please write in):
(other who best chance winning against Trump in section Primary)

IF cf003 = 2 OR (cf003 IN (3,7) AND cf003a = 2) THEN

Which of the following most closely describes your wishes for the future of the Republican party?
1 The Republican party should become more traditionally conservative, stressing fiscal responsibility, defense, and pro-business policies.
2 The Republican party should become more populist, stressing issues like strong borders, protecting jobs from foreign competition, and standing tough against crime and social disorder.
3 The Republican party should stay the same as it is

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

The following is a of groups or individuals who may have some influence in the Republican party. For each one, please indicate whether you would like to see that group or individual have more influence in the Republican party, less influence, or do you think their current level of influence is about right?

SUBGROUP OF QUESTIONS

Evangelical Christian leaders
1 More influence
2 Less influence
3 About the right amount of influence

Business executives
1 More influence
2 Less influence

ma001 (hear about mass shootings in section Mass)
Many people have been killed in mass shootings in recent years. Recent shootings have happened at: The Virginia Beach Municipal Center (May 31, 2019) A nightclub in Thousand Oaks, California (November 7, 2018) The Marjorie Stoneman Douglas High School in Parkland, Florida (February 14, 2018) A music festival in Las Vegas, Nevada (October 1, 2017) The Pulse Nightclub in Orlando, Florida (June 12, 2016) Did you hear about these or any other mass shootings at the time that they happened?
1 Yes
2 No
3 Unsure

IF ma001 = 1 THEN

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

ma002_intro (Section Mass)
Think about the mass shooting that you can recall the best (whether or not it is listed above). Check all the ways in which the shooting affected you in the 2-3 days after it happened:

Compared to my usual routine:

SUBGROUP OF QUESTIONS

23
ma002a (sleep change in section Mass)
I slept
1 Less than usual
2 Same as usual
3 More than usual
4 Not applicable or do not recall

ma002b (felt scared change in section Mass)
I felt scared
1 Less than usual
2 Same as usual
3 More than usual
4 Not applicable or do not recall

ma002c (felt sad change in section Mass)
I felt sad
1 Less than usual
2 Same as usual
3 More than usual
4 Not applicable or do not recall
