1 INTRODUCTION

UAS311 is the consent survey associated with participation in a project funded by an administrative supplement to the U01 “Toward Next Generation Data on Health and Life Changes at Older Ages” (5U01AG054580) to create cognitive categories in the Understanding America Study (UAS) for classifying dementia status. The survey introduces participants to the project and obtains their consent decision. The project randomizes participants to either complete Health and Retirement Study (HRS) section D online or over the telephone, then to take the survey again using the other mode, one month later. This survey is no longer in the field. Respondents were paid \$2 to complete the survey.

The online survey associated with this project is UAS227. The telephone survey was conducted by Davis Research of Calabasas, CA. The sample selection for this survey was custom in nature following these criteria:

- Individuals who were invited to UAS227 prior to ca. August 2020 were excluded.
- Age \geq 50.
- Only people who answer surveys in English.
- Only one person per hh, with priority for the older person (75+) or any IADL (in this order).
- All people age 75+ or any IADL were included.
- Within the remaining group (age 50-74, no IADL), stratified by age group (50-64, 65-74) and cognition (Q1, Q2, Q3+4) with an attempt to make these strata equal size; Due to sample limitations in some strata, everyone was invited and in others only a subset.

1.1 Topics

This survey contains questions (among others) on the following topics: Survey Methodology. A complete survey topic categorization for the UAS can be found [here](#).

1.2 Experiments

This survey did not include any experiments. A complete survey experiment categorization for the UAS can be found [here](#).

1.3 Citation

Each publication, press release or other document that cites results from this survey must include an acknowledgment of UAS as the data source and a disclaimer such as, 'The project described in this paper relies on data from survey(s) administered by the Understanding America Study, which is maintained by the Center for Economic and Social Research (CESR) at the University of Southern California. The content of this paper is solely the responsibility of the authors and does not necessarily represent the official views of USC or UAS.' For any questions or more information about the UAS, contact Tania Gutsche, Project and Panel Manager, Center for Economic and Social Research, University of Southern California, at tgutsche@usc.edu.

2 SURVEY RESPONSE AND DATA

2.1 Sample selection and response rate

The sample selection for this survey was:

A custom selection of active English speaking respondents.

As such, this survey was made available to 2400 UAS participants. Of those 2400 participants, 1903 completed the survey and are counted as respondents. Of those who are not counted as respondents, 77 started the survey without completing and 420 did not start the survey. The overall response rate was 79.29%.

Note: We are unable to provide sample weights for a small number of UAS members (see the Sample weighting section below for details). If they completed the survey, these members are included in the data set with a weight of zero, but accounted for in the computation of total sample size and survey response rate.%.

The detailed survey response rate is as follows:

UAS311 - Response Overview	
Size of selected sample	2400
Completed the survey	1903
Started but did not complete the survey	77
Did not start the survey	420
Response rate	79.29%

2.2 Timings

The survey took respondents an average of 5 minutes, and the full distribution of survey response times is available in the figure below. Times per question are available upon request.

Distribution of Respondents' Survey Response Times

2.3 Sample & Weighting

Sample weights for this survey are computed following the general UAS Weighting Procedure. Specifically, we use a two-step process where we first compute base weights, which correct for unequal probabilities of sampling UAS members, and then generate final, post-stratification weights, which align the sample to the reference population along certain socio-economic dimensions. These are gender (male/female), race and ethnicity (White/Black/Other/Hispanic/Native American), age (18-39/40-49/50/59/60+), education (High school or less/Some college/Bachelor or more), Census regions (Northeast/Midwest/West, excl. CA/CA, excl. LAC, LAC). Benchmark distributions for these variables are derived from the 6 most recent available Current Population Survey (CPS) Basic Monthly Survey with respect to the survey's completion date. The reference population considered for the weights is the U.S. population of adults age 18 and older.

This survey dataset may contain respondents with a weight of zero. These respondents belong to a small group of UAS members for whom sample weights cannot be computed due to non-probability recruitment for special projects. Hence, while they are accounted for in the total number of survey respondents, they do not contribute to any statistics using sample weights. More information is available from the UAS Weighting Procedure. Please contact UAS staff with any questions.

3 STANDARD VARIABLES

Each Understanding America Study data contains a series of standard variables, consisting of individual, household and sample identifiers, language indicator, time stamps and a rating by the respondent of how much he or she liked the survey:

- **uasid**: the identifier of the respondent. This identifier is assigned to a respondent at recruitment and stays with the respondent throughout each and every survey he/she participates in. When analyzing data from multiple surveys, the 'uasid' can be used to merge data sets.
- **uashhid**: the household identifier of the respondent. Every member is assigned a household identifier, stored in the variable 'uashhid'. For the primary respondent this identifier equals his or her 'uasid'. All other eligible members of the primary respondent's household (everyone who is 18 or older in the household) who become UAS respondents receive the 'uasid' of the primary respondent as their household identifier. The identifier 'uashhid' remains constant over time for all respondents. Thus it is always possible to find the original UAS household of an UAS panel member (even after they, for example, have moved out to form another household).
- **survhhid**: uniquely identifies the household a UAS panel member belongs to in a given survey. For instance, if the primary respondent and his/her spouse are both UAS members at the time of a given survey, they both receive the same 'survhhid' identifier for that survey. If they subsequently split, they receive two different 'survhhid' in subsequent surveys. They, however, always share the same 'uashhid'. The identifier 'survhhid' is set to missing (.) if no other household members are UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart if the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, household members have different 'survhhid' reflecting different household compositions at the time they answered the survey. For instance, suppose that the primary respondent and his/her spouse are both UAS members. If the primary respondent answers the survey when he/she is living with the spouse, but the spouse answers the survey when the couple has split, they receive different 'survhhid'. Hence, the variable 'survhhid' identifies household membership of UAS panel members, at the time the respondent answers the survey. Note: in the My Household survey 'survhhid' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.
- **uasmembers**: is the number of other household members who are also UAS panel members at the time of the survey. Since individuals can answer the same survey at different points in time (which can be relatively far apart if the survey is kept in the field for a prolonged time), it may be possible that, within the same data set, the primary respondent of a household has a value of '0', whereas the second UAS household respondent has a value of '1'. Therefore 'uasmembers' should be interpreted as the

number of household and UAS panel members at the time the respondent answers the survey. Note: in the My Household survey 'uasmembers' is set to unknown (.u) for respondents who last participated in the My Household survey prior to January 21, 2015.

- **sampleframe**: indicates the sampling frame from which the household of the respondent was recruited. All UAS recruitment is done through address based sampling (ABS) in which samples are acquired based on postal records. Currently, the variable 'sampleframe' takes on four values reflecting four distinct sample frames used by the UAS over the year (in future data sets the number of sample frames used for recruitment may increase if additional specific populations are targeted in future recruitment batches):
 1. U.S. National Territory: recruited through ABS within the entire U.S.
 2. Areas high concentration Nat Ame: recruited through ABS in areas with a high concentration of Native Americans in the zip-code. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
 3. Los Angeles County: recruited through ABS within Los Angeles County.
 4. California: recruited through ABS within California.

Note: prior to March 6, 2024 this variable was called sampletype and had the following value labels for the above list in UAS data sets:

1. Nationally Representative Sample: recruited through ABS within the entire U.S.
 2. Native Americans: recruited through ABS in areas with a high concentration of Native Americans. Within these batches, individuals who are not Native Americans are not invited to join the UAS.
 3. LA County: recruited through ABS within Los Angeles County.
 4. California: recruited through ABS within California.
- **batch**: indicates the batch from which the respondent was recruited. Currently, this variable takes the following values (in future data sets the number of batches may increase as new recruitment batches are added to the UAS):
 1. ASDE 2014/01
 2. ASDE 2014/01
 3. ASDE 2014/01
 4. Public records 2015/05
 5. MSG 2015/07

33. MSG 2023-09 Native Am. Batch 3
34. MSG 2023-10 Nat. Rep. Batch 23

- **primary_respondent**: indicates if the respondent was the first person within the household (i.e. to become a member or whether s/he was added as a subsequent member. A household in this regard is broadly defined as anyone living together with the primary respondent. That is, a household comprises individuals who live together, e.g. as part of a family relationship (like a spouse/child/parent) or in context of some other relationship (like a roommate or tenant).
- **hardware**: indicates whether the respondent ever received hardware or not. Note: this variable should not be used to determine whether a respondent received hardware at a given point in time and/or whether s/he used the hardware to participate in a survey. Rather, it indicates whether hardware was ever provided:

1. None
 2. Tablet (includes Internet)
- **language**: the language in which the survey was conducted. This variable takes a value of 1 for English and a value of 2 for Spanish.
 - **start_date (start_year, start_month, start_day, start_hour, start_min, start_sec)**: indicates the time at which the respondent started the survey.
 - **end_date (end_year, end_month, end_day, end_hour, end_min, end_sec)**: indicates the time at which the respondent completed the survey.
 - **cs_001**: indicates how interesting the respondent found the survey.

4 BACKGROUND DEMOGRAPHICS

Every UAS survey data set includes demographic variables, which provide background information about the respondent and his/her household. Demographic information such as age, ethnicity, education, marital status, work status, state of residence, family structure is elicited every quarter through the “My Household” survey. The demographic variables provided with each survey are taken from the most recent ‘MyHousehold’ survey answered by the respondent. If at the time of a survey, the information in “My Household” is more than three months old, a respondent is required to check and update his or her information before being able to take the survey.

The following variables are available in each survey data set:

- **gender**: the gender of the respondent.
- **dateofbirth_year**: the year of birth of the respondent.
- **age**: the age of the respondent at the start of the survey.
- **agerange**: if the respondent’s age cannot be calculate due to missing information, ‘agerange’ indicates the approximate age. Should a value for both the ‘age’ and ‘agerange’ be present, then ‘age’ takes precedence over ‘agerange’.
- **citizenus**: indicates whether the respondent is a U.S. citizen.
- **bornus**: indicates whether the respondent was born in the U.S.
- **stateborn**: indicates the state in which the respondent was born. This is set to missing (.) if the respondent was not born in the U.S.
- **countryborn**: indicates the country in which the respondent was born. This is set to missing (.) if the respondent was born in the U.S.
- **countryborn_other**: indicates the country of birth if that country is not on the drop down list of countries shown to the respondent’.
- **statereside**: the state in which the respondent is living.
- **immigration_status**: indicates whether the respondent is an immigrant. It takes one of the following values: 0 Non-immigrant, 1 First generation immigrant (immigrant who migrated to the U.S), 2 Second generation immigrant (U.S.-born children of at least one foreign-born parent), 3 Third generation immigrant (U.S.-born children of at least one U.S.-born parent, where at least one grandparent is foreign-born), or 4 Unknown immigrant status.
- **maritalstatus**: the marital status of the respondent.
- **livewithpartner**: indicates whether the respondent lives with a partner.

- **education**: the highest level of education attained by the respondent.
- **hisplativo**: indicates whether the respondent identifies him or herself as being Hispanic or Latino. This variable is asked separately from race.
- **hisplatinogroup**: indicates which Hispanic or Latino group a respondent identifies him or herself with. This is set to missing (.) if the respondent does not identify him or herself as being Hispanic or Latino.
- **white**: indicates whether the respondent identifies him or herself as white (Caucasian).
- **black**: indicates whether the respondent identifies him or herself as black (African-American).
- **nativeamer**: indicates whether the respondent identifies him or herself as Native American (American Indian or Alaska Native).
- **asian**: indicates whether the respondent identifies him or herself as Asian (Asian-American).
- **pacific**: indicates whether the respondent identifies him or herself as Native Hawaiian or Other Pacific Islander.
- **race**: indicates the race of the respondent as singular (e.g., '1 White' or '2 Black') or as mixed (in case the respondent identifies with two or more races). The value '6 Mixed' that the respondent answered 'Yes' to at least two of the single race categories. This variable is generated based on the values of the different race variables (white, black, nativeamer, asian, pacific). This composite measure is not conditional on hisplativo, so an individual may identify as Hispanic or Latino, and also as a member of one or more racial groups.
- **working**: indicates whether the respondent is working for pay.
- **sick_leave**: indicates whether the respondent is not working because sick or on leave.
- **unemp_layoff**: indicates whether the respondent is unemployed or on lay off.
- **unemp_look**: indicates whether the respondent is unemployed and looking for a job.
- **retired**: indicates whether the respondent is retired.
- **disabled**: indicates whether the respondent has a disability.
- **If_other**: specifies other labor force status.
- **laborstatus**: indicates the labor force status of the respondent as singular (e.g., '1 Working for pay' or '2 On sick or other leave') or as mixed (in case the respondent selects two or more labor statuses). The value '8 Mixed' indicates that the respondent answered 'Yes' to at least two of the single labor force status variables. This variable is generated based on the values of the different labor status variables (working, sick_leave, unempl_layoff, unempl_look, retired, disabled, If_other).

- **employmenttype**: indicates the employment type of the respondent (employed by the government, by a private company, a nonprofit organization, or self-employed). This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- **workfullpart**: indicates whether the respondent works full or part-time. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- **hourswork**: indicates the number of hours the respondent works per week. This is set to missing (.) if the respondent is not currently working or currently on sick or other leave.
- **hhincome**: is the total combined income of all members of the respondent's household (living in their household) during the past 12 months.
- **anyhhmember**: indicates whether there were any members in the respondent's household at the time he/she answered the survey as reported by the respondent.
- **hhmembervnumber**: indicates the number of household members in the respondent's household at the time of the survey as reported by the respondent. It may be that 'anyhhmember' is 'Yes', but 'hhmembervnumber' is missing if the respondent did not provide the number of household members at the time of the survey.
- **hhmemberin_#**: indicates whether a household member is currently in the household as reported by the respondent. Household members are never removed from the stored household roster and their information is always included in survey data sets. The order of the roster is the same order in which household members were specified by the respondent in the 'MyHousehold' survey. The order is identified by the suffix _# (e.g., _1 indicates the first household member, _2 the second household member, etc.).

As an example, if the first household member is in the household at the time of the survey, 'hhmemberin_1' is set to '1 HH Member 1 is in the HH'; if he/she has moved out, 'hhmemberin_1' is set to '0 HH member 1 is no longer in the HH'. Since information of other household members (stored in the variables listed below) is always included in survey data sets, information about 'hhmemberin_1' is available whether this person is still in the household or has moved out.

- **hhmembergen_#**: indicates the gender of another household member as reported by the respondent.
- **hhmemberage_#**: indicates the age of another household member. The age is derived from the month and year of birth of the household member as reported by the respondent.
- **hhmemberrel_#**: indicates the relationship of the respondent to the other household member as reported by the respondent.

- **hhmemberuasid_#**: is the 'uasid' of the other household member if this person is also a UAS panel member. It is set to missing (.) if this person is not a UAS panel member at the time of the survey. Since this identifier is directly reported by the respondent (chosen from a preloaded list), it may differ from the actual (correct) 'uasid' of the UAS member it refers to because of reporting error. Also, this variable should not be used to identify UAS members in a given household at the time of the survey. This is because the variables 'hhmemberuasid_#' are taken from the most recent 'My Household' and changes in household composition involving UAS members may have occurred between the time of the respondent answered 'My Household' and the time the respondent answers the survey. To follow UAS members of a given household, it is advised to use the identifiers 'uashhid' and 'survhhid'.
- **lastmyhh_date**: the date on which the demographics variables were collected through the 'My Household' survey.

5 MISSING DATA CONVENTIONS

Data files provide so-called clean data, that is, answers given to questions that are not applicable anymore at survey completion (for example because a respondent went back in the survey and skipped over a previously answered question) are treated as if the questions were never asked. In the data files all questions that were asked, but not answered by the respondent are marked with (.e). All questions never seen by the respondent (or any dirty data) are marked with (.a). The latter may mean that a respondent did not view the question because s/he skipped over it; or alternatively that s/he never reached that question due to a break off. If a respondent did not complete a survey, the variables representing survey end date and time are marked with (.c). Household member variables are marked with (.m) if the respondent has less household members (e.g. if the number of household members is 2, any variables for household member 3 and up are marked with (.m)).

UAS provides data in STATA and CSV format. Stata data sets come with include variable labels that are not available in the CSV files. Value labels are provided for single-response answer option. In STATA these labels will include the labels 'Not asked' and 'Not answered' for (.a) and (.e), and will show in tabulations such as 'tab q1, missing'. For multiple-response questions a binary variable is created for each answer option indicating whether the option was selected or not. A summary variable is also provided in string format reflecting which options were selected and in which order. For example, if a question asked about favorite animals with options cat, dog, and horse, then if a respondent selected horse and then cat, the binary variables for horse and cat will be set to yes, while the overall variable would have a string value of '3-1'. If no answer was given, all binary variables and the summary variable will be marked with '.e'.

Questions that are asked multiple times are often implemented as so-called array questions. Supposing the name of such question was Q1 and it was asked in 6 different instances, your data set would contain the variables Q1_1_ to Q1_6_. To illustrate, if a survey asked the names of all children, then child_1_ would contain the name of the first child the respondent named and so on.

More information about the UAS data in general can be found on the UAS Data Pages web site.

6 ROUTING SYNTAX

The survey with routing presented in the next section includes all of the questions that make up this survey, the question answers when choices were provided, and the question routing. The routing includes descriptions of when questions are grouped, conditional logic that determines when questions are presented to the respondent, randomization of questions and answers, and fills of answers from one question to another.

If you are unfamiliar with conditional logic statements, they are typically formatted so that **if** the respondent fulfills some condition (e.g. they have a cellphone or a checking account), **then** they are presented with some other question or the value of some variable is changed. If the respondent does not fulfill the condition (e.g. they are not a cellphone adopter or they do not have a checking account), something **else** happens such as skipping the next question or changing the variable to some other value. Some of the logic involved in the randomization of questions or answers being presented to the respondent is quite complex, and in these instances there is documentation to clarify the process being represented by the routing.

Because logic syntax standards vary, here is a brief introduction to our syntax standards. The syntax used in the conditional statements is as follows: '=' is equal to, '<' is less than, '>' is greater than, and '!= ' is used for does not equal. When a variable is set to some number N, the statement looks like 'variable := N'.

The formatting of the questions and routing are designed to make it easier to interpret what is occurring at any given point in the survey. Question ID is the bold text at the top of a question block, followed by the question text and the answer selections. When a question or variable has associated data, the name links to the appropriate data page, so you can easily get directly to the data. Text color is used to indicate the routing: **red** is conditional logic, **gold** is question grouping, **green** is looping, and **orange** is used to document randomization and other complex conditional logic processes. The routing is written for a computer to parse rather than a human to read, so when the routing diverges significantly from what is displayed to the respondent, a screenshot of what the respondent saw is included.

The name of the randomization variables are defined in proximity to where they are put into play, and like the question ID the names of the randomization variables can be used to link directly to the associated data page.

7 SURVEY WITH ROUTING

Start of section **Consentsection**

stratum := getStratum()

screen1 (screen 1 in section Consentsection)

We are starting a new study that will compare one of our UAS surveys, a memory game, that you fill out on the web with a similar survey taken over the telephone. Being in this research is entirely voluntary. It is up to you whether to participate. Please take as much time as you need to read about the study and understand it. If you have any questions, please contact the UAS helpdesk to get them answered. You are being invited to take part in this study because you have participated in the UAS previously and you are age 50 or older. You are eligible if you are able to take the survey in English and have not been diagnosed by a physician with a progressive cognitive impairment that would interfere with your ability to consent to this study. About 900 other members of the UAS will take part in the study. This research is being funded by the National Institute on Aging.

screen2 (screen 2 in section Consentsection)

If you decide to do this study, you will do the same survey twice. Once online, and once over the telephone.

The survey consists of a short memory game and questions about your mood that you may have seen before on previous UAS surveys. Each survey will last about 15 minutes. We think you will enjoy completing it.

Participants in this project either fill out the survey in the UAS first, and then will take a telephone survey about a month later, or they will do the telephone survey first and the UAS web survey later.

The purpose of the study is to learn about differences between how people respond to memory games when they are done over the phone or on the web. This will help researchers learn how to distinguish between people with memory difficulties and those without difficulties.

screen4 (screen 3 in section Consentsection)

For the telephone survey part of this study, we have contracted with a company called Davis Research. If you agree to participate we will give them only your phone number, and first name, with no other identifying information. They will use your phone number only to contact you to do the survey, and for no other purpose. They will not share your information or use it in any other way.

If you agree to participate, we will randomly assign you to either doing the web survey

first or the telephone survey first. If you do the web survey first, Davis Research will call you to do the telephone survey, and you will be able to schedule a day and time if you prefer.

If you do the telephone survey first, then in about a month, you will be sent an email inviting you to do the web survey. **You will earn \$20 for doing both surveys. Each one takes about 15 minutes to complete.**

screen3 (screen 3 in section Consentsection)

Here is a summary of facts about the Telephone / Online Survey Project:

Question: What is this study about and what will I be asked to do?

Answer: The study will compare very similar surveys when the survey is done on the web or when the survey is done by telephone. If you decide to participate, we will assign you to take a survey online first, or by telephone first. About one month later, we will contact you to do the other type of survey.

Question: How long will each survey take, and how much will I earn?

Answer: Each survey takes about 15 minutes. You will earn \$10 for each survey.

Question: If I agree to participate, what happens next?

Answer: If you are picked to do the survey online first, we will send you an email invitation to do the survey, as we usually do. If you are picked to do the telephone survey first, we will email you a reminder to watch for a call from Davis Research. Davis Research is company we trust to make the telephone calls and do the telephone interviews. Davis will use your email or telephone number only to contact you and for no other purpose. An interviewer will read the questions over the telephone and you will give your answers.

Question: Can I schedule a time for the telephone call?

Answer: Yes! You will have the opportunity to schedule the telephone survey at a time of your convenience.

Question: What are the risks and benefits of participating in this survey?

Answer: Similar to taking any other UAS survey, there are no anticipated risks. Some people may feel uneasy when asked about their memory, thinking, or mood. As with all UAS surveys, you can choose to skip questions, or stop answering the survey at any time.

Question: Are my answers private?

Answer: As with all UAS surveys, we protect your privacy by keeping your survey responses confidential. There is a small risk that people not connected with the study will learn your identity or personal information, but we will protect your data just as we protect all UAS data. As described to you when you joined the UAS, we have obtained a Certificate of Confidentiality from the National Institutes of Health that allows us to legally refuse to identify you unless you say it is ok. Like all UAS data, your answers will be available to researchers who are approved to use the UAS; however, your answers are not connected to any information that would identify who you are.

Question: Are there any benefits involved?

Answer: There are no direct benefits to survey participants, but the research and results being studied will help us to learn more about how well web-based questions about memory actually work. Although we ask about your memory, we are not performing any sort of diagnosis. However, if you do have concerns about your memory, we would encourage you to talk to your physician and, if you are interested, we will provide you with resources so that you could learn more about memory and aging,

Question: What happens if I decide not to participate?

Answer: If you decide NOT to participate in this project, we won't contact you further about this project, and nothing will change. Your decision is completely voluntary. Even if you say yes now, you can change your mind and stop doing the surveys at any time. Whether or not you participate in this project, we appreciate your continuing to complete our regular surveys. If you choose the alternative not to participate now, it does not affect your ability to participate in future UAS surveys.

Question: What if I have more questions before I decide?

Answer: If you have any questions, call the UAS helpdesk at (855) 872-8673 or send us an email at uashelp@usc.edu.

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

check_intro (Section Consentsection)

Here are three questions, to be sure that the information we have provided to you about the project is clear:

check1 (comprehension question 1 in section Consentsection)

Do you have to take part in this study, or is it OK to say 'no'?

- 1 It is OK to say "no"
- 2 I am required to take part in this study

check2 (comprehension question 2 in section Consentsection)

What will you be asked to do in this project?

- 1 Complete a telephone poll about current events
- 2 Complete the same survey by telephone and on the web

check3 (comprehension question 3 in section Consentsection)

If I decide to say "no" to this study, will I be contacted by UAS again for other surveys?

- 1 Yes, I will be contacted again. My participation in UAS is not affected by my decision to participate or not in this study
- 2 No, I will not be contacted again, and I will be dropped from the UAS if I do not take part in this study

END OF GROUP

IF check1 != 1 OR check2 != 2 OR check3 != 1 THEN

checked := 2

earlyexit (Section Consentsection)

Thank you for your participation in the Understanding America Study panel. We appreciate your participation in our online surveys. All UAS surveys are voluntary, and we and we will contact you when we have another survey available.

ELSE

checked := 1

END OF IF

consent (consent in section Consentsection)

Would you like to participate in this project, which includes doing the same survey by telephone and online?

1 Yes

2 No

3 I have questions

IF consent = 1 THEN

assignment_order := getModeOrder()

davis := getDavis()

assignment_order_flag := 1

IF assignment_order = EMPTY THEN

assignment_order := mt_rand(1,2)

assignment_order_flag := 2

END OF IF

IF assignment_order = 1 THEN

GROUP OF QUESTIONS PRESENTED ON THE SAME SCREEN

consentyes_telephone1 (Section Consentsection)

Thank you for agreeing to participate in our project! We greatly appreciate it.

As a reminder, you will be taking the same survey twice. Once online, as with all UAS surveys, and once via telephone.

You have been assigned to do the telephone survey first.

A trained interviewer with our survey partners at Davis Research will call you to do the survey over the phone, sometime in the coming week or two.

phone1 (Section Consentsection)

What is the best number to reach you by telephone to do the survey?

STRING

phone2 (Section Consentsection)

Is there another number we should try?

STRING

END OF GROUP

consentyes_telephone (Section Consentsection)

If you prefer, you may schedule a specific date and time for the telephone interview. When you return to your UAS page after this survey, click on the link that says "Schedule a telephone survey call day/time". If you do not schedule a time, or if you miss a scheduled call, that is okay, too. A Davis Research interviewer will try several times to reach you.

Watch for a call from "UAS Panel USC". If you have call blocking on your phone, you can whitelist (or add to your contacts) this Davis Research number so they can get through: 213-354-4829.

ELSE

consentyes_online (Section Consentsection)

Thank you for agreeing to participate in our project! We greatly appreciate it.

As a reminder, you will be taking the same survey twice. Once online, as with all UAS surveys, and once via telephone.

You have been assigned to do the survey online first.

Please finish filling out this survey, then check your UAS account webpage for the button labeled "UAS 227". Click on it to complete the first of the two surveys. In about a month we will contact you about doing the telephone survey.

END OF IF

ELSEIF consent = 2 THEN

consentno (Section Consentsection)

Thank you for considering our project. We respect your decision not to participate, and hope you will continue to do our surveys - - your answers are always very important to us! If you have any further questions, please call the UAS helpdesk at (855) 872-8673 or send us an email at uashelp@usc.edu.

ELSE

sendpdf (consent follow up in section Consentsection)

Thank you for considering participating in our project! We will contact you with more information about the project. You can also call the UAS helpdesk at (855) 872-8673 or send us an email at uashelp@usc.edu and we will be happy to answer any specific questions that you may have.

```
| dummy := sendEmailPDF(prim_key)
```

```
