

USC Dornsife/Los Angeles Times National Poll

TOPLINE RESULTS (UAS 197) – July 2019 Monthly Survey –July Pre-Debate Release
Release Date: July 29 2019. Field dates July 12 – July 25, 2019

SURVEY METHODS

This USC Dornsife / Los Angeles Times Poll is the result of a collaboration between researchers in the *Center for the Political Future* and the *Center for Economic and Social Research* in the Dana and David Dornsife College of Letters, Arts and Sciences at the University of Southern California, in partnership with the Los Angeles Times.

The sample of 1,827 Democratic presidential primary voters participated in a national poll of eligible voters, from July 12 through July 25, 2019. Participants are members of the Center for Economic and Social Research's Understanding America Study (UAS) probability-based internet panel who are 18 or older and U.S. citizens. The sample includes 1,520 who provided a choice of Democratic primary candidate in UAS survey 175 last April. The poll was conducted in respondents' choice of English or Spanish. The margin of sampling error[†] is +/- 3 percentage points for all Democratic primary voters, and for those who participated in both polls. Margins of sampling error for other reported subgroups may be higher, and are provided in the associated banner crosstab release. A future release will include additional sample and additional questions.

Survey information: Full question text and context language for questions in this release are included. We rotated the order of candidate names to reduce order effects. Respondents participated via computer, mobile device or tablet, at any time of day or night during the field period. The data associated with this release will be available to registered UAS users at <https://uasdata.usc.edu/survey/UAS+197> after the final release of data.

Survey Weights and Participation Rate: As 6,514 panel members were eligible to participate in this survey, the participation rate was 65% to date. We calculated weights in two stages: (1) base weights account for the probabilities of selection in our sampling procedures, and (2) post-stratification weights align survey distributions to CPS benchmarks. Weighting benchmarks were applied to the full sample of eligible voters and derived from the Current Population Survey Annual Social and Economic Supplement.

† Survey Error: Factors other than sampling error may affect results of any survey, including question wording, question order, sample type (e.g. opt-in panels vs. probability panels such as UAS), population coverage, and impact of current events. In addition, results of questions asked without an interviewer (e.g. in an internet panel) may differ somewhat from similar questions asked by an interviewer over the phone. Sampling error calculations are at the 98% confidence level.

Panel Information: The UAS is an ongoing national research panel that started in 2014. We recruit panel members in waves from Marketing Systems Group frames of all household addresses in the United States. To ensure full coverage of the U.S. population, we provide internet-connected tablets to individuals who were not already online. Our panel thus includes U.S. residents who have cell phones, landlines, or no phone at all. Panel members are compensated for their participation.

Questions reported here comprise one section of a longer survey, and are findings from an early data set. Full survey codebook and data will be available at <https://uasdata.usc.edu/survey/UAS+197> at the end of August. Brackets indicate randomized text and matching answer values. “-” indicates that the estimate is less than one percent. Unless otherwise indicated, tables are weighted column percentages.

The next set of questions are about the upcoming primaries and caucuses in advance of the 2020 presidential election
