1. INTRODUCTION

This document describes the UAS Comprehensive File of the Understanding America Study (UAS), which was created at the University of Southern California’s Center for Economic and Social Research (CESR). Support for this data set is provided by the Social Security Administration (SSA) and the National Institute on Aging.

The UAS Comprehensive File (known simply as the Comprehensive File) comprises online survey data collected by CESR through its UAS internet panel: <https://uasdata.usc.edu/index.php>. The UAS is a nationally representative panel of American households randomly recruited from United States Postal Service delivery sequence files. UAS respondents are people age 18 and older who answer surveys, on average, once or twice monthly via an online interface that is technologically powerful yet friendly for the participants and quick to deliver results. The Comprehensive File includes most sections of the core Health and Retirement Study (HRS)¹ questionnaire, administered to respondents in the UAS every two years in a total of six consecutive surveys for each data collection wave. The Comprehensive File also contains data on 14 topics from other core UAS surveys, most of which are repeated every two years. The Comprehensive File is updated regularly as new waves of data become available.

The HRS data in the current Comprehensive File are from the first five fieldings of the HRS instrument in the UAS, based on the 2014 (Wave 12), 2016 (Wave 13), 2018 (Wave 14), 2020 (Wave 15) and 2022 (Wave 16) core HRS questionnaires. The harmonized variables are similar in both structure and naming conventions to what is found in the [RAND HRS file data description](#) produced by the RAND Corporation. This was done to promote familiarity with Comprehensive File data if users have worked with the RAND HRS data previously.

The Comprehensive File includes a wide array of measures from the HRS questionnaire: demographics, wealth assets, income, employment history, pensions, retirement, government benefits, family structure, and health-related matters, plus other relevant financial cognition and decision-making variables elicited in other core UAS surveys. These variables from other core UAS surveys are referred to in this document as “non-HRS data” and are organized into topic areas. The non-HRS variables retain their names from the UAS surveys in which they originated, but are preceded by a prefix denoting the topic area and wave as described in more detail later in this document.

In the current release of the Comprehensive File, non-HRS data from Waves 12 through 16 are included from surveys previously fielded or currently in the field. Future releases of the Comprehensive File will include harmonized data from additional waves of the HRS surveys and new data from non-HRS UAS surveys currently in the field.

¹ The core HRS refers to the questionnaires and survey that correspond to the HRS administered by the University of Michigan.

Accompanying the Comprehensive File is the UAS Component File, which contains the component variables that are used to calculate several income and wealth summary variables in Waves 12 through 16 of the UAS HRS. For example, the Component File contains the individual amounts (e.g., income from wages, second job, tips, and/or professional practice) that together comprise the value of the Comprehensive File's summary item "total earnings." Both data files, and the Component File Data Description can be found [here](#). Beginning in June 2020, many of the My Household² survey demographic variables collected from each UAS survey (both UAS HRS and core non-HRS surveys), as well as UAS survey start and completion dates are included in the Component File for all observations in the Comprehensive File.

The Comprehensive File can be linked with any UAS survey not already included. How to perform that linkage is described later in this document. An updated listing of all available UAS data sets is available on the [UAS All Surveys page](#).

Please send all questions about the data set or this data description to uas-l@mymaillists.usc.edu.

² The My Household survey is administered quarterly to all UAS respondents. It collects background information about the respondent and household, and asks about key demographic measures.

2. OVERVIEW OF THE UAS COMPREHENSIVE FILE

What's New

- Financial health scores have been derived by the Financial Health Network for two additional annual waves of surveys: 2023 and 2024. More details on these scores can be found in [Section 3.2.16](#).

2.1 UAS Input Files

The UAS Comprehensive File consists of survey responses from many different studies and UAS surveys. These include the UAS HRS, which is divided into six UAS surveys for each wave to limit respondent burden in each separate survey. The section letters in Table 1 (e.g., UAS 20 Sections A-D) refer to the HRS questionnaire's core sections.

The Comprehensive File also includes studies in 14 topic areas, listed in Table 1 and described in more detail in [Section 3.2](#). Each of the 14 topics is denoted with a single letter, and together comprise what is termed core "non-HRS" data.

The My Household survey is administered quarterly to all respondents. To provide background information about the respondent and household, the survey asks about key demographics, including age, ethnicity, education, marital status, work status, state of residence, and family structure. For detailed information about how the Comprehensive File uses My Household demographic data, please see [Section 3.1.2](#) and [Section 3.2](#).

Table 1 summarizes the core UAS studies that are included in the Comprehensive File.

Table 1. Core UAS Surveys in the Comprehensive File

UAS Study	UAS Surveys
UAS HRS	UAS 20 Sections A-D (Wave 12) UAS 21 Sections E-H (Wave 12) UAS 22 Sections J-M (Wave 12) UAS 23 Sections N-P (Wave 12) UAS 24 Sections Q-R (Wave 12) UAS 25 Sections S-W (Wave 12) UAS 95 Sections A-D (Wave 13) UAS 96 Sections E-H (Wave 13) UAS 97 Sections J-M (Wave 13) UAS 98 Sections N-P (Wave 13) UAS 99 Sections Q-R (Wave 13) UAS 100 Sections S-W (Wave 13) UAS 185 Sections A-D (Wave 14) UAS 186 Sections E-H (Wave 14) UAS 187 Sections J-M (Wave 14) UAS 188 Sections N-P (Wave 14) UAS 189 Sections Q-R (Wave 14) UAS 190 Sections S-W (Wave 14) UAS 396 Sections A-D (Wave 15) UAS 397 Sections E-H (Wave 15) UAS 398 Sections J-M (Wave 15) UAS 399 Sections N-P (Wave 15) UAS 400 Sections Q-R (Wave 15) UAS 401 Sections S-W (Wave 15) UAS 530 Sections A-D (Wave 16) UAS 531 Sections E-H (Wave 16) UAS 532 Sections J-M (Wave 16) UAS 533 Sections N-P (Wave 16) UAS 534 Sections Q-R (Wave 16) UAS 535 Sections S-W (Wave 16)
Topic P: Financial Literacy; Personality; Understanding Probabilities; Numeracy	UAS 1 (Wave 12) UAS 121 (Wave 13) UAS 237 (Wave 14) UAS 458 (Wave 15) UAS 593 & UAS 594 (Wave 16)
Topic W: Satisfaction with life domains; well-being yesterday; neighborhood quality; comparison of incomes with others	UAS 2 (Wave 12) UAS 121 (Wave 13) UAS 237 (Wave 14) UAS 458 (Wave 15) UAS 594 (Wave 16)
Topic K: What do people know about Social Security	UAS 16 (Wave 12)

	UAS 94 (Wave 13) UAS 231 (Wave 14) UAS 457 (Wave 15) UAS 629 (Wave 16)
Topic F: Financial Services and Decision Making	UAS 18 (Wave 12) UAS 119 (Wave 13) UAS 239 (Wave 14) UAS 460 (Wave 15) UAS 631 (Wave 16)
Topic I: Ways people get information on retirement and Social Security	UAS 26 & UAS 16 (Wave 12) UAS 113 (Wave 13) UAS 238 (Wave 14) UAS 459 (Wave 15) UAS 630 (Wave 16)
Topic C: Subjective numeracy and Consumer Financial Well-being	UAS 38 (Wave 12) UAS 177 (Wave 13) UAS 413 (Wave 14) UAS 578 (Wave 15)
Topic N: Cognitive measures 1 – Numbers	UAS 42 (Wave 12) UAS 83 (Wave 13) UAS 292 (Wave 14) UAS 483 (Wave 15) UAS 642 (Wave 16)
Topic V: Cognitive measures 2 – Picture Vocabulary	UAS 43 (Wave 12) UAS 84 (Wave 13) UAS 293 (Wave 14) UAS 484 (Wave 15) UAS 643 (Wave 16)
Topic A: Cognitive measures 3 – Verbal Analogies	UAS 44 (Wave 12) UAS 85 (Wave 13) UAS 294 (Wave 14) UAS 485 (Wave 15) UAS 644 (Wave 16)
Topic D: Views and Knowledge about the Social Security Disability Program	UAS 322 (Wave 14) UAS 551 (Wave 15)
Topic L: Labor Force and Occupation	UAS 602 (Wave 16)
Topic T: Economic Preferences and Decision-making	UAS 603 (Wave 16)
Topic M: Quality of Life Including Mental and Social Health	UAS 604 (Wave 16)
Topic E: Physical and Social Environment	UAS 605 (Wave 16)
My Household	Taken quarterly

Respondents are invited to the core surveys in the UAS Comprehensive File in the following manner:

- 1) Non-HRS Topics P, W, K, F, I, C, D, L, T, M, E:
 - a. Respondents who complete a survey wave (before it closes): Prior to October 1, 2022 invites to each new wave were sent approximately two years after the previous wave was *completed*. From October 1, 2022 to the present, invites to each new wave are sent approximately two years after the date on which respondents were *invited* to the previous wave—contingent on them having completed the previous wave. To ensure that late respondents are not invited to the next wave soon after completion, a minimum time of one year between any two waves is enforced.
 - b. Respondents who do not complete a survey wave (by the time the survey closes): Respondents are invited to the next wave if they are active UAS respondents, where "active" in this context is defined as the respondent having completed at least one survey in the last year.
- 2) Non-HRS Topics N, V, A:
 - a. Respondents who complete a survey wave (before it closes): Prior to October 1, 2022 invites to each new wave were sent approximately two years after the previous wave was *completed*. From October 1, 2022 to the present, invites to each new wave are sent approximately two years after the date on which respondents were *invited* to the previous wave—contingent on them having completed the previous wave. To ensure that late respondents are not invited to the next wave soon after completion, a minimum time of one year between any two waves is enforced.
 - b. Respondents who do not complete a wave: The surveys in Topics N, V, and A never close. As such, respondents are not invited to a new wave until they have completed the preceding wave.
- 3) My Household: Respondents are invited to fill out the My Household survey every quarter. That is, once respondents have completed their My Household survey, they are invited to the survey again 3 months after completion.
- 4) UAS HRS:
 - a. Respondents who complete a survey wave (before it closes): Prior to January 20, 2023 invites to each new wave were sent approximately two years after the previous wave was *completed*. Here completion is defined as having completed all six surveys in a UAS HRS wave (together covering HRS sections A to W). From January 20, 2023 to the present, invites to each new wave are sent approximately two years after the date on which respondents were *invited* to the previous wave—contingent on them having completed the previous wave.

From July 28, 2023 to the present, to ensure that late respondents are not invited to the next wave soon after completion, a minimum time of one year between the start of any two waves is enforced. As such, there is at least one year between completion of the first survey in an UAS HRS wave and the invitation to the first survey in the next UAS HRS wave.

Response data from the previously completed wave is preloaded into the new wave and used where relevant.

- b. Respondents who do not complete a wave (by the time the survey closes): Respondents are invited to the first survey of the next UAS HRS wave if they are active UAS respondents, where "active" in this context is defined as the respondent having completed at least one survey in the last year.

Response data from the previous incomplete wave is not preloaded into the new wave. Instead, the new wave is treated as a first-time interview if respondents have never completed an UAS HRS wave; or as a follow-up interview if respondents completed an UAS HRS wave prior to the incompleting wave.

2.2 Survey Participation Indicators

Not every panel member participated in all 16 studies (i.e., My Household, UAS HRS, and the 14 non-HRS topics). Study participation is represented in the Comprehensive File with a set of participation indicator variables. A variable called *in_all* is included to indicate whether a respondent participated in at least one wave of all 16 studies. In addition, several variables indicate whether a respondent participated in each of the available waves for each study. These are *inhrs12*, *inhrs13*, *inhrs14*, *inhrs15* and *inhrs16* for the five waves of HRS data, and indicator variables representing participation in the available waves for the 14 non-HRS topics. These non-HRS indicator variables have the naming structure:

$$in_tWV$$

where *t* indexes the particular topic (e.g., *f* for Topic F: Financial Services and Decision Making), and *WV* is the wave number, 12-16). The variable *inhrs12* indicates a respondent has completed at least the first (UAS 20) of the Wave 12 UAS HRS surveys. The other *inhrs* variables indicate whether a respondent has completed the first UAS HRS survey in the UAS HRS wave sequence, respectively.

In addition, variables indicating participation in at least 1 UAS survey in a wave are included in the Comprehensive File. These variables are named *inwaveWV*, where *WV* denotes the UAS wave number. Participation in a wave is determined by whether the respondent completed at least 1 UAS HRS survey in a wave, and/or at least 1 non-HRS UAS survey in a wave.

UAS HRS survey-specific indicator variables also are present in the Comprehensive File. Each indicates whether a respondent has completed an individual UAS survey. For the UAS HRS, there are 30 such variables corresponding to the six Wave 12 UAS HRS surveys (UAS 20 through UAS 25), the six Wave 13 UAS HRS surveys (UAS 95 through UAS 100), the six Wave 14 UAS HRS surveys (UAS 185 through UAS 190), the six Wave 15 UAS HRS surveys (UAS 396 through UAS 401) and the six Wave 16 UAS HRS surveys (UAS 530 through 535). They have the naming structure:

inuasXX

where *XX* indicates the UAS survey number. Similar indicator variables exist in the file for each core non-HRS survey and the My Household survey. In the current version of the Comprehensive File, they are:

*inuas1 inuas2 inuas16
inuas18 inuas26 inuas38
inuas42 inuas43 inuas44
inuas83 inuas84 inuas85
inuas94 inuas113 inuas119
inuas121 inuas177 inuas231
inuas237 inuas238 inuas239
inuas292 inuas293 inuas294
inuas322 inuas413 inuas457
inuas458 inuas459 inuas460
inuas483 inuas484 inuas485
inuas551 inuas578 inuas593
inuas594 inuas602 inuas603
inuas604 inuas605 inuas629
inuas630 inuas631 inuas642
inuas643 inuas644
inmyhh*

Since some surveys are still in the field, some response numbers have likely changed since the Comprehensive File's creation. All future releases of the Comprehensive File will include updated versions of all active UAS surveys.

2.3 UAS Comprehensive File Structure and Data Download Dates

The Comprehensive File is available for download in STATA or CSV format from the [UAS website](#). The file is organized at the respondent-level. If you would like the data in a different format, such as SAS, please email your request to uas-l@maillists.usc.edu.

The fielding period for the first two waves (Wave 12 and Wave 13) of the UAS HRS surveys concluded in Fall 2020. As a result, the December 2020 Comprehensive File was the last version

to include data updates from the first two UAS HRS waves (UAS surveys: UAS 20-25, UAS 95-100). The fielding period for the third wave of the UAS HRS surveys concluded in Summer 2022. Subsequently, the September 2022 Comprehensive File was the last version to include data updates from UAS HRS surveys UAS 185-190. The fielding period for UAS HRS Wave 4 concluded in early 2025, and therefore the March 2025 Comprehensive File is the last version to include Wave 4 new data.

The fielding period has also concluded for all non-HRS topics fielded for Wave 12 and Wave 13, except the three cognitive measure topics (N, V, A) which do not close. The fielding period for Wave 14 non-HRS surveys UAS 231, 238, and 239 concluded in Summer 2022, and the fielding period for Wave 14 non-HRS survey UAS 237 concluded in Fall 2022. The Wave 14 non-HRS survey UAS 322 concluded its fielding period in Summer 2023. The Wave 14 non-HRS survey UAS 413 concluded in Fall 2023.

Still in the field are the three cognitive measure topics (N, V, and A) for Wave 12 (UAS 42-44), Wave 13 (UAS 83-85), and Wave 14 (UAS292-294), Wave 15 and Wave 16 of the UAS HRS, and several other Wave 15 and Wave 16 non-HRS topics.

UAS surveys from waves that are no longer in the field will only be downloaded and used in the creation of future Comprehensive Files on an as-needed basis, such as to correct for data anomalies or other rare occurrences. Otherwise, the first download after a survey has concluded will be used.

Table 2 lists the most recent data download date for each UAS HRS and non-HRS UAS core survey included in the current release of the Comprehensive File.

Table 2. Download Date of UAS Files in the Current Comprehensive File
 (* denotes the survey or surveys that are out of the field)

UAS Survey	Date of Last Download
UAS HRS Wave 12 (UAS 20–UAS 25)*	November 22, 2020
UAS HRS Wave 13 (UAS 95–UAS 100)*	November 22, 2020
UAS HRS Wave 14 (UAS 185–UAS 190)*	August 24, 2022
UAS HRS Wave 15 (UAS 396–UAS 401)*	March 3, 2025
UAS HRS Wave 16 (UAS 530–UAS 535)	May 15, 2025
UAS non-HRS Wave 12 (UAS 1, 2, 16, 18, 26, 38)*	November 22, 2020
UAS non-HRS Wave 12 Cognitive Measures (UAS 42, 43, 44)	May 15, 2025
UAS non-HRS Wave 13 (94, 113, 119, 121)*	November 22, 2020
UAS non-HRS Wave 13 (UAS 177)*	November 29, 2021
UAS non-HRS Wave 13 Cognitive Measures (UAS 83, 84, 85)	May 15, 2025
UAS non-HRS Wave 14 (UAS 231, 238, 239)*	August 24, 2022
UAS non-HRS Wave 14 (UAS 237)*	November 21, 2022
UAS non-HRS Wave 14 (322*)	August 21, 2023
UAS non-HRS Wave 14 (413*)	November 15, 2023
UAS non-HRS Wave 14 Cognitive Measures (UAS 292, 293, 294)	May 15, 2025
UAS non-HRS Wave 15 (UAS 457, 458, 459, 460, 551, 578)	May 15, 2025
UAS non-HRS Wave 15 Cognitive Measures (UAS 483, 484, 485)	May 15, 2025
UAS non-HRS Wave 16 (UAS 593, 594, 602, 603, 604, 605, 629, 630, 631, 642, 643, 644)	May 15, 2025
UAS CogCF	June 3, 2025

2.4 Obtaining UAS Data

The data described in this document are based on UAS public data release files. These files are accessible through the [UAS All Surveys page](#).

Before using the data, you must first obtain permission from the UAS by [registering on the UAS site](#) to download the public release files. Registering with UAS is considered agreeing to the “conditions of use” governing access and usage of the data.

2.5 Merging with other UAS Data Sets

Each UAS file is merged with other files using the unique person identifier variable, *uasid*. This variable, assigned to a respondent at recruitment into the UAS panel, stays fixed for each survey taken. For more information about default identification variables included in each survey, such as household identifier, *uashhid*, please visit the [UAS standard variables page](#). Of those variables, only *uasid* and *uashhid* are included in the Comprehensive File. Please see the UAS Component File Data Description [found here](#) to learn which standard variables the Component File includes.

3. UAS COMPREHENSIVE FILE DESCRIPTION

The Comprehensive File contains My Household survey demographic variables, harmonized UAS HRS variables, raw data from 14 other core UAS studies, non-HRS derived variables, financial health scores, Elder Index™ quintiles, and sample weights.

My Household demographic variables are included in the file for Waves 12 through 16.

The construction of UAS HRS derived variables for Waves 12 through 16 has been completed and these variables are included in the Comprehensive File. Of these, only Wave 16 UAS HRS surveys are still in the field. The derived variables pertain to the HRS sections about income and wealth, health, retirement, pensions, Social Security, employment history, health insurance, demographics, and family structure. Future releases of the Comprehensive File will include additional derived variables from surveys of upcoming UAS HRS waves.

Wave 12 through Wave 15 data are included for 9 of the 14 non-HRS topics. Topic D was initially fielded in Wave 14 and therefore will not have data for Waves 12-13. Topic L, T, M and E were initially fielded in Wave 16 and therefore will not have data for Waves 12-15. Wave 16 data is currently available for 12 non-HRS topics.

3.1 UAS HRS Survey Data

This release of the Comprehensive File contains harmonized variables from all six surveys that make up waves 12 through 16 of the UAS HRS. The following is a description of the content of each UAS HRS survey, as well as examples of the harmonized variables derived from each survey.

UAS 20, UAS 95, UAS 185, UAS 396, UAS 530

- Content description: respondent background information, household information, marital history, health history, cognitive abilities
- Examples: veteran status, religion, number of times married/divorced/widowed, health as related to physical conditions such as diabetes and heart disease, cognitive abilities, self-rated memory

UAS 21, UAS 96, UAS 186, UAS 397, UAS 531

- Content description: family structure, physical limitations, housing-related assets, living arrangements
- Examples: value of primary residence, whether assistance needed to eat or manage money, family-related variables (such as the number of siblings and children the respondent has), number of people living in household, information about each parent (current age or age at death)

UAS 22, UAS 97, UAS 187, UAS 398, UAS 532

- Content description: job status, job history, pensions, retirement, Social Security
- Examples: whether respondent has any health-related work limitations, currently working for pay, longest employment tenure, number of pension plans respondents have at current job and pensions from which they currently receive income, retirement status, whether receiving any Social Security benefits

UAS 23, UAS 98, UAS 188, UAS 399, UAS 533

- Content description: health insurance, healthcare usage, probabilities of events
- Examples: number of doctor visits, medical expenditures, nursing home stays, whether respondent has health insurance coverage, probability of certain work and life events occurring (such as working and living until a certain age)

UAS 24, UAS 99, UAS 189, UAS 400, UAS 534

- Content description: Income and non-housing wealth assets
- Examples: income from wages, annuities, pensions, government programs for the respondent and spouse, value of non-housing wealth assets such as stocks, bonds, and IRAs

UAS 25, UAS 100, UAS 190, UAS 401, UAS 535

- Content description: Life insurance
- Example: whether the respondent has a life insurance policy

A complete list of all HRS-based variables included in the Comprehensive File can be found in the tables in [Appendix A](#).

3.1.1 Variable Naming Structure and Survey Indicator Variables

The naming structure for UAS HRS-derived variables in the Comprehensive File is consistent with the structure of the RAND HRS data file (Bugliari, D. et al., 2016).

The harmonized UAS HRS variables in the Comprehensive File begin with the letter “*r*” if the variable pertains to the respondent only, the letter “*s*” if the variable pertains to the respondent’s answer about his or her spouse, and the letter “*h*” if the variable pertains to the respondent’s household. The next two characters correspond to the wave number of the HRS version from which the UAS HRS questionnaire was derived.

For example, the second wave of harmonized UAS HRS variables has a “13” in the prefix, corresponding to core HRS Wave 13 (2016 HRS questionnaires); the variable *h13ahous* is the Wave 13 household-level variable pertaining to net value of primary residence.

In addition, there are the previously mentioned UAS HRS survey participation indicator variables (described in [Section 2.2](#)) that allow data users to know which, if any, of the UAS HRS surveys were taken by each respondent.

For each UAS HRS wave, there are two timestamp variables included in the Comprehensive File that pertain to the UAS HRS survey sequence in its entirety (up to 6 surveys per wave). These variables are *rWViwbeg*, which indicates the date when the respondent began the first survey in the UAS HRS sequence (for example: UAS 20 for Wave 12 and UAS 95 for Wave 13), and the variable *rWViwend*, which indicates the date of the most recently completed UAS HRS survey by each respondent (where *WV* indicates the UAS HRS wave number). If a respondent did not take any UAS HRS surveys in a wave, the *rWViwbeg* and *rWViwend* variables are assigned a special missing code to indicate such (.w).

Starting in June 2020, survey begin and end timestamp variables for each UAS HRS survey, as well as for each core non-HRS survey, are included in the Comprehensive File. The naming convention of these survey-specific timestamp variables is similar to the UAS HRS-derived variables in the Comprehensive file except for one major difference. Each contains in their prefix an underscore followed by the letters “uas” and a numeric identifier that corresponds to the UAS survey from which they originated. For example, Table 3 shows the timestamp variables for each Wave 12 UAS HRS survey numbered 20 through 25, respectively:

Table 3. Variable naming structure of UAS survey-specific timestamps*

UAS Survey Number	Timestamp variable for survey start	Timestamp variable for survey completion
20	r12_uas20iwbeg	r12_uas20iwend
21	r12_uas21iwbeg	r12_uas21iwend
22	r12_uas22iwbeg	r12_uas22iwend
23	r12_uas23iwbeg	r12_uas23iwend
24	r12_uas24iwbeg	r12_uas24iwend
25	r12_uas25iwbeg	r12_uas25iwend

* Table 3 shows timestamp variables only for Wave 12 UAS HRS surveys as an example

Begin and end timestamp variables for each core UAS survey in the Comprehensive File are also included in the Component File.

The full list of survey indicator and timestamp variables can be found in [Table A.3](#) of Appendix A.

3.1.2 UAS Demographic Variables

Many of the demographic variables in the Comprehensive File correspond to information from My Household survey responses. These variables are: respondent birth year, age at the beginning of the wave, age at the time of the last completed survey of the wave, race, Hispanic ethnicity, gender, marital status, and highest education level achieved. Beginning with the March

2018 Comprehensive File release, 11 more variables were added: whether the respondent was born in the United States, the country where the respondent was born if other than the US, whether the respondent is a first/second/third generation immigrant, whether a tablet was provided to the respondent for completing the surveys, whether the respondent is living with a partner, whether the respondent is a primary respondent or an added member, sample frame, US state where the respondent was born, US state where the respondent is residing, and the number of other household members who are also UAS panel members.

Beginning with the March 2020 file, a US citizenship variable was added for each wave, and in the June 2020 file, a labor force status variable was added for each wave.

The information for these variables is extracted from the My Household surveys as follows: For individuals answering at least one UAS HRS survey in a wave, the information used corresponds to non-missing responses provided during the most recent My Household survey in that wave.

For example, if a respondent completed UAS HRS surveys 20, 21, and 22, demographic information is used from the My Household survey taken closest to completing UAS 22. If that information for a particular demographic variable is missing, then information from the My Household survey completed closest to UAS 21 is used; if necessary, then UAS 20. This is done because the HRS surveys are taken sequentially so the My Household survey completed nearest to UAS 22 would contain the most recent information. The exceptions are the variables *rWVwibeg* and *rWVagey_b*, which take the values of the earliest survey completed in a wave.

For information about how demographic information is extracted from the My Household surveys for individuals who do not complete at least one UAS HRS survey in a wave, please see [Section 3.2 Demographic Information](#).

HRS-Derived Demographic Variables

The Comprehensive File also contains demographic variables for Wave 12 through Wave 16 that are derived from the UAS HRS surveys directly rather than from the most recent My Household survey. These include those relating to religion (*rarelig*), veteran status (*ravetrn*), and the highest level of education achieved by each of the respondent's parents (*rafeduc* and *rameduc*), all of which are not part of the My Household survey. Similarly, the marital history demographic variables are derived from UAS HRS surveys. These are (where *WV* represents the UAS HRS Wave number):

- The total number of times the respondent has been married (*rWVmrct*), as well as the number of times divorced (*rWVmdiv*) or widowed (*rWVmwid*) and the number of ended marriages where the respondent did not report what caused the marriage to end (*rWVmend*).
- Whether the respondent has never been married (*rWVmnev*).

- For respondents who have been married at least once, the length in years of the current marriage (*rWVmcurln*), the length in years of the longest marriage (*rWVmlen*), and the number of marriages for which the length is unknown (*rWVmlenm*).

A demographic variable with the prefix *ra* indicates the value of the variable is generally constant over time, such as birth year (*rabyear*). If there are any changes to the value of this type of variable, then the value of the *ra* prefixed variable is updated. Demographic variables with the prefix *rWV* (where *WV* represents the UAS HRS wave number) indicate a larger probability that their values may change over time. Due to the wide range of UAS respondents' age (18 and older), the set of education variables, *rWVeduc*, are considered variables that may possibly change values over time (for example, the value of *r13educ* will be different from *r12educ* for respondents who gain education in between those two waves).

Urbanicity Variable

In addition to the demographic variables that originate in the My Household survey and the UAS HRS surveys, the Comprehensive File includes an urbanicity variable for each available wave. The variable is based on panel members' current census tract of residence and the 2010 Rural-Urban Commuting Area (RUCA) codes released by the US Department of Agriculture's Economic Research Service. To preserve confidentiality, the UAS collapsed the 10 primary RUCA codes to 4 levels: Metropolitan, Micropolitan, Small/Rural, and Unknown. The Metropolitan level corresponds to primary RUCA codes 1-3, the Micropolitan level corresponds to RUCA codes 4-6, and the Small/Rural UAS classification corresponds to RUCA codes 7-10.

For detailed information and definitions of the 10 primary RUCA codes, please visit the [USDA ERS Rural-Urban Commuting Area Codes site](#).

The urbanicity variable name in the Comprehensive File has the form *rWVurbanicity*, where *WV* is each available wave. To reconcile the possibility of respondents changing addresses and moving across urbanicity categories during a wave, the Comprehensive File includes the urbanicity classification based on the location information available at the time the respondent most recently completed a UAS survey in a wave. This is similar to how the My Household based demographic variables are created (see the previous description in [Section 3.1.2](#) and the description in [Section 3.2](#)).

The full list of the demographic variables can be found in [Table A.3](#) of Appendix A.

Survey-specific demographic information (e.g., *r12_uas20mstat* through *r12_uas25mstat*) for most demographic variables can be found in the Component File.

3.1.3 Income and Wealth Variables and Imputation

Household and Individual Level Variables

The Comprehensive File contains variables corresponding to a wide array of respondent and spousal income amounts, as well as housing and non-housing related wealth asset values. Most

income-related variables are reported at the individual level, while all wealth variables are reported at the household level.

Income-related variables contain the values the respondent reported for the last calendar year of the date the survey was taken. For example, if the respondent completed the UAS HRS income survey at any time in 2019, the values given reflect the amount the respondent received for all 12 months of 2018 (the last calendar year from 2019). Wealth-related variables reflect the asset values at the time the survey was taken.

Income and wealth variables included in the current Comprehensive File are from UAS HRS waves 12 through 16. Please see [Table A.1](#) in Appendix A for a full list of all wealth variables included in the Comprehensive File, and [Table A.2](#) for a full list of all income-related variables.

Unlike the core HRS survey, where there is at most one financial respondent per household, in the UAS HRS each respondent has the opportunity to be the financial respondent. Therefore, for households with more than one member participating in the UAS, it is possible for people to provide conflicting information about their household's assets and liabilities, and household members' income amounts. Currently, no information reconciliation process exists for handling households with multiple persons responding to a UAS survey. To compare answers of UAS respondents in the same household, users can examine records with the same *survhhid* for a particular survey. Detailed information about *survhhid* and other standard UAS identification variables can be found in the [UAS standard variables page](#). Included in the Component File are *survhhid* and other variables such as *uasmembers* (i.e., the number of other household members who are also UAS panel members).

Checking/Savings Account Variables Discrepancy

Attention should be given to response differences between the RAND HRS data and the UAS HRS Wave 12 and Wave 14 data for the checking/savings account variables, *h12achck* and *h14achck*. In prior RAND HRS waves (Waves 10, 11, 12), about 23% of respondents reported not owning a checking or savings account, whereas for UAS UAS HRS Wave 12 data this rate was about 42%, and for the UAS HRS Wave 14 data this rate was about 37%.

We investigated reasons for this discrepancy, and determined that the wording of the question was highly likely to be the main factor. We implemented a change in the UAS HRS Wave 13 survey that considerably reduced the percentage of respondents who reported not owning an account (19%). The wording was inadvertently changed back in Wave 14 to the Wave 12 structure and we observed the same discrepancy as we saw in Wave 12 (37% not owned in Wave 14).

Further investigation (Angrisani & Cooper, 2022) determined that splitting up the checking/savings question into two separate questions yielded an ever lower percentage reported of not owning an account:

- a. Do you own any checking or savings accounts?
- b. Do you have any money market funds?

We implemented this two-question approach starting in UAS HRS Wave 15. Since then, for both Wave 15 and Wave 16 the reported percentage of not owning a checking or savings account is about 9%.

Beginning in the May 2025 UAS Comprehensive File, the assignment of ownership for the Wave 15 and Wave 16 checking/savings asset correctly uses respondent data from both questions. Previously, ownership was incorrectly set to missing and imputed if the respondent answered “Do not own” for both parts of the checking/savings and money market questions.

Please use caution when using the Wave 12 and Wave 14 checking/savings account variables (*h12achck*, *h12afchck*, *h14achck*, *h14afchck*) and others using those amounts in their calculations, such as total wealth variables (*hXatota*, *hXatotw*, *hXatotn*, *hXatotf*, *hXatotb*, where X represents either Wave 12 or 14).

Missing Data and Imputation

The UAS HRS follows the core HRS practice of using follow-up brackets in cases where respondents do not provide exact answers questions regarding income, wealth, and certain medical expenses. For example, if a respondent reports owning a house but does not report a value, the survey asks a follow-up question such as if the house is worth more, less, or equal to \$250,000. If the respondent says the value is less, then the survey then asks if the value is more, less, or equal to \$100,000. But if the respondent answered more than \$250,000, then asked is whether the value is more, less, or equal to \$500,000, etc. This is done for a pre-set range of bracket values dependent upon the income or wealth variable being asked. If the respondent answers the follow-up bracket questions until the narrowest pre-set range, it is referred to as a complete bracket. If the respondent does not answer until the final set of brackets, that is an incomplete bracket. If the respondent owns or receives an amount type, yet gives no amount or bracket range information, that is referred to as “no value/no bracket.”

The UAS imputation process for income, wealth, and medical expense measures with missing data is simpler than what is followed by the RAND HRS. (Detailed information about the RAND HRS imputations is available in Section 3 of the [RAND HRS Data Documentation](#).)

After an imputation is completed for a respondent’s specific income amount, asset value, or medical expenditure, we “freeze” that imputation so future releases of the Comprehensive File have the same value for that amount. We do not re-impute the same case for the same income source, asset, or medical expenditure. We also review potential reported outlier values, correcting them when necessary. Please see [Section 3.1.4](#) for more information about the process for outlier corrections.

The income and wealth imputations performed for the Comprehensive File use sample probabilities and random number draws for income and assets that require “ownership/whether receive” imputations and bracket imputations, and use a hot deck draw for amount imputations.

The values of the imputation flag variables in the Comprehensive File have the same meaning as the values in the RAND HRS data file. However, the Comprehensive File imputation flags have additional values corresponding to different types of outlier corrections (98 and 99). Tables 4 and 5 list the possible values for the two main types of imputed variables, component variables, and summary variables. Component variables are amounts that cannot be broken down further, such as wages/salary and the value of a respondent’s home. Summary variables are comprised of component variables, such as total household income and total mortgage amount. Please refer to [Section 3.1.4](#) for information about the additional imputation flag values.

Table 4. Imputation Flag Values for Component Variables

Imputation Flag Value	Value Description	Imputation Needed
0	Respondent not in the survey	None
1	Continuous reported value	None
2	Complete bracket	Amount
3	Incomplete bracket	Bracket, Amount
5	No value/bracket	Bracket, Amount
6	Does not own/receive	None
7	Don’t know whether owns/receives	Ownership, Bracket, Amount
9	No financial respondent	Ownership, Bracket, Amount
98	Outlier: Reported monthly amount set to annual amount	None
99	Outlier: Reported amount set to missing	Bracket, Amount

Table 5. Imputation Flag Values for Summary Variables

Imputation Flag Value	Value Description	Imputation Needed
0	Respondent not in the survey	None
1	No imputations	None
2	Some imputation	Varies
6	No asset/income	None
9	No financial respondent	Ownership, Bracket, Amount

3.1.4 Outlier Identification and Correction

Starting with the February 2018 Comprehensive File release, UAS staff identified very large and possibly inaccurately reported values on income and wealth amounts, and amounts related to medical expenses. In December 2018, this process was extended to include employment history variables related to wage rate. The reason for identifying large outlier values was twofold:

1. A large or inaccurately reported value can strongly influence conclusions drawn from using that observation, as well as influence any summary variable taking the outlier amount into account.
2. During the imputation process, outlier values can serve as donors to other observations that would then inherit the large value, therefore exacerbating the issue of highly influential values with questionable reporting accuracy.

If reported values for specific income, wealth, medical expense, and wage rate variables exceed a certain threshold, they are flagged. Then, UAS staff evaluates the accuracy of each flagged case based upon many other reported values the respondent has provided. A determination is then made to:

1. Keep the reported value in the data as reported.
2. Set the reported value to missing and perform imputations necessary to determine a new value. (Income, wealth, and medical expense items only are imputed; wage rate values are simply set to missing and flagged as outliers.)
3. In the case of some income variables pertaining to monthly amounts, the reported monthly amount is set to the annual amount. This is also an option for the prescription value reported for medical expenditures.

The exception to these steps is that wage rate cases set to missing are not imputed. Similar to the RAND HRS, only those respondents who are in the labor force and unemployed may receive a wage rate imputation value. For respondents who are employed and have a missing reported wage rate, the wage rate variable values remain missing.

To account for cases receiving an outlier correction, the Comprehensive File's existing imputation flag variables have been updated with two new values. For income and wealth variables, a value of 99 indicates the reported amount was set to missing and then imputed to a new value. For income variables where a monthly reported amount was determined to likely be an annual amount, the imputation flag has a value of 98.

For health, two out-of-pocket medical expenditure variables (*r12oopmd* and *r12oopmdo*) are computed as sums of several medical expenditure components. If at least one of the components was determined to be an outlier and set to missing and then imputed, the corresponding imputation flag for that summary variable is set to 99.

For wage rate, if the reported wage amount was identified as an outlier and set to missing, the imputation summary flag variables *r12wgfwk* and *r12wgfhr* have a value of 99. If it is suspected that the reported pay interval is incorrect but the wage amount is accurate, then the pay interval is changed and the case is flagged as an outlier (imputation flag value of 98).

Before each new release of the Comprehensive File, the data is inspected for new potential outliers and processed according to the determination made for each case.

3.1.5 Health Variables

Harmonized health-related variables are included in the file for Waves 12 through 16. They are reported at the individual respondent level. Unlike the RAND HRS, the Comprehensive File has no spousal health variables. This is because no health questions about a spouse/partner are asked in the HRS questionnaire, and the UAS HRS is administered only to respondents who are panel members.

Health variables found in the Comprehensive File cover a wide range of matters such as:

- Current health conditions (arthritis, diabetes, high blood pressure, etc.).
- Characteristics of the respondent (height, weight, BMI, mood, smokes or drinks).
- Information about doctor visits, medical expenses, and any nursing home care.
- Whether the respondent has difficulty performing physical tasks, such as bathing, walking, and eating.
- Cognitive skills, such as self-reported memory changes and ability to name the calendar date.

After the Wave 13 UAS HRS fielding period had concluded, an issue involving the 2016 core HRS Section G functional limitations questions was found by UAS staff. Due to an error in the 2016 core HRS Section G questionnaire, 3 questions were asked to only a subset (about 10-15%) of the UAS respondents who should have been asked these questions. The UAS HRS questions are:

G005: Because of a health problem do you have any difficulty with getting up from a chair after sitting for long periods?

G006: Because of a health problem do you have any difficulty with climbing several flights of stairs without resting?

G007: Because of a health problem do you have any difficulty with climbing one flight of stairs without resting?

As a result, several derived variables in the Comprehensive File were affected. Please use caution when drawing conclusions from the following derived variables:

r13chair—difficulty getting up from chair

r13clims—difficulty with climbing several flights of stairs

r13clim1—difficulty with climbing 1 flight of stairs

This error did not exist in the 2014 core HRS section G questionnaire, therefore the equivalent UAS HRS Wave 12 variables were not affected. Waves after Wave 13 were also not affected.

A full list of the health variables included in the Comprehensive File are in [Table A.4](#) of Appendix A.

3.1.6 Health Insurance Variables

The included harmonized health insurance variables for Waves 12 through 16 contain information on the existence and source of any coverage for each respondent. Similar to the health variables, the Comprehensive File has no spousal health insurance variables.

The topics of the health insurance variables include:

- Whether the respondent is covered by health insurance by his/her employer or a spouse's employer.
- Whether the respondent is covered by a government health insurance plan, such as Medicare, Medicaid, or the Veterans Administration.
- Whether the respondent is covered by health insurance after retirement.
- The number of health insurance plans the respondent has and who is covered by each plan (up to the first three plans).
- Whether the respondent has long-term care insurance and, if so, the type of care.
- Whether the respondent has life insurance.

A full list of the health insurance variables included in the Comprehensive File are in [Table A.5](#) of Appendix A.

3.1.7 Employment History Variables

Harmonized employment history variables are included in the file for Waves 12 through 16. These variables relate to employment at the time of the survey as well as to respondents' previous jobs.

These items include:

- Whether the respondent is currently working, retired, disabled, unemployed, or not in the labor force.
- For employed respondents, information is available pertaining to whether they work full time or part time, whether the respondent has a second job, hours worked per week, whether self-employed, whether the job is physically demanding or stressful, number of employees at the business, tenure at the job, whether the respondent is in a labor union, and the hourly and weekly wage paid to the respondent.
- Several variables relate to previous employment, such as the longest tenure at a previous job, the number of jobs that lasted five or more years, and for respondents who were not working at the time the of the survey, the month and year they were last working.
- Current occupation type (*rWVjcoccc*) and longest tenured job occupation type (*rWVjloccc*), if available. Any reported occupation code data is assigned to one of 23 occupation groups. These occupation groups are based on classifications in the 2010 U.S. Census (updated in 2018). These variables are only available for Waves 12 through 15. Starting in Wave 16, occupation type was no longer asked in the UAS HRS. This is because occupation type questions are now collected in a separate series of UAS surveys. The occupation data from these surveys will be incorporated into the Comprehensive File in a future release.

The wage rate variables are reported in the Comprehensive File in nominal dollars. Wage rate variables are coded as missing for individuals who are out of the labor force or are employed but did not provide sufficient information to calculate an hourly or weekly wage. This includes those respondents who reported a value that was identified as incorrectly reported during the outlier process. If during the outlier process, it is suspected that the reported pay interval is incorrect but the wage amount is accurate, then the pay interval is changed and the case is flagged as an outlier (imputation flag value of 98). For example, if a respondent gives a wage amount of \$100,000 earned weekly, but 3 previous waves of data indicate a reported annual salary of \$100,000, then the pay interval is changed from weekly to annually.

For respondents who are unemployed but in the labor force, wages are computed from the most recent job (if wage information was reported for that job). If this information is from a different year, the amount is adjusted to the current survey year using the Consumer Price Index.

If previous wage information is not available for those who are unemployed but in the labor force, wage is imputed using a regression model with several key demographic predictors. The imputation summary variables for hourly and weekly wage, *r12wgfhr* and *r12wgfwk* (using Wave 12 as an example), represent the situation related to wages for each respondent. Table 6 displays the values and their meanings for the wage summary variables.

Table 6. Imputation Flag Values for Summary Variables for Hourly and Weekly Wage

Imputation Flag Value	Value Description	Imputation Needed
1	Not unemployed, wage not missing	No
2	Unemployed, in labor force, previous job wage information present	Yes (from previous job, adjusted)
3	Unemployed, in labor force, no previous job wage information	Yes (predicted wage from regression)
6	No labor force information, no wage information	No
8	Not in labor force, no wage information	No
9	In labor force, not unemployed, wage information missing	No
98	Outlier: Reported wage amount pay interval set to a different interval (e.g., weekly to annually)	No
99	Outlier: Reported wage amount set to missing	No

Note: These are the possible values for the wage summary variables *rWVwgfhr* and *rWVwgfwk* where *WV* represents all available waves of data.

A full list of the Employment History variables included in the Comprehensive File is provided in [Table A.6](#) of Appendix A.

3.1.8 Retirement Variables

The harmonized retirement variables are included for Waves 12 through 16. They relate to respondents who have completely retired and those who have not. Some variables are specific to each group, while others are asked of all respondents.

For respondents who have completely retired, the Comprehensive File contains information on:

- Satisfaction with retirement
- How retirement life compares to life before retirement
- The month and year of retirement

For respondents who are not completely retired (either partially retired or not at all), the following information is included:

- If working, what year the respondent plans to stop working

- Self-reported probability of how likely it is the respondent will be working at ages 62 and 65. Due to a misinterpretation of the HRS questionnaire that affected the UAS HRS online survey, these variables, *r12work62* and *r12work65*, have missing values for respondents who were working at the time of the interview. This issue has been corrected so that new instances of non-retired respondents taking the UAS HRS surveys will have the opportunity to respond to these questions. Please use caution when drawing conclusions from variables *r12work62* and *r12work65*. This issue does not affect the corresponding *rVVwork62*³ and *rVVwork65* variables from subsequent waves.

Other items included regardless of retirement status are: financial planning horizon length; the probability the respondent will leave behind a bequest; the probability the respondent will move to a nursing home in the next five years (only asked if the respondent's age is 66 or older); and the probability the respondent will live to 75 years old (only asked if respondent is younger than 66 years old).

A full list of the retirement variables included in the Comprehensive File are in [Table A.7](#) of Appendix A.

3.1.9 Pension Variables

Harmonized pension variables are included in the file for Waves 12 through 16. These variables are available for respondents who are currently employed (at the time of the respective survey) and have at least one pension plan at that job (e.g., Wave 12 variable *r12jcpen*), and/or those currently receiving income from at least one pension (e.g., Wave 12 variable *r12peninc*).

For those who are currently employed and have at least one pension plan at that job, the Comprehensive File includes information pertaining to the number of plans as well as the type, employer contribution, respondent contribution, and current pension account balance for a respondent's plans (up to a maximum of four). More specifically, variables related to pension plans at the respondent's current employment include (using Wave 12 variables as an example):

- Whether each owned pension plan is a Defined Benefit (DB) plan, a Defined Contribution (DC) plan, or both (*r12ptyp1-4*).
- For each owned pension plan, the detailed pension plan account type for each owned pension plan. For example, 401(k), 403(b), employee stock ownership, 457 plan, defined benefit plan, and thrift savings plans to name a few (variables *r12ptypd1-4*).
- For each owned pension plan, whether the reported general plan type matches to the reported detailed pension plan. These variables are meant as a consistency check on how well respondents categorize their existing plans (*r12ptypf1-4*).
- For respondents reporting a pension plan with a defined contribution, the following information is included: the percentage of the respondent's pay contributed by the

³ Where *WV* represents the UAS HRS wave number 13 through the current wave.

employer (*r12dcpct1-4*), the annual amount the respondent contributes (*r12dccont1-4*), the employer's annual contribution (*r12dcbene1-4*), and the current balance of each DC plan (*r12dcbal1-4*).

Respondents currently receiving pension income are asked how many pensions they receive income from (*rWVpeni_n*) and what happens to the pension income after the respondent's death (*rWVpenic1-2*) for up to two pensions. Possible responses are the pension payments stop, they remain unchanged, or they continue but at a reduced level (where *WV* represents the UAS HRS Wave number).

A full list of the pension variables included in the Comprehensive File are in [Table A.8](#) of Appendix A.

3.1.10 Family Structure Variables

The harmonized family structure variables relate to characteristics of the respondent's immediate family. The current Comprehensive File contains family structure variables for UAS HRS Waves 12 through 16. These variables include (where *WV* represents the UAS HRS Wave number):

- The number of people living in the household, including the respondent and spouse/partner, if present (*hWVhhres*).
- The number of living brothers (*rWVlivbro*) and sisters (*rWVlvisis*) the respondent has, as well as the total number of living siblings (*rWVlvisib*).
- Whether each of the respondent's parents are alive (*rWVdadliv*, *rWVmomliv*) and the total number of living parents (*rWVlivpar*), as well as the age of each parent (or age at death) at the time of the survey (*rWVdadage*, *rWVmomage*). Also included are variables pertaining to the highest level of education the respondent's parents have achieved (*rafeduc*, *rameduc*).
- The number of children ever born to the respondent (*raevbrn*). Also included is the total number of living children, including step-children, of both the respondent and the respondent's spouse/partner—that is, a sum of all of the respondent's children (biological, adopted, and step) plus all of the spouse/partner's children (biological, adopted, and step) (*hWVchild*).

A full list of the family structure variables included in the Comprehensive File are in [Table A.9](#) of Appendix A.

3.1.11 Social Security Variables

The harmonized Social Security variables provide details about each respondent's previous and current utilization of both the Social Security Disability (SSDI) program and the Supplemental Security Income (SSI) program for UAS HRS Waves 12 through 16.

Episode Variables

Many of the Social Security variables pertain to what is termed an "episode," which refers to respondent information in a given UAS HRS wave about the utilization or application status of either SSDI or SSI, respectively. Therefore, there can be information provided for up to two episodes of Social Security benefits use per wave—one for SSDI and one for SSI.

SSDI and SSI program utilization is currently included in the Comprehensive File for Waves 12 through 16. As a result, there can be anywhere from zero to a maximum of 10 episodes per respondent in the current Comprehensive File. However, in the current version of the Comprehensive File the maximum number of episodes for a respondent is 8. Every subsequent wave captures any changes in use or application status of each program. These episode-level variables, each with a suffix representing the episode number, include:

- The program, SSDI or SSI, that is the focus of each episode (*ratype1-8*)⁴
- The status of each episode (*radstat1-8*). Examples of status include: receiving benefits, stopped receiving benefits, applied, decision appealed, application rejected.
- The date (*radappd1-8*), month (*radappm1-8*), and year (*radappy1-8*) the respondent applied for SSDI or SSI.
- The date (*radendd1-8*), month (*radendm1-8*), and year (*radendy1-8*) SSDI or SSI payments ended.
- The date (*radread1-8*), month (*radream1-8*), and year (*radreay1-8*) the respondent re-applied or appealed for SSDI or SSI.
- The date (*radrecd1-8*), month (*radrecm1-8*), and year (*radrecy1-8*) the respondent first received an SSDI or SSI payment.

Other Social Security Variables

In addition to episode-level variables, the Social Security variables contain information about the total number of SSDI/SSI episodes for each respondent (*radnepi*), and whether the respondent (*rassrecv*) or the respondent's spouse (*sassrecv*) has ever received Social Security benefits from any source (SSDI, SSI, or Social Security retirement). There are also wave-specific variables pertaining to the status of any requested benefits from the SSDI and/or SSI programs (*rWVdstat*⁵), and for respondents that are receiving benefits, the amount received from SSDI last month (*rWVdssamt*) and from SSI last month (*rWVdsiamt*) are included.

⁴ In the current version of the Comprehensive File, eight is the maximum number of reported instances of SSDI/SSI utilization.

⁵ Where *WV* represents the UAS HRS wave number.

A full list of the Social Security variables included in the Comprehensive File are in [Table A.10](#) of Appendix A.

3.2 Non-HRS UAS Survey Data

For the convenience of research and investigative purposes, the Comprehensive File contains data from other core UAS surveys integrated with UAS HRS data. This data is referred to as non-HRS data.

The names and labels for variables in these non-HRS studies are modified, but otherwise this non-HRS data should be considered raw data. Variable labels are modified to indicate topic, wave, and UAS survey number to improve clarity, conciseness, and informativeness. The variables names are also altered to indicate topic and wave, as well as to mark any cross-wave changes in question design. The first letter in each non-HRS variable name denotes the particular topic, while the next two numbers reference the wave. To maintain consistency with the naming structure used for the UAS HRS variables (described in [Section 3.1.1](#)) the number 12 is used to reference the first wave of non-HRS surveys, 13 for the second wave of non-HRS surveys, etc. This variable naming structure is described [below](#) in more detail.

To view the UAS codebook for each non-HRS topic in the Comprehensive File, with background information about each survey, survey response statistics, and a paper version of the questionnaire, please open the [UAS All Surveys page](#). Then choose the UAS survey associated with the topic in which you are interested (e.g., UAS 1 for Wave 12 of Topic P) and select “Survey codebook” under the Metadata heading.

Demographic Information

Some of the demographic information in the Comprehensive File is taken from the My Household survey⁶. The My Household survey is administered quarterly and so it is potentially taken multiple times by respondents during a given wave period.

When possible, each wave's My Household demographic variables are derived from the My Household Survey taken closest in time to that wave's most recently completed UAS HRS survey (e.g., UAS 20-25 for Wave 12). However, for respondents who have not participated in any of a given wave's UAS HRS surveys, the values of My Household demographic variables are derived from the My Household survey taken closest in time to the most recently completed non-HRS survey in a given wave.

As an example, assume a respondent did not complete any Wave 12 UAS HRS surveys, but did complete several of the Wave 12 non-HRS surveys. Also assume that this respondent completed only UAS 1, UAS 2, and UAS 16 out of the Wave 12 non-HRS surveys, and took them in the

⁶ These are demographic variables derived from My Household survey data, as opposed to demographic variables that originate from the UAS HRS survey data.

following order: UAS 16, UAS 1, UAS 2. Here, UAS 2 is the most recently completed non-HRS survey, and so My Household demographic information is used nearest in time to that survey. If demographic information is missing from the My Household survey closest in time to UAS 2, then non-missing My Household survey information nearest to UAS 1 is used, since it was the next most recently completed survey. This is a similar process to what is used for deriving My Household UAS HRS demographic variables, with the difference being that the order in which the non-HRS surveys were completed is not assumed to sequentially follow UAS number (i.e., it is not assumed that a respondent completed UAS 16 after UAS 2 simply because 16 comes after 2 sequentially).

Beginning with the March 2020 Comprehensive File, this process of assigning values to demographic variables associated with respondents who completed only non-HRS surveys in a wave was extended to the age variables (*rWVagey_b* and *rWVagey_e*). The variable *rWVagey_b* represents the respondent age when the first survey of a wave was completed. The variable *rWVagey_e* represents the age of the respondent when he/she last completed a survey of a wave.

Unlike respondents who completed an HRS survey in a wave, for respondents who only completed non-HRS surveys in a wave, the UAS survey completed first and the survey that was completed last in a wave can differ from respondent to respondent.

A number of demographic variables (such as religion and veteran status) are not derived from My Household, but instead from UAS HRS surveys. These HRS-based demographic variables only have values if the respondent completes the pertinent UAS HRS survey (e.g., UAS 20 for religion and veteran status).

Cross-Wave Variable Naming Structure

In general, non-HRS variable names in the Comprehensive File are based on the names used in the raw UAS surveys, with the only difference being the addition of a topic and wave prefix (e.g., "p12"). In this way, when the same question is asked across multiple waves, the only change in the variable name is the wave portion of this prefix. For example, item *q8* from the Topic K "What do People Know" survey is asked first in UAS 16 (Wave 12), and then asked again with no change in question text or answer choices in UAS 94 (Wave 13). In the Comprehensive File, Wave 12 for this item is found in the variable *k12q8*, where "k" indicates Topic K and "12" represents the wave number assigned to first wave surveys. Wave 13 for this item is found in the variable *k13q8*, where "k" indicates Topic K and "13" represents the wave number assigned to second wave surveys.

This naming convention covers most survey items. However, between waves sometimes there were changes in the question text or answer choices or both. Five naming conventions mark these cross-wave changes.

Sometimes, question items are completely new in the most recent wave but share a variable name with a question item from a previous wave. This includes instances where question content was changed so significantly that the item now measures a different construct. For these cases, the change in construct is marked by adding the word "new" plus the wave number in which the content change occurred (e.g., "13") to the prefix. An example is the Topic K item *q6b* found in the UAS 16 (Wave 12) and UAS 94 (Wave 13). These variables, though they have the same name, result from entirely different questions. Thus, they are given the following variable names in the Comprehensive File:

- Wave 12: *k12q6b*
- Wave 13: *k13new13q6b*

Four other changes pertain to when the question item does NOT measure a completely different construct, but there was still a substantial cross-wave change in either in question text, response options, or both.

- ***When there is a cross-wave change in only response options, but question text is unchanged,*** this is marked by adding the suffix "_ans" plus the wave when the change in response options occurred (e.g., "13") to the variable name. An example is the Topic K item *q7b*, which is found in UAS 16 (Wave 12) and UAS 94 (Wave 13):
 - Wave 12: *k12q7b*
 - Wave 13: *k13q7b_ans13*
- ***When there is a cross-wave change in question text (though still measuring the same construct), but no change to response options,*** this is marked by adding the suffix "_que" plus the wave when the change in question text occurred (e.g., "13") to the variable name. An example is the Topic I item *ch048b*, which is found in UAS 16 (Wave 12) and UAS 113 (Wave 13):
 - Wave 12: *i12ch048b*
 - Wave 13: *i13ch048b_que13*
- ***When there is both a cross-wave change in response options and a cross-wave change in question text (though still measuring the same construct).*** this is marked by adding the suffix "_ch" plus the wave when the change in both question text and response options occurred (e.g., "13") to the variable name. An example is the Topic K item *q6a*, which is found in UAS 16 (Wave 12) and UAS 94 (Wave 13):
 - Wave 12: *k12q6a*
 - Wave 13: *k13q6a_ch13*

- *When there is both a cross-wave change in response options and a cross-wave change in question text (though still measuring the same construct, this is marked by adding the suffix “_samp” plus the wave when this occurred. This situation arises when a question, previously asked to all survey respondents, becomes limited to respondents with certain characteristics or based on certain prior responses. Conversely, it can also occur if earlier versions of the survey posed the question to a narrower group, and later versions expanded its scope. In such instances, while responses may still be comparable, they are only so for the subset of respondents who qualify under both versions of the survey. For example, consider the Topic D item "self2" which appears in UAS 322 (Wave 14) and UAS 551 (Wave 15):*
 - Wave 14: d14self2
 - Wave 15: d15self2_samp15

The following subsections describe the different non-HRS topics contained in the Comprehensive File.

3.2.1 Topic P (UAS 1, UAS 121, UAS 237, UAS 458, UAS 593/594) – Financial Literacy; Big Five Personality; Understanding Probabilities; Numeracy; Economic Concerns

Variables in Topic P (Financial Literacy; Big Five Personality; Understanding Probabilities; Numeracy; Economic Concerns) have variable names beginning with the prefix "pWV" where “p” represents Topic P and WV is the wave number. UAS 1 is the Wave 12 survey for Topic P, UAS 121 is the Wave 13 survey for Topic P (as well as the Wave 13 survey for Topic W – see below), UAS 237 is the Wave 14 survey for Topic P, UAS 458 is the Wave 15 survey for Topic P. UAS 594 is the the Wave 16 survey for Topic P’s Numeracy section, while UAS 593 is the Wave 16 survey for the remaining sections of Topic P.

To select all respondents who answered one or more waves of Topic P, set one or more indicator variables *in_p12* through *in_p16* to equal 1.

The timestamp variables associated with Topic P are: *r12_uas1iwbeg*, *r12_uas1iwend*, *r13_uas121iwbeg*, *r13_uas121iwend*, *r14_uas237iwbeg*, *r14_uas237iwend*, *r15_uas458iwbeg*, *r15_uas458iwend*, *r16_uas593iwend*, *r16_uas594iwend*.

A full list of the Topic P variables included in the Comprehensive File is found in [Table B.1](#) of Appendix B.

3.2.2 Topic W (UAS 2, UAS 121, UAS 237, UAS 458, UAS 594) - Satisfaction with Life Domains; Well-being yesterday; Neighborhood quality; Income comparisons; Government Assistance

Variables from in Topic W (Satisfaction with Life Domains; Well-Being Yesterday; Neighborhood Quality; Income Comparisons; Government Assistance) have variable names beginning with the prefix “wWV” where “w” represents Topic W and WV is the wave number. UAS 2 is the Wave 12 survey for Topic W, UAS 121 is the Wave 13 survey for Topic W (as well as the Wave 13 survey

for Topic P – see above), UAS 237 is the Wave 14 survey for Topic W, UAS 458 is the Wave 15 survey for Topic W, and UAS 594 is the Wave 16 survey for Topic W.

To select all respondents who answered one or more waves of Topic W, set one or more indicator variables *in_w12* through *in_w16* to equal 1.

The timestamp variables associated with Topic W are: *r12_uas2iwbeg*, *r12_uas2iwend*, *r13_uas121iwbeg*, *r13_uas121iwend*, *r14_uas237iwbeg*, *r14_uas237iwend*, *r15_uas458iwbeg*, *r15_uas458iwend*, *r16_uas594iwend*.

A full list of the Topic W variables included in the Comprehensive File is located in [Table B.2](#) of Appendix B.

3.2.3 Topic K (UAS 16, UAS 94, UAS 231, UAS 457, UAS 629) – What Do People Know About Social Security

Variables from Topic K (What do people know about Social Security) have variable names beginning with the prefix “k WV ” where “k” represents Topic K and WV is the wave number. UAS 16 is the Wave 12 survey for Topic K (as well as the Wave 12 survey for a few variables in Section I – see below), UAS 94 is the Wave 13 survey for Topic K, UAS 231 is the Wave 14 survey for Topic K, UAS 457 is the Wave 15 survey for Topic K, and UAS 629 is the Wave 16 survey for Topic K.

To select all respondents who answered one or more waves of Topic K, set one or more indicator variables *in_k12* through *in_k16* to equal 1.

The timestamp variables associated with Topic K are: *r12_uas16iwbeg*, *r12_uas16iwend*, *r13_uas94iwbeg*, *r13_uas94iwend*, *r14_uas231iwbeg*, *r14_uas231iwend*, *r15_uas457iwbeg*, *r15_uas457iwend*, *r16_uas629iwend*.

A full list of the Topic K variables included in the Comprehensive File is located in [Table B.3](#).

3.2.4 Topic F (UAS 18, UAS 119, UAS 239, UAS 460, UAS 631) - Financial Services and Decision-Making

Variables from Topic F (Financial Services and Decision Making) have variable names beginning with the prefix “f WV ” where “f” represents Topic F and WV is the wave number. UAS 16 is the Wave 12 survey for Topic F, UAS 119 is the Wave 13 survey for Topic F, UAS 239 is the Wave 14 survey for Topic F, UAS 460 is the Wave 15 survey for Topic F, and UAS 631 is the Wave 16 survey for Topic F.

To select all respondents who answered one or more waves of Topic F, set one or more indicator variables *in_f12* through *in_f16* to equal 1.

The timestamp variables associated with Topic F are: *r12_uas18iwbeg*, *r12_uas18iwend*, *r13_uas119iwbeg*, *r13_uas119iwend*, *r14_uas239iwbeg*, *r14_uas239iwend*, *r15_uas460iwbeg*, *r15_uas460iwend*, *r16_uas631iwend*.

A full list of the Topic F variables included in the Comprehensive File is located in [Table B.4](#).

3.2.5 Topic I (UAS 16, UAS 26, UAS 113, UAS 238, UAS 459, UAS 630) - Ways People Get Information on Retirement and Social Security

Variables from Topic I (Ways people get information on retirement and Social Security) have names beginning with the prefix “iWV” where “i” represents Topic I and WV is the wave number. Thirteen variables from UAS 16 as well as all variables in UAS 26 together make up the Wave 12 survey items for Topic I. UAS 113 is the Wave 13 survey for Topic I, UAS 238 is the Wave 14 survey for Topic I, UAS 459 is the Wave 15 survey for Topic I, and UAS 630 is the Wave 16 survey for Topic I.

To select all respondents who answered one or more waves of Topic I, set one or more indicator variables *in_i12* through *in_i16* to equal 1.

The timestamp variables associated with Topic I are: *r12_uas16iwbeg*, *r12_uas16iwend*, *r12_uas26iwbeg*, *r12_uas26iwend*, *r13_uas113iwbeg*, *r13_uas113iwend*, *r14_uas238iwbeg*, *r14_uas238iwend*, *r15_uas459iwbeg*, *r15_uas459iwend*, *r16_uas630iwend*. There are 2 sets of Wave 12 timestamp variables because variables that comprise Topic I come from two surveys (UAS 16 and UAS 26).

A full list of the Topic I variables included in the Comprehensive File is located in [Table B.5](#).

3.2.6 Topic C (UAS 38, UAS 177, UAS 413, UAS 578) - Subjective numeracy and Consumer Financial Well-Being

Variables from Topic C (Subjective numeracy and Consumer Financial Well-Being) have variable names beginning with the prefix “cWV” where “c” represents Topic C and WV is the wave number. UAS 38 is the Wave 12 survey for Topic C, UAS 177 is the Wave 13 survey for Topic C, UAS 413 is the Wave 14 survey for Topic C and UAS 578 is the Wave 15 survey for Topic C.

To select all respondents who answered one or more waves of Topic C, set one or more indicator variables *in_c12* through *in_c15* to equal 1.

The timestamp variables associated with Topic C are: *r12_uas38iwbeg*, *r12_uas38iwend*, *r13_uas177iwbeg*, *r13_uas177iwend*, *r14_uas413iwbeg*, *r14_uas413iwend*, *r15_uas578iwbeg*, *r15_uas578iwend*.

A full list of the Topic C variables included in the Comprehensive File is located in [Table B.6](#).

3.2.7 Topic N (UAS 42, UAS 83, UAS 292, UAS 483, UAS 642) - Cognitive measures 1 - Numbers

Unique among the studies in the Comprehensive File, waves for the three Woodcock-Johnson cognitive measures (Topics N, V, and A) never close, and new respondents always begin with Wave 12 no matter when they enter the UAS sample. The first survey in Topic N administered to each respondent is always UAS 42, followed by UAS 83, UAS 292, UAS 483 and then UAS 642.

Variables from Topic N (Cognitive measures 1 – Numbers) have variable names beginning with the prefix “nWV” where “n” represents Topic N and WV is the wave number. UAS 42 is the Wave 12 survey for Topic N, UAS 83 is the Wave 13 survey for Topic N, UAS 292 is the Wave 14 survey

for Topic N, UAS 493 is the Wave 15 survey for Topic N, and UAS 642 is the Wave 16 survey for Topic N.

To select all respondents who answered one or more waves of Topic N, set one or more indicator variables *in_n12* through *in_n16* to equal 1.

The timestamp variables associated with Topic N are: *r12_uas42iwbeg*, *r12_uas42iwend*, *r13_uas83iwbeg*, *r13_uas83iwend*, *r14_uas292iwbeg*, *r14_uas292iwend*, *r15_uas483iwbeg*, *r15_uas483iwend*, *r16_uas642iwbeg*, *r16_uas642iwend*.

A full list of the Topic N variables included in the Comprehensive File is located in [Table B.7](#).

3.2.8 Topic V (UAS 43, UAS 84, UAS 293, UAS 484, UAS 643) - Cognitive measures 2 - Picture Vocabulary

Unique among the studies in the Comprehensive File, waves for the three Woodcock-Johnson cognitive measures (Topics N, V, and A) never close, and new respondents always begin with Wave 12 no matter when they enter the UAS sample. The first survey in Topic V administered to each respondent is always UAS 43, followed by UAS 84, UAS 293, UAS 484, and then UAS 643.

Variables from Topic V (Cognitive measures 2 – Picture Vocabulary) have variable names beginning with the prefix “vWV” where “v” represents Topic V and WV is the wave number. UAS 43 is the Wave 12 survey for Topic V, UAS 84 is the Wave 13 survey for Topic V, UAS 293 is the Wave 14 survey for Topic V, UAS 484 is the Wave 15 survey for Topic V, and UAS 643 is the Wave 16 survey for Topic V.

To select all respondents who answered one or more waves of Topic V, set one or more indicator variables *in_v12* through *in_v16* to equal 1.

The timestamp variables associated with Topic V are: *r12_uas43iwbeg*, *r12_uas43iwend*, *r13_uas84iwbeg*, *r13_uas84iwend*, *r14_uas293iwbeg*, *r14_uas293iwend*, *r15_uas484iwbeg*, *r15_uas484iwend*, *r16_uas643iwbeg*, *r16_uas643iwend*.

A full list of the Topic V variables included in the Comprehensive File is located in [Table B.8](#).

3.2.9 Topic A (UAS 44, UAS 85, UAS 294, UAS 485, UAS 644) - Cognitive measures 3 - Verbal Analogies

Unique among the studies in the Comprehensive File, waves for the three Woodcock-Johnson cognitive measures (Topics N, V, and A) never close, and new respondents always begin with Wave 12 no matter when they enter the UAS sample. The first survey in Topic A administered to each respondent is always UAS 44, followed by UAS 85, UAS 294, UAS 485, and then UAS 644.

Variables from Topic A (Cognitive measures 3 – Verbal Analogies) have variable names beginning with the prefix “aWV” where “a” represents Topic A and WV is the wave number. UAS 44 is the Wave 12 survey for Topic A, UAS 85 is the Wave 13 survey for Topic A, UAS 294 is the Wave 14 survey for Topic A, UAS 485 is the Wave 15 survey for Topic A, and UAS 644 is the Wave 16 survey for Topic A.

To select all respondents who answered one or more waves of Topic A, set one or more indicator variables *in_a12* through *in_a16* to equal 1.

The timestamp variables associated with Topic A are: *r12_uas44iwbeg*, *r12_uas44iwend*, *r13_uas85iwbeg*, *r13_uas85iwend*, *r14_uas294iwbeg*, *r14_uas294iwend*, *r15_uas485iwbeg*, *r15_uas485iwend*, *r16_uas644iwbeg*, *r16_uas644iwend*.

A full list of the Topic A variables included in the Comprehensive File is located in [Table B.9](#).

3.2.10 Topic D (UAS 322, UAS 551) - Views and Knowledge about the Social Security Disability Program

Variables from Topic D (Views and Knowledge about the Social Security Disability program) have variable names beginning with the prefix "d." UAS 322 is the Wave 14 survey for Topic D, and Wave 14 variables are prefixed with "d14." UAS 551 is the Wave 15 survey for this topic, and variables are prefixed with "d15." This topic was first introduced in Wave 14 and therefore has no data from Waves 12 - 13. To select all respondents who answered one or more waves Topic D, set the indicator variable *in_d14* through *in_d15* to equal 1.

The timestamp variables associated with Topic D are: *r14_uas322iwbeg*, *r14_uas322iwend*, *r15_uas551iwbeg*, *r15_uas551iwend*.

For UAS 551, there was an error in the question text for *barr1b1_3* during the first few months of fielding. Instead of asking "Do you currently earn \$1,470 or more per month from work?" it had "Do you currently earn \$1470 per month from work?" This was fixed in early September of 2023, and the variable *barr1b1_3_flag* was added to mark which of the two question wordings was used.

A full list of the Topic D variables included in the Comprehensive File is located in [Table B.10](#).

3.2.11 Topic L (UAS 602) – Labor Force and Occupation

Variables from Topic L (Labor Force and Occupation) have variable names beginning with the prefix "l." UAS 602 is the Wave 16 survey for this topic, and variables are prefixed with "l16." This topic was first introduced in Wave 16 and therefore has no data from Waves 12 - 15. There is one wave Topic L in current version of the Comprehensive File.

The timestamp variables associated with Topic L are: *r16_uas602iwbeg*, *r16_uas602iwend*.

A full list of the Topic L variables included in the Comprehensive File is located in [Table B.11](#).

3.2.12 Topic T (UAS 603) - Economic Preferences and Decision-making

Variables from Topic T (Economic Preferences and Decision-making) have variable names beginning with the prefix "t." UAS 603 is the Wave 16 survey for this topic, and variables are prefixed with "t16." This topic was first introduced in Wave 16 and therefore has no data from Waves 12 - 15. There is one wave Topic T in current version of the Comprehensive File.

The timestamp variables associated with Topic T are: *r16_uas603iwbeg*, *r16_uas603iwend*.

A full list of the Topic T variables included in the Comprehensive File is located in [Table B.12](#).

3.2.13 Topic M (UAS 604) – Quality of Life Including Mental and Social Health

Variables from Topic M (Quality of Life Including Mental and Social Health) have variable names beginning with the prefix "m." UAS 604 is the Wave 16 survey for this topic, and variables are prefixed with "m16." This topic was first introduced in Wave 16 and therefore has no data from Waves 12 - 15. There is one wave Topic M in current version of the Comprehensive File.

The timestamp variables associated with Topic M are: *r16_uas604iwbeg*, *r16_uas604iwend*.

A full list of the Topic M variables included in the Comprehensive File is located in [Table B.13](#).

3.2.14 Topic E (UAS 605) – Physical and Social Environment

Variables from Topic E (Physical and Social Environment) have variable names beginning with the prefix "e." UAS 605 is the Wave 16 survey for this topic, and variables are prefixed with "e16." This topic was first introduced in Wave 16 and therefore has no data from Waves 12 - 15. There is one wave Topic E in current version of the Comprehensive File.

The timestamp variables associated with Topic E are: *r16_uas605iwbeg*, *r16_uas605iwend*.

A full list of the Topic E variables included in the Comprehensive File is located in [Table B.14](#)

3.2.15 Non-HRS Derived Variables

Occasionally, variables derived from two or more non-HRS UAS surveys are added to the Comprehensive File. These variables are referred to as "non-HRS derived variables" and are denoted with the prefix *j* in the variable name.

Retirement Preparedness Index

The first of these variables to be included in the Comprehensive File is the retirement preparedness index, *j12rpi*. This variable is derived from raw variables found in UAS 16, UAS 24, and UAS 26. The index is a weighted sum of the following variables: an indicator for having a defined benefit plan (weight \approx 0.16); an indicator for being entitled to IRA assets (weight \approx 0.54), an indicator for owning an IRA (weight \approx 0.52), an indicator for owning enough IRA funds⁷ (weight \approx 0.52), and an indicator for having made no early withdrawals from the IRA (0.24); having made no early cash withdrawals (weight \approx 0.003), the percentage of stock held in IRAs (weight \approx 0.25), and an indicator of whether the percentage of IRAs held as stock is appropriate for the age of the beneficiary (weight \approx 0.16). The weights for these variables were derived using Principal Component Analysis as described in Chard, Rogofsky and Yoong (2017).

Beginning in 2019, the retirement preparedness index for Wave 13, *j13rpi*, is included in the Comprehensive File. This variable is derived from raw data from UAS 94, UAS 99, and UAS 113. In September 2020, *j14rpi* was added to the file (raw data from UAS 231, UAS 189, and UAS 238). In

⁷ See Chard, Rogofsky and Yoong (2017) for an explanation of this variable.

September 2022, *j15rpi* was added to the file (raw data from UAS 400, UAS 457, and UAS 459). In September 2024, *j16rpi* was added to the file (raw data from UAS 629, UAS630, and UAS 534).

3.2.16 Financial Health Scores

UAS surveys 133, 183, 233, 385, 453, 543, and 613 are the first seven annual waves of the U.S. Financial Health Pulse research initiative designed and sponsored by the Financial Health Network. These surveys were conducted in 2018 through 2024, respectively, to assess the financial health of American adults over time.

Survey responses were aggregated to produce financial health sub-scores in the domains of spending, saving, borrowing, and planning, along with a total financial health score that takes all of these components into account. The methodology used to create these scores can be found here: <https://finhealthnetwork.org/tools/financial-health-score/finhealth-score-methodology/>

The Comprehensive File includes the four sub-scores for spending, saving, borrowing, and planning, and the total financial health score. The list of these variables can be found in [Table B.15](#) of Appendix B. The names of the financial health scores based on the U.S. Financial Health Pulse surveys begin with the prefix “qfhn” followed by a wave number, in keeping with the naming structure of the UAS HRS and other Comprehensive File studies, and also the year in which the particular survey was fielded.

Trends reports for the U.S. Financial Health Pulse surveys are available here:

[2018 survey \(UAS 133\)](#)

[2019 survey \(UAS 183\)](#)

[2020 survey \(UAS 233\)](#)

[2021 survey \(UAS 385\)](#)

[2022 survey \(UAS 453\)](#)

[2023 survey \(UAS 543\)](#)

[2024 survey \(UAS 613\)](#)

3.2.17 Elder Index Variables

To enhance research related to older adults and their economic security, the Gerontology Institute at University of Massachusetts Boston (UMB) has created versions of the Elder Index™ to include in the UAS data system. The quintile values representing these indices are included in the UAS Comprehensive File.

The Elder Index™ is a measure of the basic cost of living for older adults in every county of the United States, based on the market cost of housing, food, transportation, health care and other necessities (Mutchler, Shih, Lyu, Bruce, & Gottlieb, 2015). The methodology used in creating the Elder Index™ is based on geographically specific costs that older adult households routinely face,

building on a history of “family budget” research focusing on families with children (see Johnson, Rogers & Tan, 2001). The goal in developing the Elder Index™ was to offer a more realistic benchmark against which economic adequacy in later life may be evaluated. The Elder Index™ is used widely by state governments, NGOs, and in research; it was featured in a report from the Congressional Budget Office as a key indicator of adequacy in retirement (Congressional Budget Office, 2017).

The Elder Index™ measures the cost for an older single person or couple to remain independent without financial support from need-based programs. It measures basic living expenses for older adults who live independently in one- or two-person households. In the Comprehensive File, the variables associated with these household arrangements are listed in [Table B.16](#) of Appendix B.

The Elder Index™ measures living expenses for persons ages 65 and over because this is the age at which Medicare eligibility begins.

The Elder Index™ is calculated based on local costs of basic expenses, including shelter, medical care, food, transportation, and limited miscellaneous expenditures for clothing and household necessities. The embedded expenses reflect average market costs and do not take into account any needs-based subsidies such as SNAP benefits, fuel assistance, or housing subsidies. The Elder Index™ is tabulated separately for older adults living alone, and in two-person households; based on housing tenure (owner with no mortgage, renter, owner with a mortgage); and on health status (excellent, good, poor). The data sources and methodology used to calculate the Elder Index™ is described in detail in Mutchler, Li & Xu (2016).

To preserve respondent confidentiality, for each measure included in the UAS Comprehensive File, the quintile of the specific Elder Index™ is provided instead of the calculated Elder index™ itself. To observe a reference level for these quintile values, please consult [Appendix C](#) of this document, which provides the median Elder Index™ value of each quintile by household type.

The 2019 Elder Index™ and 2020 Elder Index™ were produced by the Gerontology Institute at the University of Massachusetts Boston, and released in November 2019 and May 2021, respectively. County and state-level values of the Elder Index™ are disseminated through <https://elderindex.org/>.

The 2019 Elder Index™ and 2020 Elder Index™ releases included in the current UAS Comprehensive File were produced and made available with generous grant support from RRF Foundation for Aging, The National Council on Aging, The Henry and Marilyn Taub Foundation, The Silver Century Foundation, and Gary and Mary West Foundation. Additional support for the Elder Index™ is provided by the University of Massachusetts Boston.

3.2.18 Cognitive Comprehensive File Variables

Starting with the March 2024 version, the Comprehensive File now includes a subset of variables from a separate UAS Data product, the Cognitive Comprehensive File (CogCF).

The serial seven and word recall tests

The CogCF incorporates a subset of variables collected in the first survey of the series, which is the survey that collects data from sections A - D of the HRS questionnaires.

The `r<w>serialeven` variables (e.g., `r12serialeven`, `r13serialeven`, etc.) contain the number of correct answers in the HRS serial sevens cognitive test. More specifically, they contain the number of correct subtractions within a series of five subtraction questions. The first subtraction question asks respondents to subtract 7 from 100, and then each of the four subsequent questions ask respondents to subtract 7 from their preceding answer.

The word recall test variables `r<w>recall1_score`, `r<w>recall2_score` were collected beginning with Wave 4 of the HRS surveys. In this test respondents are shown a list of ten words and later asked to recall the list at two separate points within the survey. The total number of words remembered at the first and second points are contained in the two score variables,

More about the methodology behind these UAS HRS cognitive assessment variables can be found in the pdf documents "UAS Cognitive Scoring Wave <w>", currently available for download on the Wave 1 - Wave 5 survey webpages (UAS 20, UAS 95, UAS 185, UAS 396, UAS 530) which can be found on the [UAS All Surveys page](#).

The Cognitive Comprehensive File contains a probability of cognitive impairment (PCI) score for use by investigators. This is a summary cognitive status score used for research and should not be interpreted as a clinical diagnosis. The description of the development of the PCI score is available in the publication:

"Gatz, M., Schneider, S., Meijer, E., Darling, J. E., Orriens, B., Liu, Y., & Kapteyn, A. (2022). Identifying cognitive impairment among older participants in a nationally representative internet panel. *The Journals of Gerontology. Series B, Psychological Sciences and Social Sciences*, 78(2):201-209. <https://doi.org/10.1093/geronb/gbac172>"

PCI is a continuous score quantifying the probability of cognitive impairment. It is based on the established Langa-Weir classification used in the Health and Retirement Study, which distinguishes "normal cognition", "cognitively impaired/not demented" and "dementia".

Within the CogCF, the PCI score is derived using a combination of memory tests administered in HRS sections D and G: immediate and delayed recall (`r4recall1_score` and `r4recall2_score`), working memory and attention test (`r4serialeven`), and self-reported ability to manage daily activities that require cognitive health (`r4iadlza`). The memory tests are from UAS396; the self-reported ability scores from UAS397). These are summed (`r4sumscore`) and the PCI score is derived from the scoring crosswalk described in the publication.

Currently the PCI score is available for Study R wave 4 and wave 5. The relevant variables are:

- `r15PCI`: probability of cognitive impairment score based on `r15sumscore` and the scoring crosswalk described in the publication listed above.

- Where r15sumscore is the sum of r4recall1_score, r4recall2_score, r4serialseven and r4iadlza (here r4iadlza summarizes five instrumental activities of daily living (IADLs): shopping for groceries, preparing hot meals, using the phone, managing money, and taking medications).
- r16PCI: probability of cognitive impairment score based on r16sumscore and the scoring crosswalk described in the publication listed above.
- Where r16sumscore is the sum of r5recall1_score, r5recall2_score, r5serialseven and r5iadlza (here r5iadlza summarizes five instrumental activities of daily living (IADLs): shopping for groceries, preparing hot meals, using the phone, managing money, and taking medications).

The following notes and caveats apply:

- The PCI is a summary cognitive status score used for research and should not be interpreted as a clinical diagnosis.
- PCI scores take values within a bounded range from 0 to 1.0.
- Variables r15sumscore and r15PCI are only available for respondents who:
 - completed both UAS396 and UAS397 per variables in_hrs4_uas396 and in_hrs4_uas397 within 90 days
 - have non-missing values for r4recall1_score, r4recall2_score, r4serialseven and r4iadlza
- Variables r16sumscore and r16PCI are only available for respondents who:
 - completed both UAS530 and UAS531 per variables in_hrs4_uas530 and in_hrs4_uas531 within 90 days
 - have non-missing values for r5recall1_score, r5recall2_score, r5serialseven and r5iadlza

The Stop and Go Switch Task (Study G)

In keeping with the HRS wave structure, please note that Wave 1 here corresponds to Wave 14 in the Comprehensive file so variables are renamed accordingly.

Wave 1 of Study G is administered in three surveys: a screener (UAS 323) and two implementations of the Stop and Go Switch Task, with game 1 in UAS 324 and game 2 in UAS 325. The CogCF includes variables from just the first implementation in UAS 324 (except for a handful of cases for which the variables are imputed from UAS 325 per the *g14_imputed* variable). The reason is that UAS 325 was administered to examine device- and practice-effects in an experimental design, not for the purposes of providing cognitive scores for the full UAS panel. Wave 2 (and forward) of Study G is administered in a single survey UAS 488. It conducts the same test as in UAS 324, but allows respondents to use the device of their own choosing.

The task is divided into four different types of trials: baseline, reverse, non-switch, and switch. For each trial type, a respondent's median reaction time (in seconds) is stored in four variables

whose names end the with the text string "score_all": *g14nb_score_all*, *g14rb_score_all*, *g14nsw_score_all*, and *g14sw_score_all*.

However, some respondents perform this task with low accuracy, calling into question whether they completed the task as directed. To account for this, a corresponding set of four variables (*g14nb_score*, *g14rb_score*, *g14nsw_score*, and *g14sw_score*) were derived by starting with the above "score_all" variables and then imputing to missing the values for those respondents who appeared to have exceptionally low task fidelity, that is, those respondents who correctly completed less than 70% of all trials. Thus, these four additional variables contain the median reaction times in each trial type for those respondents who completed the task with at least 70% accuracy.

In the Study G measures, it is lower scores that indicate better (which here means faster) performance. Further description of these and other variables in the Stop and Go Switch Task are found in the survey codebooks (particularly pages 15 - 18), which are available for download on the survey webpage for UAS 324 (Wave 1) [here](#), UAS 488 (Wave 2) [here](#) and UAS 668 (Wave 3) [here](#).

In the Figure Identification Task (Study U)

In keeping with the HRS wave structure, please note that Wave 1 here corresponds to Wave 14 in the Comprehensive file so variables are renamed accordingly.

Wave 1 of Study U is administered in three surveys: a screener (UAS 323) and two implementations of the Figure Identification Task, with game 1 in UAS 327 and game 2 in UAS 328. The Comprehensive File includes variables from just the first implementation in UAS 327 (except for a handful of cases for which the variables are imputed from UAS 328 per the *u14_imputed* variable). Wave 2 (and forward) of Study U is administered in a single survey UAS 489. It conducts the same test as in UAS 327, but allows respondents to use the device of their own choosing.

Wave 1

The task consists of 60 trials where respondents match (with a mouse-click or touchscreen touch) which of five figures is identical to a target figure presented directly above the five-figure array. The 60 trials are split into two sets of 30 trials, with each set analyzed independently, producing two sets of results.

The Comprehensive File includes two "score" variables (*u14figID_score_all*, , *u14figID_score*,) are measures of speed, penalized for incorrect responses. Each of the two variables count the number of figures a respondent correctly identified within a 90 second time window(Responses to single trials that take longer than 30 seconds are considered invalid and removed from all analyses. They do not contribute to score totals, nor do they count against (that is, subtract from) the 90 second time limit). They represent scores for the first 30 trials. The variable with

annex “all” provide scores for all respondents; variables without the “all” annex set the scores to missing for those respondents who failed to produce correct and valid responses for at least 70% of the 30 trials.

For all of these variables, higher scores indicate better performance. Further description of these and other variables in Wave 1 of the Figure Identification Task is found in the survey codebook (particularly pages 15 - 16), which is available for download on the survey webpage for UAS 327 [here](#).

Wave 2 and up

The Wave 2 task consists of 30 trials where respondents match (with a mouse-click or touchscreen touch) which of five figures is identical to a target figure presented directly above the five-figure array. The 30 trials in Wave 2 are a subset of the 60 trials administered in Wave 1 and constitute form 1; the remaining 30 trials from Wave 1 will comprise form 2. Future waves will alternate between form 1 and form 2.

The two "score" variables (*uWfigID_score_all*, *uWfigID_score*) are measures of speed, penalized for incorrect responses. Each of the two variables count the number of figures a respondent correctly identified within a 90 second time window (Responses to single trials that take longer than 30 seconds are considered invalid and removed from all analyses. They do not contribute to score totals, nor do they count against (that is, subtract from) the 90 second time limit). The "score" variable with annex “all” provides the score for all respondents; the variable without the “all” annex set the scores to missing for those respondents who failed to produce correct and valid responses for at least 70% of the 30 trials.

For all of these variables, higher scores indicate better performance. Further description of these and other variables in the Figure Identification Task is found in the survey codebook (particularly pages 15 - 16), which is available for download on the survey webpage for UAS 489 (Wave 2) [here](#) and UAS 669 (Wave 3) [here](#).

For more information, please visit the Cognitive Comprehensive File webpage [here](#).

The full list of Cognitive Comprehensive File variables found in the UAS Comprehensive File can be found in [Table B.18](#).

3.3 Sample Weights

The Comprehensive File includes wave-specific weight variables that allow the sample to be representative of the reference population along several demographic dimensions. These dimensions include gender, race/ethnicity, age, education, household size, and household income as well as census region and urban/rural characteristics of the area of residence. A complete description of the UAS weighting procedure can be found [here](#).

Values used to generate the sample weights are taken from the most recent My Household survey for each respondent, according to the rules described in [Section 3.1.2](#) and [Section 3.2](#).

The data set contains the weight variable (where *WV* is the specific wave, 12 through 16):

- *rWVfinal_weight*: Relative final post-stratification weights ensuring representativeness of the survey sample with respect to the U.S. population 18 years of age or older. These sample weights are non-zero for respondents belonging to the nationally-representative core sample and zero for respondents belonging to special-purpose samples, such as the Native American and Los Angeles County sub-samples.

UAS Survey Info Variables:	
uasid	Individual identifier
uashhid	Original household identifier
in_all	Resp completed at least 1 wave for each of the 12 studies
inmyhh	whether Resp completed MyHH survey (should = 1 for all Rs)
inwave12	w12 R completed at least 1 UAS survey in wave
inwave13	w13 R completed at least 1 UAS survey in wave
inwave14	w14 R completed at least 1 UAS survey in wave
inwave15	w15 R completed at least 1 UAS survey in wave
inwave16	w16 R completed at least 1 UAS survey in wave
inhrs12	w12 Indicates Respondent completed at least 1 Wave 12 UAS HRS survey (UAS20-25)
inhrs13	w13 Indicates Respondent completed at least 1 Wave 13 UAS HRS survey (UAS95-100)
inhrs14	w14 Indicates Respondent completed at least 1 Wave 14 UAS HRS survey (UAS185-190)

inhrs15	w15 Indicates Respondent completed at least 1 Wave 15 UAS HRS survey (UAS396-401
inhrs16	w16 Indicates Respondent completed at least 1 Wave 16 UAS HRS survey (UAS530-535
in_p12	wave 12 whether Respondent completed Comprehensive File Topic P

j15rpi	w15 Retirement Preparedness Index—uses data from UAS 457, 400, and 459
j16rpi	w16 Retirement Preparedness Index—uses data from UAS 629, 630, and 534

Table B.18 Cognitive Comprehensive File Variables in the Comprehensive File

Variable Name	Variable Label
in_g14	whether completed the game 1 surv (UAS 324) of wave 1 of study G
in_g15	whether completed wave 2 of study G (UAS 488)
in_g16	whether completed wave 3 of study G (UAS 668)
r14_uas324iwbeg	w1 uas324:: survey start date
r14_uas324iwend	w1 uas324:: survey end date
r15_uas488iwbeg	w2 uas488:: survey start date
r15_uas488iwend	w2 uas488:: survey end date
r16_uas668iwbeg	w3 uas668:: survey start date
r16_uas668iwend	w3 uas668:: survey end date
g14nb_score	w1 uas324 Stop Go:: normal baseline score (median rt in sec), Rs w >= 70% corct
g15nb_score	w2 uas488 Stop Go:: normal baseline score (median rt in sec), Rs w >= 70% corct
g16nb_score	w3 uas668 Stop Go:: normal baseline score (median rt in sec), Rs w >= 70% corct
g14nb_score_all	w1 uas324 Stop Go:: normal baseline score (median rt in sec), all Rs
g15nb_score_all	w2 uas488 Stop Go:: normal baseline score (median rt in sec), all Rs
g16nb_score_all	w3 uas668 Stop Go:: normal baseline score (median rt in sec), all Rs
g14rb_score	w1 uas324 Stop Go:: reverse baseline score (median rt in sec), Rs w >= 70% corct
g15rb_score	w2 uas488 Stop Go:: reverse baseline score (median rt in sec), Rs w >= 70% corct
g16rb_score	w3 uas668 Stop Go:: reverse baseline score (median rt in sec), Rs w >= 70% corct
g14rb_score_all	w1 uas324 Stop Go:: reverse baseline score (median rt in sec), all Rs
g15rb_score_all	w2 uas488 Stop Go:: reverse baseline score (median rt in sec), all Rs
g16rb_score_all	w3 uas668 Stop Go:: reverse baseline score (median rt in sec), all Rs
g14nsw_score	w1 uas324 Stop Go:: non-switch score (median rt in sec), Rs with >= 70% corct
g15nsw_score	w2 uas488 Stop Go:: non-switch score (median rt in sec), Rs with >= 70% corct
g16nsw_score	w3 uas668 Stop Go:: non-switch score (median rt in sec), Rs with >= 70% corct
g14nsw_score_all	w1 uas324 Stop Go:: non-switch score (median rt in sec), all Rs
g15nsw_score_all	w2 uas488 Stop Go:: non-switch score (median rt in sec), all Rs
g16nsw_score_all	w3 uas668 Stop Go:: non-switch score (median rt in sec), all Rs
g14sw_score	w1 uas324 Stop Go:: switch score (median rt in sec), Rs with >= 70% correct
g15sw_score	w2 uas488 Stop Go:: switch score (median rt in sec), Rs with >= 70% correct
g16sw_score	w3 uas668 Stop Go:: switch score (median rt in sec), Rs with >= 70% correct

g14sw_score_all	w1 uas324 Stop Go:: switch score (median rt in sec), all Rs
g15sw_score_all	w2 uas488 Stop Go:: switch score (median rt in sec), all Rs
g16sw_score_all	w3 uas668 Stop Go:: switch score (median rt in sec), all Rs
in_u14	whether completed the game 1 surv (UAS 327) of wave 1 of study U
in_u15	whether completed wave 2 of study U (UAS 489)
in_u16	whether completed wave 3 of study U (UAS 669)
r14_uas327iwbeg	w1 uas327:: survey start date
r14_uas327iwend	w1 uas327:: survey end date
r15_uas489iwbeg	w2 uas489:: survey start date
r15_uas489iwend	w2 uas489:: survey end date
r16_uas669iwbeg	w3 uas669:: survey start date
r16_uas669iwend	w3 uas669:: survey end date
u14figid_score	w1 uas327 FigID:: score (n of <30 s resp crct in 90 s), w 70% req, 1st 30 items
u15figid_score	w2 uas489 FigID:: score (n of <30 s resp crct in 90 s), w 70% req, form1:30 itms
u16figid_score	Figure ID score 70% Cutoff Met (form 1)
u14figid_score_all	w1 uas327 FigID:: score (n of <30 s resp crct in 90 s), no req, 1st 30 items
u15figid_score_all	w2 uas489 FigID:: score (n of <30 s resp crct in 90 s), no req, form1:30 itms
u16figid_score_all	Figure ID score everyone (form 1)
r15recall1_score	w4 uas396 Word Recall:: ques 1, score (# of words correctly recalled)
r16recall1_score	w5 uas530 Word Recall:: ques 1, score (# of words correctly recalled)
r15recall2_score	w4 uas396 Word Recall:: ques 2, score (# of words correctly recalled)
r16recall2_score	w5 uas530 Word Recall:: ques 2, score (# of words correctly recalled)
r12serialeven	w1 uas20 Serial Sevens Test:: score (# of subtractions correct out of 5)
r13serialeven	w2 uas95 Serial Sevens Test:: score (# of subtractions correct out of 5)
r14serialeven	w3 uas185 Serial Sevens Test:: score (# of subtractions correct out of 5)
r15serialeven	w4 uas396 Serial Sevens Test:: score (# of subtractions correct out of 5)
r16serialeven	w5 uas530 Serial Sevens Test:: score (# of subtractions correct out of 5)
r15sumscore	w4 uas396/397:: sum score of immediate & delayed recall, serial 7s and IADL
r16sumscore	w5 uas530/531:: sum score of immediate & delayed recall, serial 7s and IADL
r15pci	w4 uas396/397:: PCI -- probability of cognitive impairment
r16pci	w5 uas530/531:: PCI -- probability of cognitive impairment

APPENDIX C. ELDER INDEX MEDIAN VALUES BY HOUSEHOLD TYPE AND QUINTILE

Elder Index variable and definition	Variable value and quintile	Median value in quintile
ei2019single_owner_no_mort: Quintile of the 2019 Elder Index assuming singles in good health, homeowner with no mortgage, based on values across all US counties.	1—1 st quintile	\$18,360
	2—2 nd quintile	\$19,296
	3—3 rd quintile	\$20,100
	4—4 th quintile	\$20,928
	5—5 th quintile	\$21,912
ei2019single_owner_mort: Quintile of the 2019 Elder Index assuming singles in good health, homeowner with a mortgage, based on values across all US counties.	1—1 st quintile	\$25,728
	2—2 nd quintile	\$27,108
	3—3 rd quintile	\$28,188
	4—4 th quintile	\$29,412
	5—5 th quintile	\$32,520
ei2019single_renter: Quintile of the 2019 Elder Index assuming singles in good health, renter, based on values across all US counties.	1—1 st quintile	\$20,784
	2—2 nd quintile	\$21,744
	3—3 rd quintile	\$22,380
	4—4 th quintile	\$23,118
	5—5 th quintile	\$25,428
ei2019couple_owner_no_mort: Quintile of the 2019 Elder Index assuming couples in good health, homeowner with no mortgage, based on values across all US counties.	1—1 st quintile	\$29,028
	2—2 nd quintile	\$30,432
	3—3 rd quintile	\$31,668
	4—4 th quintile	\$32,892
	5—5 th quintile	\$34,116
ei2019couple_owner_mort: Quintile of the 2019 Elder Index assuming couples in good health, homeowner with a mortgage, based on values across all US counties.	1—1 st quintile	\$36,624
	2—2 nd quintile	\$38,424
	3—3 rd quintile	\$39,912
	4—4 th quintile	\$41,292
	5—5 th quintile	\$44,472

ei2019couple_renter: Quintile of the 2019 Elder Index assuming couples in good health, renter, based on values across all US counties.	1—1 st quintile	\$31,680
	2—2 nd quintile	\$32,952
	3—3 rd quintile	\$34,164
	4—4 th quintile	\$35,076
	5—5 th quintile	\$37,146
ei2020single_owner_no_mort: Quintile of the 2020 Elder Index assuming singles in good health, homeowner with no mortgage, based on values across all US counties.	1—1 st quintile	\$18,468
	2—2 nd quintile	\$19,608
	3—3 rd quintile	\$20,472
	4—4 th quintile	\$21,288
	5—5 th quintile	\$22,296
ei2020single_owner_mort: Quintile of the 2020 Elder Index assuming singles in good health, homeowner with a mortgage, based on values across all US counties.	1—1 st quintile	\$26,172
	2—2 nd quintile	\$27,600
	3—3 rd quintile	\$28,692
	4—4 th quintile	\$29,964
	5—5 th quintile	\$33,204
ei2020single_renter: Quintile of the 2020 Elder Index assuming singles in good health, renter, based on values across all US counties.	1—1 st quintile	\$21,144
	2—2 nd quintile	\$22,128
	3—3 rd quintile	\$22,776
	4—4 th quintile	\$23,532
	5—5 th quintile	\$25,962
ei2020couple_owner_no_mort: Quintile of the 2020 Elder Index assuming couples in good health, homeowner with no mortgage, based on values across all US counties.	1—1 st quintile	\$29,652
	2—2 nd quintile	\$31,056
	3—3 rd quintile	\$32,340
	4—4 th quintile	\$33,600
	5—5 th quintile	\$34,908

ei2020couple_owner_mort: Quintile of the 2020 Elder Index assuming couples in good health, homeowner with a mortgage, based on values across all US counties.	1—1 st quintile	\$37,344
	2—2 nd quintile	\$39,246
	3—3 rd quintile	\$40,800
	4—4 th quintile	\$42,252
	5—5 th quintile	\$45,450
ei2020couple_renter: Quintile of the 2020 Elder Index assuming couples in good health, renter, based on values across all US counties.	1—1 st quintile	\$32,316
	2—2 nd quintile	\$33,648
	3—3 rd quintile	\$34,920
	4—4 th quintile	\$35,856
	5—5 th quintile	\$38,016
